This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

GOVERNMENT OF THE JOHNS HOPKINS UNIVERSITY

FOR THE YEAR 1906–07.

TRUSTEES

The Trustees are the ultimate source of authority in all matters pertaining to the University. They act collectively, through the standing committees named on page 2, and through the President of the University.

PRESIDENT

Ira Remsen

The duties of this office were thus defined by the Trustees, September 14, 1876.

The President of the University is the authorized means of communication between the Board and the various officers of instruction and administration employed in the University; it shall be his duty to consult with the Professors in respect to the development of their various departments and the general interests of the University; to determine the appropriate duties of the Associates and Fellows; and to exercise such superintendence over the buildings, apparatus, books, and other property as will insure their protection and appropriate use. In respect to these matters and all others which concern the welfare of the University, he shall consult frequently with the Executive Committee, and he shall attend the meetings of the Board of Trustees. Purchases, alterations, repairs, and other incidental expenses must not be ordered by any of the officers of the University without his previous assent, or the expressed authority of the Board.

By resolution of the Trustees, May 2, 1892, the President of the University was constituted a member *ex officio* of the Board, and also *ex officio* a member of the Executive Committee.

ACADEMIC COUNCIL

Ira Remsen (*Pres.*)	E. H. Griffin (*Sec'y*)	J. S. Ames
B. L. Gildersleeve	A. M. Elliott	Maurice Bloomfield
Paul Haupt	Henry Wood	J. W. Bright
W. H. Welch	W. B. Clark	J. M. Baldwin

By authority of the Trustees, the Academic Council (now consisting of the President and eleven Professors) has met since the organization of the University to guide the various departments of study, to select the Fellows, and to act upon such other matters as may be brought before them.

BOARD OF UNIVERSITY STUDIES

JOHNSTON SCHOLARS

The Johnston Scholarships (three in number) were established in 1904 in accordance with the will of Mrs. Harriet Lane Johnston, once a resident of Baltimore, who bequeathed the sum of $90,000, in memory of her husband, Henry E. Johnston, and her sons, Henry E. Johnston, Jr. and James Buchanan Johnston.

When the institution is not named, this university is to be understood. The figures in brackets indicate the tenure of the scholarship. (F) indicates that the person has held a university fellowship here.

Solomon Farley Acree, Ph. D., Assoc. in Chemistry. [1904-06]
Henry Shoemaker Conard, Ph. D., Prof. of Botany and Bacteriology, Iowa Coll. [1904-06]
Isaac Woodbridge Riley, Ph. D., Henry E. Johnston Jr. Scholar. [1904-07]
Ralph Stayner Lillie, Ph. D., James Buchanan Johnston Scholar. [1906-07]
Samuel Grant Oliphant, Ph. D., (F), Henry E. Johnston Scholar. [1906-07]

FELLOWS

ADAM T. BRUCE FELLOWS IN BIOLOGY

The Bruce Fellowship was instituted by a gift of $10,000, made in 1887 by Mrs. Bruce, of New York, to commemorate the name of her son, Adam T. Bruce, Jr., Ph. D., Fellow in Biology, 1883-84, and Instructor, 1886-87.

When the institution is not named, this university is to be understood. The figures in brackets indicate the tenure of the fellowship. (F) indicates that the person has held a university fellowship here.

Henry Van Peters Wilson, Ph. D., (F), Prof. of Biology, Univ. of N. C. [1888-89]
Shozaburo Watase, Ph. D., (F), Prof. of Zoology, Univ. of Tokyo. [1889-90]
Thomas Hunt Morgan, Ph. D., (F), Prof. of Experimental Zoology, Columbia Univ. [1890-91] *Reappointed* 1891, *but resigned.*
Robert Payne Bigelow, Ph. D., (F), Instr. in Biology and Librarian, Mass. Inst. of Technology. [1891-93]
Maynard Mayo Metcalf, Ph. D., (F), Prof. of Zoology, Oberlin Coll. [1893] *Did not enter on the fellowship.*
Ross Granville Harrison, Ph. D., (F), Assoc. Prof. of Anatomy. [1894] *Did not enter on the fellowship.*
Seitaro Goto, S. D., Prof. of Biology, First High School, Tokyo, Japan. [1894-95]
Henry McElderry Knower, Ph. D., (F), Instr. in Anatomy. [1895-96]
George Lefevre, Ph. D., (F), Prof. of Zoology, Univ. of Missouri. [1895-97]
*Franklin Story Conant, Ph. D., (F). [1897] *Did not enter on the fellowship.*
Duncan Starr Johnson, Ph. D., (F), Prof. of Botany. [1897-98]
Gilman Arthur Drew, Ph. D., (F), Prof. of Biol., Univ. of Maine. [1898] *Did not enter on the fellowship.*
Caswell Grave, Ph. D., (F), Assoc. Prof. of Zoology; State Shell-Fish Commissioner, Balt. [1899-01]
Lawrence Edmonds Griffin, Ph. D., (F), Prof. of Biology, Missouri Valley College. [1900]
James Edwin Duerden, Ph. D., Prof. of Zoology, Rhodes Univ. Coll., Cape Colony. [1901-02]
Rheinart Parker Cowles, Ph. D., (F), Asst. in Biology. [1902-04]
David Hilt Tennent, Ph. D., (F), Lecturer in Zoology, Bryn Mawr. [1904] *Did not enter on the fellowship.*
Otto Charles Glaser, Ph. D., (F), Instr. in Zoology, Univ. of Michigan. [1904-05]
Forrest Shreve, Ph. D., (F), Assoc. Prof. of Botany, Woman's Coll., Balt. [1905-06]
Robert Ervin Coker, Ph. D., (F), conducting studies in the marine fisheries of Peru, Lima. [1906] *Did not enter on the fellowship.*

WILLIAM S. RAYNER FELLOWS IN SEMITIC LANGUAGES

The Rayner Fellowship was founded in 1889 by Mrs. Bertha Rayner Frank and Mr. Albert W. Rayner, of Baltimore, to perpetuate in this university the name of their father, Mr. William S. Rayner, who had made unusual attainments in the Hebrew language and was interested in the promotion of Semitic studies. The gift amounted to $10,000.

When the institution is not named, this university is to be understood. The figures in brackets indicate the tenure of the fellowship. (F) indicates that the person has held a university fellowship here.

Libraries

1. The University Library numbers 133,000 bound volumes, selected with special reference to the instruction here given. It is arranged in several collections, of which these are the chief:

General Reference.	Semitic Languages.
Historical and Political.	Sanskrit.
Economics.	Modern Languages.
Mathematical and Physical.	The McCoy Art Library.
Chemical.	Medicine.
Biological.	Physiology and Anatomy.
Geological.	Philosophy and Psychology.
Classical.	

The reference library and reading room is open daily from 9 a. m. to 6 p. m.; the other rooms in accordance with special regulations.

The library receives the publications of the leading scientific societies of the world and the chief literary and scientific periodicals. The whole number of serials received exceeds fifteen hundred. This list is supplemented by those of the Peabody Institute and other institutions, so that the whole number of journals accessible (exclusive of ephemeral publications) exceeds two thousand. Important books are received by the library as soon as published, by purchase or by the courtesy of dealers.

2. The Peabody Library is a choice collection of books purchased since 1866. It is particularly full in academic transactions, long historical series, and costly illustrated books. It numbers 161,000 volumes, well bound, catalogued, and arranged. It is open daily, without charge, from 9 a. m. to 10.30 p. m.

3. The Enoch Pratt Free Library numbers 244,000 volumes and is open daily, without charge.

4. The Maryland Historical Society Library contains 45,000 volumes of historical works and is open daily.

5. Other libraries of Baltimore are the New Mercantile Library (80,000 volumes), the Bar Library (25,000 volumes), the Medical and Chirurgical Library (16,000 volumes), the Maryland Diocesan Library (30,000 volumes).

6. Washington is so near that its museums and libraries may be easily visited. Among the chief institutions of interest to students are these:

The Library of Congress.
The Smithsonian Institution and National Museum.
The Army Medical and Surgical Museum and Library.
The U. S. Coast and Geodetic Survey.
The U. S. Geological Survey.
The U. S. Naval Observatory.
The Libraries of the Departments and Bureaus.
The Corcoran Art Gallery.

DISSERTATIONS FOR THE DEGREE OF DOCTOR OF PHILOSOPHY IN THE JOHNS HOPKINS UNIVERSITY.

REGULATIONS OF THE TREASURER'S OFFICE

I. The Treasurer's Office is open daily from 9 a. m. to 4 p. m.

II. All bills should be presented at that place, endorsed as correct by the person under whose authority the expense has been incurred.

III. No member of the academic staff is allowed to incur a bill in the name of the university, unless authority is given for the same by the Trustees, in advance, either as an item in the annual budget, or as a special appropriation. Blank forms of application are provided for special requisitions.

IV. Orders for books and apparatus to be imported from Europe will not be considered authorized, unless countersigned by the President or the Treasurer of the university.

All goods must be consigned to and addressed "The Johns Hopkins University, Baltimore, Md." Goods for other parties (societies or individuals) must not be included in the university cases. Invoices, sworn to before the U. S. Consul, must be sent by mail, and a duplicate invoice by the following mail, both addressed to The Johns Hopkins University.

Unless otherwise ordered, goods from Europe should be sent as follows:

From Germany by the North German Lloyd steamers sailing for Baltimore from Bremen; from England by steamship lines from Liverpool to Baltimore; from France and Italy, via Havre and Liverpool.

Printed copies of instructions to shippers, which can be obtained at the Treasurer's Office should in all cases be enclosed with the orders.

V. The Treasurer's Office will make purchases, at wholesale rates, of supplies which are required for the current needs of the university.

VI. Such pass books as are authorized by the Treasurer should be presented for balance and settlement every month.

VII. The wages of all persons employed by the university will be paid at the Treasurer's Office.

VIII. When C. O. D. packages are expected, previous arrangements should be made for their reception.

IX. . Outlays made for individuals (express parcels, postage, telegraph messages, etc.) should be settled at once.

X. An annual allowance is made by the Trustees, in the budget, for such expenses as they approve, and in deciding on the items they are governed by a consideration of the general interests of the university, as

well as by the needs of special branches of instruction. Balances to the debit or credit of any account are carried forward to the new account at the opening of each financial year (September 1). A statement of the amount of the balance and of any additional appropriation will be communicated to the parties severally interested, if requested, after the Trustees' meeting in October.

Scientific Societies

1. The Scientific Association, meeting monthly, under the presidency of Professor Ames.
2. The Philological Association, meeting monthly, under the presidency of Professor Gildersleeve.
3. The Historical and Political Science Association, meeting fortnightly.
4. Naturalists' Field Club, which makes weekly excursions during the spring and autumn and holds monthly meetings for the presentation and discussion of papers.

There are also companies which meet weekly in the laboratories for the reading of the scientific journals, and seminaries in several departments of study.

Historical Statement

The Johns Hopkins University was founded by the munificence of a citizen of Baltimore, Johns Hopkins, who bequeathed the most of his large estate for the establishment of a University and a Hospital.

1867, August 24.	Incorporation of the Johns Hopkins University.
1870, June 13.	Organization of the Board of Trustees.
1873, December 24.	Death of the Founder [born May 19, 1795].
1874, February 6.	First Business Meeting of the Trustees.
1874, December 30.	Election of a President of the University.
1876, February 22.	Inauguration of President Gilman.
1876, October 3,	Instruction of students began.
1886, April 26.	Celebration of the Tenth Anniversary.
1889, May 7.	Opening of the Johns Hopkins Hospital.
1893, October 1.	Opening of the Medical Department.
1894, October 1.	Opening of McCoy Hall.
1901, February 22.	Resignation of President Gilman.
1901, June 3.	Election of President Remsen.
1902, February 21, 22.	Celebration of the Twenty-fifth Anniversary.

1902, July 1.	Gift of a Million-Dollar Endowment Fund.

STATEMENTS IN RESPECT TO THE COURSES OF INSTRUCTION

The Johns Hopkins University offers instruction to the following classes of students:

I. UNDER THE FACULTY OF PHILOSOPHY

1. College graduates, who may proceed to the degree of Doctor of Philosophy, or may work for longer or shorter periods in the various seminaries and laboratories without reference to a degree. Women are admitted to graduate courses on the same terms as men.

2. Undergraduate students looking forward to the degree of Bachelor of Arts and following any one of five parallel groups of study.

3. Students who have not taken a degree and are not looking forward to a degree, but who desire to avail themselves of the opportunities here afforded.

II. UNDER THE FACULTY OF MEDICINE

1. Candidates for the degree of Doctor of Medicine, for whom a four years' course is provided. These candidates must be college graduates, or must give evidence, by examination, that they possess attainments indicated by a baccalaureate degree in arts or science. Women are admitted on the same terms as men.

2. Doctors of Medicine desiring to pursue certain special courses, which are annually announced.

I. FACULTY OF PHILOSOPHY

Advanced and graduate students are received whether they are candidates for a degree or not, and they are permitted to attend such lectures and exercises as they may select.

On entering the university they are expected to present their diplomas and certificates from the institutions with which they have been connected, and also letters of introduction. They are not examined by the university for admission, but each instructor satisfies himself of the attainments of those who wish to follow his guidance, before admitting them to his classes.

The professors are free to give personal counsel and instruction to those who seek it; books and instruments adapted to investigation and advanced work have been liberally provided; seminaries limited to a few advanced students have been organized in various subjects; societies devoted to philology, to mathematical, physical, and natural science, and to history and political science, afford opportunities for the presentation of memoirs and original communications, and there are also clubs for the reading and discussion of philological, biological, physical, geological, and chemical papers; during the year courses of lectures are given by resident and non-resident professors on topics to which they have given special attention; the libraries of the Peabody Institute and Maryland Historical Society, founded for the advantage of scholars, are easily accessible; the issuing, under the auspices of the Trustees, of publications devoted to mathematics, chemistry, philology, biology, the modern languages, and history, brings the university into advantageous connection with other foundations; and the university reading room, which is constantly open, is liberally supplied with new and standard books and with the literary and scientific journals of this and other lands.

Instruction is carried on in the different departments by methods which vary with the nature of the subject and the character and proficiency of the scholars; but in all alike the end is the same,—that, while the students are becoming familiar with the work prosecuted and the results attained elsewhere, and are adding to their general intellectual culture, they may be encouraged to become independent and original investigators in their chosen fields of

labor. Within reasonable limits the university will provide such books, apparatus, and material as may be requisite for this purpose.

The principal subjects in which advanced instruction is now provided are these:

Mathematics.	Sanskrit and Comparative Philology.
Physics.	Semitic Languages.
Chemistry.	Anglo-Saxon and English.
Geology and Mineralogy.	Romance Languages.
Zoology.	German.
Botany.	Germanic Philology.
Physiology.	History.
Pathology.	Political Economy.
Greek.	Political Science.
Latin.	Philosophy and Psychology.
Classical Archæology.	

Mathematics

The instruction in Mathematics is under the charge of Professor Morley, with the aid of Dr. Hulburt, Collegiate Professor of Mathematics, Dr. Cohen, Associate, and Dr. Coble, Instructor.

The less advanced subjects are nearly the same every year. The more advanced courses vary from year to year, and are so arranged that a student who remains here two or three years may receive continued and systematic guidance in the main lines of modern mathematical research. The subjects of the advanced courses may be broadly classified as follows:

Theory of Numbers, Theory of Finite Groups, Theory of Transformation Groups, Theory of Invariants.

Higher Plane Curves, Line Geometry, Geometry of Circles and Spheres, General Projective Geometry, Differential Geometry.

Theory of Functions of Real Variables, Theory of Functions of a Complex Variable, Theory of Functions of Two Complex Variables; Elliptic Functions, Elliptic Modular

On entering the university they are expected to present their diplomas and certificates from the institutions with which they have been connected, and also letters of introduction. They are not examined by the university for admission, but each instructor satisfies himself of the attainments of those who wish to follow his guidance, before admitting them to his classes.

The professors are free to give personal counsel and instruction to those who seek it; books and instruments adapted to investigation and advanced work have been liberally provided; seminaries limited to a few advanced students have been organized in various subjects; societies devoted to philology, to mathematical, physical, and natural science, and to history and political science, afford opportunities for the presentation of memoirs and original communications, and there are also clubs for the reading and discussion of philological, biological, physical, geological, and chemical papers; during the year courses of lectures are given by resident and non-resident professors on topics to which they have given special attention; the libraries of the Peabody Institute and Maryland Historical Society, founded for the advantage of scholars, are easily accessible; the issuing, under the auspices of the Trustees, of publications devoted to mathematics, chemistry, philology, biology, the modern languages, and history, brings the university into advantageous connection with other foundations; and the university reading room, which is constantly open, is liberally supplied with new and standard books and with the literary and scientific journals of this and other lands.

Theory of Functions of Real Variables, Theory of Functions of a Complex Variable, Theory of Functions of Two Complex Variables; Elliptic Functions, Elliptic Modular

Functions; General Automorphic Functions, Abelian Functions; Ordinary Differential Equations, Partial Differential Equations; Calculus of Variations.

Kinematics, Theoretical Dynamics, Theory of the Potential, Theory of Probabilities.

The Mathematical Seminary meets weekly.

Undergraduates are annually instructed in Elementary Analytic Geometry, Theory of Equations, Elements of Projective Geometry, Differential and Integral Calculus, Differential Equations, Solid Analytic Geometry.

A large number of mathematical journals are regularly received, besides the publications of learned societies abroad and at home. Among the journals received are the following (the asterisk indicating full sets):

Journal für die reine und angewandte Mathematik* (Crelle); Journal de Mathématiques pures et appliquées* (Liouville); Comptes Rendus; Mathematische Annalen*; Monatshefte für Mathematik and Physik*; L'Intermédiare des Mathématiciens*; Bulletin des Sciences mathématiques*; Journal de l'École Polytechnique; Annales de l'École Normale; American Journal of Mathematics*; Annali di Matematica*; Giornale di Matematica*; Acta Mathematica*; Archiv für Mathematik und Physik* (Grunert); Zeitschrift für Mathematik und Physik*; Proceedings of the London Mathematical Society*; Bulletin of the American Mathematical Society*; Transactions of the American Mathematical Society*; Bulletin de la Société mathématique de France*; Rendiconti del Circolo Matematico di Palermo*; Quarterly Journal of Mathematics*; Messenger of Mathematics; Annals of Mathematics*.

The university has a collection of about two hundred and thirty geometrical models, illustrating the forms of mathematical solids, surfaces, and curves, their singularities and varieties, and the method of descriptive geometry by which they are represented on a plane.

The American Journal of Mathematics, founded by Professor Sylvester, and edited successively by Professor Craig, Professor Newcomb, and Professor Morley, has completed its twenty-eighth volume. Beginning with volume X, there has been published in each volume the portrait of an eminent mathematician. Those so far published, in order of publi-

cation, are as follows: Sylvester, Hermite, Poincaré, Cayley, Klein, Halphen, Lie, Picard, Appell, Fuchs, Darboux, Newcomb, Mittag-Leffler, Salmon, Peirce, Cremona, Noether, Hill, G. Cantor, Hilbert.

Physics

The instruction in Physics is under the charge of Professor Ames, Director of the laboratory, with the aid of Professor Wood, Collegiate Professor Bliss, Associate Professor Whitehead, and several assistants.

The laboratory is a substantial brick building 117 feet long by 71 feet wide, with five stories besides a basement and a sub-basement, and is so situated as to receive light from all sides. Power and heat are furnished from separate buildings.

The physical apparatus includes an equipment for lectures and demonstrations and a valuable collection of instruments for both elementary work and research. Many of these have been made from special designs, others are standard instruments which have been purchased from European and American makers; all of them have been most carefully selected. Special facilities, in some cases almost unique, are afforded those wishing to carry on investigations in electricity and in light.

The physical and mathematical libraries of the university are now placed in McCoy Hall, where they are easily accessible at any time. The physical section contains complete sets of almost all the physical journals published in this country and abroad, and all the standard books of the present and the past. About sixty periodicals, English, French, German, and Italian, are received. Certain magazines and books of reference are retained in the Seminary room of the laboratory, where the advanced students can consult them at any moment. This small collection is especially selected each year with reference to the courses of advanced in-

struction offered that year. Among the magazines kept on file in the laboratory are the following:

Philosophical Magazine, Physical Review, The Astrophysical Journal, Annalen der Physik and Beiblätter, Physikalische Zeitschrift, Journal de Physique, Comptes Rendus, Proceedings and Transactions of the Royal Society of London, the Proceedings of the London Physical Society, L'Éclairage Électrique, and the Electrician (London).

Through the generosity of a former student, a special collection of spectrum-maps and of books and pamphlets dealing with spectroscopy is now being made, and will be kept in the laboratory for the use of students.

Instruction and facilities for work in the laboratory are offered all classes of students, elementary and advanced. The following is a general view of the courses:

Lectures

First Year Course.—This is intended for students who are beginning Physics, or who have not a sufficient knowledge of the principles of the subject to warrant their undertaking more advanced work. To enter this course a student must be able to use logarithms and must have studied plane trigonometry at least through the solution of right-angled triangles. The lectures are accompanied by demonstrations; and mechanics, sound, heat, electricity and magnetism, and light are taken up in succession. Recitations on the subjects treated in the lectures are held regularly, and the course continues three hours weekly, through the year. Along with the lectures the student does work in the laboratory, performing a few simple quantitative experiments, which illustrate the facts and principles considered in the class-room.

Second and Third Year Courses.—These are divided into two sections: one following Mechanics, Acoustics and Electricity, the other Heat and Light. The former is more mathematical than the latter, and serves as an introduction to mathematical-physics. These are designed to meet the needs of students who have already taken either the first year's course, or its equivalent, and who wish to pursue fur-

ther their physical studies. A working knowledge of analytic geometry and calculus is required for admission to them. The lectures take up both the descriptive and the mathematical side of the subject. Recitations are held regularly, and the courses continue through the year, each requiring three hours weekly.

Advanced Work.—For the instruction of those students who have the necessary preparation, certain lectures are given in Mathematical Physics. There is one course, continuing through three years, which includes Mechanics, Hydrodynamics, Sound, Thermodynamics, Heat Conduction, Physical Optics, Electricity and Magnetism. A second course of lectures is given, in which different subjects are treated in different years. During the year 1906-07 the topic was Physical Optics.

These lectures develop the mathematical theory of the subjects, and to follow them the student should have a satisfactory knowledge of differential equations and analytic geometry of three dimensions. Authors like Lord Kelvin, Lord Rayleigh, Maxwell, von Helmholtz, and Poincaré are referred to continually, and the ability to read French and German is absolutely necessary.

Other lectures are given on such subjects as the Kinetic Theory of Gases, Radio-Activity, Conduction of Electricity by Gases, Photography, etc. These are brief courses and vary from year to year.

There are also courses of instruction, both theoretical and practical, in Applied Electricity. They are intended for graduate students only.

A course of lectures is also given in Astro-Physics, which is accompanied by regular work with the spectroscope and in the observatory.

Journal Meetings and Seminary

The advanced students meet with the instructors once a week for the discussion of the current physical journals. Carefully prepared reports on various articles are here presented.

The Physical Seminary, to which only the most advanced students are admitted, meets once each week. The work of the Seminary consists of two distinct exercises: one is the reading of some physical treatise and a consideration of the problems suggested by it; the other is the presentation of critical papers upon various assigned topics in connection with the courses of lectures.

Laboratory Work

An effort is made to render the laboratory as useful as possible to advanced students and investigators. Those who are prepared for such work, will have the facilities which it affords placed most freely at their disposal, and will receive all possible assistance.

Regular courses of instruction are arranged for undergraduate students and for others who need them.

Chemistry

The instruction in Chemistry is under the charge of President Remsen, Director of the Laboratory, and Professor Morse, Adjunct Director, with the co-operation of Professors Renouf and Jones, Associate Professor Acree, and Dr. Gilpin, Associate.

The higher or graduate work is based upon that given in the four years' undergraduate course, and those graduates of other colleges who have not followed courses equivalent to this, begin with that part of the undergraduate work which appears best suited to their needs. The following outline of the work will give some idea of its character.

UNDERGRADUATE COURSES

Professor Renouf and Dr. Gilpin.

Courses are offered for four years. Each course except that for the fourth year consists of three lectures or reviews and six hours of laboratory work weekly, under the guidance of Professor Renouf, Dr. Gilpin, and assistants.

The courses of the first three years are required courses for those students who intend to study medicine or chemistry as a profession. The fourth year course is an elective one for students of chemistry.

First Year.—I. Lectures by Professor Renouf. The ground covered is approximately that laid down in Remsen's "Introduction to the Study of Chemistry." Toward the close of the year about twelve lectures on organic chemistry are given.

II. The laboratory work consists of the experiments described in the text book and simple quantitative analysis.

Second Year.—I. Lectures by Dr. Gilpin. Advanced inorganic chemistry, including physical chemistry.

II. Laboratory work. Qualitative analysis and inorganic preparations.

Third Year.—I. Lectures by Dr. Gilpin. Organic chemistry.

II. Laboratory work. Organic preparations and simple organic analysis.

Fourth Year.—Laboratory work under Professor Renouf and Dr. Gilpin. This course is an elective, offered to students in their fourth year. The work is arranged to meet individual needs.

GRADUATE COURSES

Professor Remsen, Professor Morse, Professor Renouf, Professor Jones, and Associate Professor Acree.

I. Weekly journal meetings, conducted by Professor Remsen.

II. Three times weekly and extending over two years, a course of lectures on organic chemistry, by Professor Remsen.

III. Twice weekly and extending over two years, a course of lectures, by Professor Morse, on inorganic chemistry.

IV. Three lectures a week throughout the year on physical chemistry, by Professor Jones.

V. A short course of lectures on the electrical nature of matter and Radioactivity, by Professor Jones.

VI. A course of twenty lectures by Associate Professor Acree, on physico-organic chemistry.

VII. Laboratory work: (*a*) Qualitative analysis and inorganic preparations under the direction of Professor Renouf. (*b*). Quantitative chemistry under the direction of Professor Morse. About one year is allotted to this work, and the course is so planned as to give the student familiarity with the greatest practicable variety of quantitative operations. (*c*) A course of physical-chemical measurements lasting about two months, under the direction of Professor Jones. (*d*). A course in the preparation of organic compounds, under the supervision of Professor Remsen and Associate Professor Acree. The work in this direction usually occupies about three months, and has for its object a study of the more important reactions of organic chemistry. (*e*). The original investigation of problems assigned by members of the teaching staff, the results of which—if they are found to have a substantial value for the science—may be used in the preparation of the dissertation for the doctor's degree.

As regards the time required by a graduate student to complete the work for the degree of Doctor of Philosophy, it can only be said that one who has the necessary qualifications can generally do it in three years, after following such a course as that given to the undergraduates of this university who take a three-years' course in chemistry. Those who have not had this preparation will generally require a longer time. There are no stereotyped courses leading to the higher degree, and it is impossible to say exactly what must be accomplished to attain it. What is desired is a certain maturity of mind with reference to the science of chemistry, and an ability to deal with chemical problems intelligently. This condition of mind is reached, if reached at all, by long-continued laboratory training accompanied by careful study of chemical journals and treatises. It is believed that whatever object the student may have in view, whether he intends to teach or to follow some branch of applied chemistry, the best preparation he can have is a thorough training in the pure science.

The American Chemical Journal, edited by Professor Remsen, is now in its thirty-seventh volume.

Geology

The instruction in Geology is under the direction of Professor Clark, assisted by Professors Reid and Mathews, Dr. Fassig, Dr. Swartz, and Mr. Berry.

The courses are offered to both graduate and undergraduate students and consist of lectures, laboratory and field work, and conferences upon topics of current literature.

I. Descriptive Mineralogy and Physiography.—This course includes an elementary presentation of crystallography followed by a discussion of the more important economic and rock-forming minerals. Emphasis is laid upon laboratory work which includes the study of crystal models and minerals together with the identification of minerals by means of the blowpipe. This part is open to students who have taken chemistry.

The latter part of this course includes a discussion of the important features of the surface of the earth and the consideration of the forces by which they have been produced. It is illustrated by maps, charts, and lantern views. Illustrative material is studied in the laboratory. Frequent excursions are made to neighboring points of interest where the principles of the science are illustrated in the field. Part II may be pursued independently of Part I.

II. Physical and Historical Geology.—This course is a continuation of the preceding. It comprises the study of seas, lakes, and the interior forces of the earth, including volcanoes, earthquakes, and mountain-making, together with a general discussion of historical geology. The laboratory work includes the study of the common rocks and the explanation of forms of life of the chief geological periods collected by the student. Excursions are made in the fall and spring to points of particular interest for geological study. This course is illustrated by charts, maps, lantern views, and the abundant collections possessed by the university. A knowledge of Geology I, though desirable, is not necessary for the pursuit of this course.

III. Applied Geology.—This course is devoted to a discussion of the non-metallic minerals and rocks which are worked commercially. The knowledge of geology and mineralogy gained in the preceding courses is applied to the recognition of useful minerals, their mode of occurrence, properties, values, and uses. The main sources of coal, oil, clay, building-stones, abrasives, gems, etc.; the way they are won and their economic importance are treated with more or less detail. The aim of the course is to supply such information regarding natural resources as an educated man should possess. The treatment of the technical questions of metallurgy or mining must be sought in technical schools.

IV. Paleozoology.—Attention is given both to the biological and to the geological relations of the important types of the animal kingdom, the phylogenetic history of the leading groups being traced in detail wherever possible.

V. Paleobotany.—Fossil plants will be considered from both a geological and a biological viewpoint. The course will comprise a study of the development of the successive floras throughout geological time and the comparative morphology and phylogeny of the principal plant types. This course is especially adapted to students in botany.

VI. Historical Geology.—In this course the classification and distribution of the sedimentary rocks are fully considered. The value of fossils in the determination of horizons is explained, and a detailed study made of the geological literature of the different countries of the globe.

[Courses IV and VI may be given in alternate years, if thought desirable.]

VII. Economic Geology.—This course deals with the various theories regarding the genesis of ores and other economic products, and a description of the most important mining districts.

VIII. Geological Physics.—In this course the methods of determining the size and shape of the earth; the cause of its present shape; the distribution of internal temperature; the magnetic conditions; the bearing of geological, physical,

and astronomical phenomena on the question of the rigidity of the earth; the theory of isostasy; the age of the earth; the tides; the cause of the ice-age, etc., are discussed; also, geological phenomena, which depend directly upon physical principles, such as volcanoes, earthquakes, geysers, the flow of rivers and of glaciers, the production of folds, faults, etc., will be treated.

IX. Exploratory and Geological Surveying.—The simple methods of determining geographical position; the methods of rapid route-surveying; the use of the plane-table, the camera, etc., are considered, with especial reference to travelers and explorers. The principles of map projection will be explained.

X. Geological Field Methods.—This course consists in an application of the principles by actual work in the field. Definite problems involving the mapping of areal distribution, construction of vertical and columnar sections, interpretation of structure and geological history are assigned each student, under the immediate supervision of the instructor.

XI. Advanced Mineralogy.—This course is intended to be a continuation of the undergraduate courses in mineralogy and a preparation for work in petrography. The lectures include a discussion of optics as applied to the determination of crystals, the determination of minerals in thin sections, special attention being given to the physical-chemical properties of minerals and to their behavior as constituents of rock masses.

XII. Petrography.—This course includes a discussion of methods and a description of the structures and physical properties of rocks. The second portion of the course will be devoted to the special petrography of the igneous rocks, including a study of their various classifications, and a discussion of their origin, distribution, and literature.

[Courses XI and XII may be given in alternate years if thought desirable.]

XIII. Petrography (special topics).—Courses in special

topics such as the metamorphism of rocks, physical petrography, and allied subjects, are given to such students as are qualified to take them.

XIV. Meteorology.—In this course the topics chiefly considered are: Heat and its distribution over the earth's surface; rainfall and evaporation—their distribution and effects; winds and storms; weather sequences as illustrated by the daily weather charts of the U. S. Weather Bureau; extent to which topography influences the distribution of the climatic elements; variability of climates; organization and methods in statistical meteorology.

Special Lectures.—Courses of lectures by non-resident lecturers who are recognized authorities on their special subjects are given each year. Such lectures have included the subjects of physiography, ore deposits, meteorology, terrestrial magnetism, etc.

Laboratory Work.—Laboratory courses are arranged to accompany the lectures, while advanced or special students will be given the opportunity to carry on more extended investigations upon either described or new materials.

Conferences and Student Lectures.—In order that the advanced students may be kept in touch with the most recent investigations in the science, weekly conferences are held at which the leading journals in geology are reviewed by the students under the direction of the instructors.

In order that the advanced students may also have the experience necessary for the successful preparation and delivery of class-room lectures, a course upon some phase of geology is arranged, a special topic being assigned to each student.

Field Work.—The area of the State of Maryland includes, notwithstanding its comparatively small size, a remarkable sequence of geological formations. The ancient rocks of the earth's crust, as well as those still in the process of deposition, are found, while between these wide limits there

is hardly a geological epoch which is not represented. As a result most excellent facilities are afforded for a study of the various geological horizons. Excursions to points of interest are made during the autumn and spring months.

Geological Laboratory and Library.—The geological laboratory is situated in Hopkins Hall, and comprises over thirty rooms, large and small. Here are placed the library, apparatus, and collections which are accessible to the student daily from 9 a. m. to 5 p. m.

In accordance with the custom of the university, those books relating to the work of the geological department are given into its charge, the books of general reference being retained in the university library. The geological library contains most of the journals and works of reference upon geological subjects. It consists of over 7,000 bound volumes and over 10,000 unbound volumes and pamphlets, and it now receives more than 200 current serials.

In addition to the libraries of the university, the Peabody Library, rich in geological works, is available for the use of students, while books not obtainable in Baltimore may be consulted in the libraries of Washington.

Apparatus and Collections.—The collections of the department consist primarily of a large amount of important material brought together from Maryland and adjacent States. It represents all the horizons of the State, being especially rich in crystalline rocks and in Cretaceous and Tertiary fossils. Some of this material has been described, while much awaits further study. Among the most important of the special collections are the Williams, Lewis, Krantz, Hill, Stürtz, Lehmann, and Allen collections.

State Scientific Bureaus connected with the Department.—Two scientific bureaus, established by the Legislature and maintained at the expense of the State, are carried on in connection with the geological department. They are the Maryland Geological and Economic Survey and the Maryland

State Weather Service. Professor Clark is the Director of both these organizations, which are concerned with a study of the geology and physical features of the State of Maryland. The work is carried on under his direction mainly by the instructors and students of the department. A State Forestry Bureau of which Professor Clark is Executive Officer has also been recently established.

Advantages Afforded by Proximity to Washington.— Washington is less than an hour distant from Baltimore. This renders it possible to take frequent advantage of the facilities afforded by that city, where the officers of the various scientific bureaus and societies give the students of the university every opportunity to examine the rich collections and libraries under their control.

Zoology and Botany

The work in Zoology and Botany is directed by Dr. W. K. Brooks, Professor of Zoology, assisted by Dr. D. S. Johnson, Professor of Botany, Dr. H. S. Jennings, Professor of Experimental Zoology, Dr. E. A. Andrews, Associate Professor of Biology, and assistants.

Advanced Zoology: Professors Brooks and Jennings and Associate Professor Andrews.

This course is designed for students who wish to devote themselves to zoology, and for those who select zoology as the chief subject for the degree of Doctor of Philosophy. The work is as follows:

(1). Laboratory work throughout the year. The student is required to verify the results of certain zoological memoirs, which are selected in order to illustrate the application of technical methods, as well as scientific principles, and, also, to study the collateral literature. After he has completed this work, the student is allowed more freedom in the selection of subjects.

(2). Two lectures a week by Professor Brooks on Theoretical Zoology, from October 1 to May 1.

(3). The Behavior of Animals, by Professor Jennings, three times a week, first half-year.

(4). Zoological Seminary, once a week in January and February. The work of the Seminary for the past year was based upon Brooks's Foundations of Zoology.

(5). Zoological and Botanical Journal Club, weekly throughout the year: Professors Brooks, Johnson, and Jennings, and Associate Professor Andrews. All graduate students, assistants, and instructors are expected to take part in the meetings of the journal club, and to report upon the current literature of assigned topics.

Elementary Zoology and Botany: Professors Brooks, Johnson, and Jennings, and Dr. Cowles.

The work is as follows:

(1). Two afternoons of work in the laboratory, throughout the year, in experimental zoology and in botany.

(2). Three lectures a week, from the beginning of the year to February 1, on experimental zoology, by Professor Jennings.

(3). Three lectures a week, from February 1 to the end of the year, on elementary botany, by Professor Johnson.

The work in experimental zoology comprises the study of the methods and mechanisms by which the activities of organisms are brought about, and the influence of the environment upon the organism considered in illustration of the reciprocal interaction between the environment and the organism. The work in botany comprises the study of the gross anatomy and histology and the systematic botany of selected flowering plants.

(4). Three lectures a week, with five hours of laboratory work, on Comparative Anatomy, by Professor Brooks and Dr. Cowles.

The work consists of the study of selected types, chiefly Vertebrates, and an introduction to the systematic zoology

of Vertebrates, with lectures on the principles of animal morphology.

Courses 1, 2, and 3, or 1, 2, and 4, with laboratory work five hours a week through the year, constitute a "major course" and may be offered as a subordinate subject for the degree of Doctor of Philosophy.

Introductory Course in Biology: Associate Professor Andrews and assistants.

This course, consisting of three lectures and six hours of laboratory work weekly throughout the year, is designed as part of the general education of every college student, and is open to all candidates for the A. B. degree, as well as to special students. It is regarded as essential to all students intending to take up the study of medicine, and it (or an equivalent) is required for admission to the medical department. This course may be taken without previous courses in physics and chemistry, but preparatory training of this character is strongly recommended. It is chiefly a laboratory course of two afternoons a week throughout the year, supplemented by three hours a week of lectures, recitations, and exercises designed to emphasize the more essential truths of biology. In the laboratory, each student studies with the microscope, or dissects, selected plants and animals, from the simpler, such as amoeba and yeast, to the complex, such as the fern, the frog, the flowering plant, and the rat, and the embryology of the fowl. This course may be offered as a subordinate subject for the degree of Doctor of Philosophy.

Natural History, by Associate Professors Andrews and Grave. Three lectures and six hours in the laboratory, February 1 to the end of the year.

Advanced Botany: Professor Johnson.

(1). Morphology of Plants. Two lectures and two laboratory exercises a week, throughout the year.

(2). Physiology and Histology of Plants. Two lectures and two afternoons in the laboratory from October 1 to January 1.

(3). Botanical Seminary, twice weekly through the winter term. Goebel's Organography of Plants formed the basis for the seminary work during 1906-07.

(4). Field trips weekly in fall and spring.

Courses 1, 2, and 3, with laboratory work five hours a week throughout the year, constitute a "major course" and may be offered as a subordinate subject for the degree of Doctor of Philosophy.

Students of Botany have access to the extensive herbarium and valuable library of Captain J. Donnell Smith, the Schimper herbarium, the Fitzgerald collection of mosses, the local collections of the Naturalists' Field Club, and the collection of Cryptogams of the late Dr. Humphrey, through the courtesy of the Woman's College of Baltimore.

The studies which are carried on in the biological laboratory are supplemented by work in the field and at suitable points upon the sea-shore.

One of the university fellowships is usually awarded each year to a graduate student in zoology, and, in the selection of the Adam T. Bruce Fellow, preference is given to those who have held university fellowships in zoology.

One of the graduate students in zoology may be appointed each year to occupy, during the summer months, the university table at the laboratory of the United States Fish Commission at Wood's Holl.

Whenever researches, or parts of researches, which have been carried on in the laboratory, are completed and ready for publication, the University Circular provides for the prompt publication of abstracts of the results.

Students looking forward to the degree of Doctor of Philosophy may offer zoology or botany as a principal or as a subordinate subject. If they have not already pursued studies equivalent to the undergraduate courses in this laboratory, they will be required to take these courses.

Physiology

The work in Physiology is directed by Professor W. H. Howell, assisted by Dr. P. M. Dawson, Associate Professor of Physiology, Dr. J. A. E. Eyster, Instructor, and Dr. D. R. Hooker, Assistant. The laboratory is contained in one of the buildings of the medical department adjoining the hospital, and is well equipped with facilities for demonstrations and special investigations. A course of lectures covering the general and special physiology of the animal body is given each year and is illustrated by a large number of class demonstrations. In connection with this series of lectures, a laboratory course in experimental physiology is offered, extending over a period of twelve weeks and giving the student an introduction to the methods of laboratory technique. A duplicate course, consisting of lectures and laboratory work, is arranged especially to suit the convenience of graduate students in the philosophical department. This course is given in the afternoons from January to June. The general course of lectures is supplemented by advanced lectures given from time to time upon selected topics; by the work of the physiological seminary, which meets at stated intervals for the special study of certain parts of physiology; and by a weekly journal club intended for the presentation and discussion of the material contained in the current periodicals. The details of these courses are given in the programme published each year in the University Circular.

In addition to the physiological literature contained in the library belonging to the laboratory, publications upon physiology and the related scientific branches of medicine may be obtained conveniently from the libraries of the Medical Department, the Medical and Chirurgical Faculty of Maryland, and the Surgeon General's Office in Washington.

Students looking forward to the degree of Doctor of Philosophy may offer Animal Physiology as a principal or as a subordinate subject. Those who take physiology as a prin-

cipal subject must present evidence of previous training in physics equivalent to the first year undergraduate course in this university, and in chemistry and in biology equivalent to the first and second year undergraduate courses. No preliminary requirements are made for those offering Physiology as a subordinate subject.

The laboratory is open also to special students, graduates in medicine and others, who may wish to undertake laboratory investigations, or who desire to become acquainted with the use of physiological apparatus and the methods of demonstration and research.

Greek

The graduate instruction in Greek is directed by Professor Gildersleeve, in connection with the Greek Seminary, which consists of the Director, Fellows, and Scholars, and such advanced students as have satisfied the Director of their fitness for an active participation in the work. All graduate students, however, may have the privilege of attending the Seminary exercises.

Each regular member is required to take his turn in the work of the Seminary, and special fields of research are assigned according to progress or bent.

The cycle which has been followed for a number of years is made up of the Attic Orators, Plato, Aristophanes, and the Greek Historians. For example:

1903–1904.	Greek Historiography.	1905–1906.	Plato.
1904–1905.	Attic Orators.	1906–1907.	Aristophanes.

The methods followed have been described in successive annual reports, which may readily be consulted.

The work in the Seminary during the present year was concentrated on Aristophanes; for the next year the centre of work will be transferred to Greek Historiography.

In addition to the work of the Seminary (two meetings a week), courses of lectures are given by the Director, by Associate Professor Miller, and by other qualified persons.

Undergraduate students who select the classical group of studies, are required to follow the class-work in Greek, three hours weekly through four years. The texts vary from year to year, including selections from poets, historians, and orators. Exercises in Greek composition and in reading at sight are likewise required. To extend the acquaintance of the student with Greek literature, he is obliged to read by himself certain prescribed authors, and to pass an examination upon them. An elective course of three hours a week may also be provided. The instruction of the undergraduates in Greek is conducted by Associate Professors Spieker and Miller.

The American Journal of Philology, edited by Professor Gildersleeve, has completed its twenty-seventh volume.

Latin

Instruction in Latin is given on a plan similar to that followed in the courses in Greek. The advanced work proceeds through the organization of a Seminary, of which Professor Smith is the Director. The instruction has two distinct ends in view. It aims, first, to give students a wider and more accurate knowledge of the Latin language and literature than can be secured in the ordinary college course, so that they may become more efficient teachers; and, secondly, to train them in the methods of scientific research, so that they may become independent investigators. The most important instrument of training is the Latin Seminary, which meets twice a week. Each year some author or group of authors in a given department of literature is made the centre of work. Critical methods are taught, interpretations are prepared by members of the Seminary in turn, and papers are read by them containing the results of

various special investigations suggested by the taste and proficiency of each. The subjects treated during the last four years are as follows:

1903–1904. The Roman Satire, especially Horace and Juvenal.
1904–1905. The Roman Historians, especially Livy and Tacitus.
1905–1906. The Roman Epic, especially Vergil.
1906–1907. The Roman Drama, especially Plautus and Terence.

Courses of lectures are also regularly given by the Director of the Seminary and from time to time by other qualified persons.

For example in 1906-07, Professor Smith lectured on the Roman Comedy once a week throughout the year. During the first half-year he also lectured once a week on the development of Latin Syntax, and once a week on topics concerned with the Roman Theatre. During the second half-year he gave sixteen lectures on the Roman Tragic Poets, and devoted one hour a week to the interpretation and discussion of selected elegies of Propertius and Ovid.

Once a week throughout the year Mr. Ogle met the advanced students for rapid reading of Plautus, Terence, and the Tragedies of Seneca.

The undergraduate courses are so arranged that four consecutive years of instruction are open to students of Group I. Elective courses also are offered, which may be taken concurrently with the regular class-work of the third and fourth years. Students in Groups II and III are required to pursue courses in Latin during their first and second years.

Classical Archaeology

Graduate courses in Greek archæology are given by Dr. Robinson and in Roman archæology by Professor Wilson. In 1906-07 Dr. Robinson lectured twice a week throughout the year on Pausanias and the Topography of Greece, and once a week on Strabo. He also lectured once a week throughout the year on Greek Sculpture, and once a week on

Greek Life. Once a week throughout the year Greek epichoric and dialectic inscriptions were read.

Next year twice a week Dr. Robinson will interpret Greek historical inscriptions. Once a week he will lecture on Greek vases and Greek mythology. Professor Wilson will lecture once a week on Latin epigraphy, with practical exercises in the interpretation of inscriptions from original stones and published texts. He will also lecture once a week on Topography and Monuments of Ancient Rome.

Courses in Greek and Roman life and in the outlines of Classical Archæology are also provided for undergraduates.

Sanskrit and Comparative Philology

Courses of instruction, directed by Professor Bloomfield, with the assistance of the Fellow or Scholar in Sanskrit, are provided in the Indo-Iranian languages (Vedic and Classical Sanskrit, Pāli and Prākrit, Avestan or Zend, and Old Persian), in Comparative Grammar of the Indo-European languages, in historical Ethnology of the Indo-European peoples, and in general Linguistic Science. During the sessions of 1897-99, 1901-05, and 1906-07, courses in the Lithuanian language and literature were given: instruction in one or another of the ancient languages of the Balto-Slavic (Lithu-Slavic) family will continue to figure as a regular feature of the work of the university.

These instructions aim to meet the wants of those who wish to devote themselves to the study of these branches exclusively and for their own sake, *i. e.*, those who wish to become specialists in Sanskrit Philology or Comparative Philology; and also the wants of students of languages in general, who wish to obtain a broader linguistic basis for special studies in other departments of philology.

The advanced work aims especially to meet the wants of those who wish to make Indian philology or comparative philology their special study. Instruction is given by prac-

tical exercises, lectures, seminary work, and, where possible, the use of native Sanskrit manuscripts. The seminary is furnished with a carefully selected library (including some manuscripts); this has been increased recently by the Stratton Memorial Library, a valuable collection presented by the wife of the late Alfred William Stratton (Ph. D., 1895). Approximately complete sets of the Oriental journals, as well as the journals in comparative philology, are freely accessible in the main library.

A prolonged course in Sanskrit, involving two lectures a week during two years and attendance in the Vedic Seminary for a half-year (one hour a week), is planned so as to furnish a good knowledge of Classical Sanskrit, and to include an introduction into the dialect of the Vedas. This amount of work represents material sufficient for the first subsidiary subject for the degree of Doctor of Philosophy. A course in the same study for one and a half years, involving two hours a week, is the amount required for a second subsidiary subject leading to the same degree.

A synopsis of the courses offered during past years may be presented under six heads:

I. Courses in the general principles of comparative philology, or linguistic science, and on special chapters thereof; lectures on ethnology and the history of religions.

II. Courses in the general comparative grammar of the Indo-European languages; comparative grammar of Sanskrit and Avestan; comparative study of Indo-European accentuation; comparative study of Greek, Latin, Sanskrit, and Teutonic, including vocalism, consonantism, noun-formation, and inflections.

III. The Vedic, Sanskrit, and Prākrit dialects; Rig-Veda; Atharva-Veda; literature of the Brāhmanas and Upaniṣads. The law books of Manu and Yājñavalkya; the Drama Çakuntalā and introduction into Prākrit; Hitopadeça, Kathāsaritsāgara, and Nala. Sanskrit grammar and prose composition.

IV. The Pāli language and Buddhist literature.

V. The Avestan language and the sacred books of the Avesta.

VI. The Lithuanian language and literature.

Oriental Seminary

In the Oriental Seminary, of which Professor Haupt is director, both introductory and advanced instruction is provided in Oriental history and archæology, as well as in the principal Semitic languages, *viz.*, Hebrew (Biblical, post-Biblical, and Modern), Biblical Aramaic, Syriac, Arabic (both classical and modern), Ethiopic, Assyrian, etc.; also in Sumerian, Egyptian, Coptic, Malay, Tagalog, Bisayan, Ilokan, etc. In the organization adopted in 1883, a course of three years was arranged. The centre of the work is the Old Testament, special attention being given to the critical study of Biblical texts and the cuneiform inscriptions bearing on the Scriptures. Professor Haupt is assisted by Associate Professor Johnston and other competent instructors.

The various courses are adapted to the requirements of four classes of students, namely: (*a*) students of theology wishing to obtain a thorough acquaintance with the sacred tongue and its sister idioms as a means of elucidating Scripture and problems of the comparative history of religion; (*b*) students of linguistics intending to make comparative grammar of the Semitic languages their specialty; (*c*) students of Oriental history and archæology desirous of drawing directly from the original sources; (*d*) persons looking for instruction in the living Oriental languages (as modern Arabic, Turkish, Persian, Amharic, Malay, Tagalog, etc.) for practical purposes.

In these various courses, the Seminary method is followed throughout, the student being from the first brought face to face with the several idioms, without long theoretical introductions. Stress is laid on a thorough grammatical training, imparted in connection with the minute philological analysis of some selected text in the respective languages, or by written exercises in translating from English into Hebrew, Arabic, Syriac, and Ethiopic, or from Hebrew and Arabic into Assyrian, and from Assyrian into Sumerian, etc., printed

grammars serving only for occasional reference. There are also exercises in Hebrew conversation.

A room has been set apart containing a well-equipped working library for all the branches of Oriental research (including the library of the late Professor A. Dillmann, of Berlin, the Leopold Strouse Semitic Library, a special collection of works on the dialects of the Philippine Islands, etc.), and some advanced students are usually present to help in the preparation for the recitations conducted by the Director of the Seminary, and to furnish any other aid that may be desired. Near the Dillmann Library, on the same floor, are some archæological and antiquarian collections, including the Cohen Collection of Egyptian Antiquities, the Sonneborn Collection of Jewish Ceremonial Objects, collections of Hebrew and other Oriental manuscripts, Babylonian seal-cylinders and clay tablets, etc.

English

The instruction in English is given by Dr. James Wilson Bright, Caroline Donovan Professor of English Literature, Dr. William Hand Browne, Professor of English Literature, Dr. Herbert Eveleth Greene, Collegiate Professor of English, and Dr. John Calvin French, Instructor in English. Graduate and collegiate courses are provided in conformity with the principles followed in the other language departments. Advanced students are instructed in the technical aspects of linguistic and literary science, and trained in the processes of original investigation.

GRADUATE COURSES

The advanced courses in English are so arranged as to enable a student, in three or four consecutive years, to study with precision all the important departments of grammar and of literature. Instruction is imparted by lectures, by freer conferences, by the methods of the Seminary, and by

class-room recitation. The Seminary (four hours a week) constitutes the chief organ of instruction and research. It supplies means for the inculcation of what is presented in the lectures, and for organized and prolonged concentration of effort on selected subjects. Usually the work of the Seminary centres each half-year in a different period of the literature, ranging from Anglo-Saxon times to the present century. The literature of the period studied is investigated as to its sources, the history of its forms and traditions, and its artistic value; and linguistically the period is studied in its relation to the history of the language. The members of the Seminary also meet fortnightly as a Journal Club, chiefly for reviewing the current philological (linguistic and literary) periodicals and recently published books and monographs. As supplementing the lectures and the Seminary, classes are organized for special training in textual criticism, for the reading of the poets, and for the discussion of the canons of literary criticism. Weekly conferences and informal lectures furnish an opportunity for the discussion of many topics not provided for in the regular courses of the year; these hours are in part occupied by lectures given by the students, that they may thus acquire experience in the more formal presentation of the results of special study.

COLLEGE COURSES

1. *Rhetoric and English Composition.* In this course, which is required of all undergraduates, the principles of good writing are inculcated. The use of text-books is supplemented by lectures and discussions, by weekly practice in the writing of short papers, a few of which are read and criticised in the class-room, and by the writing of longer papers, which are read and criticised privately with the writers. During the first half-year the study is directed to the elements of style—the word, the sentence, and the paragraph. The weekly practice in writing is combined with an examination of the usage of standard writers. During the second half-year the various forms of composition—description, narra-

tion, exposition, and argument—are studied and practiced; the work also includes a critical study of standard prose in its various forms. An additional course in English Composition is prescribed during the second year; but students who have attained a creditable rank in the work of the first year are excused from this course. Elective courses in description and narration and in exposition and argument are provided for students who wish further training in the art of writing.

2. *Public Speaking.* A course in reading and platform speaking, which is required of all undergraduates, affords training in breathing, enunciation, and expression. The work is made as practical as possible and is individualized by the division of the class into small sections, each of which meets once a week. Parliamentary procedure and the theory of argumentation, with frequent practice in debate, are studied in a course in forensics, required in the third year. Further practice in debating is provided in connection with an elective course in exposition and argument, and in the annual inter-class and inter-collegiate debates.

3. *English Literature.* The prescribed course in Rhetoric is followed by an introductory course in English Literature. This course is prescribed for students in the second year; and for those who may wish to continue the study, provision is made in elective courses covering the most important periods of English and American literature. These courses are for students in Groups I, III, IV, and V, — those who are not making a special study of the subject, but who wish such acquaintance with it as may be regarded as a necessary part of a liberal education. The aim of the instruction in these courses is to give the student an outline history of English Literature, to teach him to read intelligently and with insight, and to lead him to read widely in the works of the more important writers.

Special courses are provided for those undergraduates whose studies are directed more particularly to modern languages and their literature (Group II, Third and Fourth Years).

Group II—Third Year. This course (three hours a week, throughout the year) presupposes a fair knowledge, derived from previous courses, of the literature down to and including Shakespeare. It covers the drama of Ben Jonson and his followers, the writers of the time of the Restoration, Dryden and the French school, and the "classical" period down to 1770. Thereafter (in the second half-year) is taken up the rise and prevalence of "romanticism" in its various aspects, and the development of the novel and romance down to recent times.

Group II—Fourth Year. This course deals especially with the English Language, its history and changes, and with the early poems of the literature. During the first half-year (three hours a week) Anglo-Saxon is studied, with Bright's *Anglo-Saxon Reader* as text-book. During the second half-year (three hours a week) the language is taken up at the point where it emerges after the Norman Conquest; and the course includes writers from the middle of the twelfth century to Chaucer. One hour a week is given to the study of the Early Scottish poets of the fourteenth and fifteenth centuries.

German; Germanic Philology

The graduate work in this group of studies proceeds, on a basis of similar preparation, in two different directions, converging finally towards a common goal. The courses in Germanic philology have to do primarily with the earliest linguistic monuments of the Teutonic nations, and with the ascertainable structural relations of Germanics to the cognate languages of the Indo-European family. They are accordingly intended not only for students of German, but also as auxiliary studies for students in other language departments. This part of the work is in charge of Professor Collitz.

The courses in German include instruction in the language and literature of all periods of German proper, together with

occasional classes in Old Norse and in Dutch. This work is under the direction of Professor Wood, with the assistance of Associate Professor Vos, Dr. William Kurrelmeyer, and Mr. Julius Hofmann.

In the German Seminary, which is conducted by Professor Wood, nearly equal attention is devoted to modern German literature and to that of the older periods. To enter upon the work of the Seminary in the literature of the classical period, the student should possess a knowledge of German equivalent to that imparted in the undergraduate courses hereinafter mentioned, supplemented by private readings. For the seminary work in the older literature, it is necessary, in addition, that a preliminary course in Middle High German should be first completed, and this may be taken with advantage by the student immediately upon entering. All graduate students of German are required to share in both the philological and the literary work, and to direct their efforts to the attainment of broad results, which may serve as the foundation of scientific work and of successful teaching; but the Seminary and the allied graduate courses are believed to offer also sufficient opportunity and encouragement for the prosecution of chosen lines of work, whether on the linguistic or the literary side, in accordance with individual capacity or bent. In this way, opportunity for independent research is afforded, within the framework of organized effort directed towards the attainment of results which concern the Seminary as a whole, and towards which each member is expected to contribute his share.

The subjects selected for the Seminary during recent years are as follows:

1902–1903. German Literature in the Eighteenth Century; Walther von der Vogelweide.
1903–1904. Goethe's Faust.
1904–1905. Goethe and Schiller (1786–1805); Minnesangs Frühling.
1905–1906. Storm and Stress and Early Romanticism; Walther von der Vogelweide.
1906–1907. Goethe's Lyrical Poems; Nibelungenlied.

The Germanic Society meets fortnightly, under the direction of Professors Wood and Collitz, and supplements the work of the German Seminary and of the more special courses in Germanic philology. Before it are presented not only reports on articles in current journals, but also successive results of studies by the members. The chief object of the Society is to foster and guide the aptitude for more sustained individual investigation than the collective work of the Seminary offers scope for. Lists of the more important papers presented are given in the yearly reports.

In addition to the work of the Seminary (three meetings a week), other advanced courses are given. For example, in 1905-1906, Professor Wood gave courses in Gothic and Germanic Mythology, and lectured on the beginnings of German classicism. Dr. Vos conducted classes in Old High German, in Middle High German language and literature, and in Modern Dutch. A course on the German Novel in the Seventeenth Century was given by Professor T. S. Baker, of the Jacob Tome Institute.

The undergraduate work in German is differentiated with reference to those who have offered modern languages and those who have offered Greek for matriculation.

Students who have matriculated in modern languages enter at once upon German Course 1, four hours weekly, during the year, a course required of all undergraduates other than those who have matriculated in Greek. The reading consists in the main of modern narrative prose. Private readings and weekly exercises in prose composition supplement the class readings.

Upon the completion of German Course 1, undergraduates in Group II, or undergraduates in any of the other groups who elect German, pursue the study three hours weekly, during a second year, in German Course 2. The readings are chosen from representative classical authors, and instruction is given also in the writing of German prose.

German Course 2 may be followed by German Course 3, three hours weekly, during the year. The readings from

the classical period are here continued in texts of greater difficulty, and instruction is given in the history of German literature. German Course 4 consists of readings in Modern German Drama (Kleist, Grillparzer, Hebbel), three times weekly.

For students who have matriculated in Greek, a course in the Elements of German is provided, four hours weekly, for one year. While no knowledge of German is assumed for this course, previous training in the language renders rapid progress in grammar possible. This study is followed during the rest of the year by prose readings, supplemented by elementary prose composition. Successful completion of the German Elements absolves the requirements in German for those who have matriculated in Greek, but the student may, if desired, continue his study of the language in German Course 1.

An elective course in scientific readings is open to undergraduates who are preparing to enter the medical department.

Classes are also provided in conversational German and in historical and scientific reading for graduates who lack the ability to read the language at sight.

Romance Languages

Advanced instruction in the Romance Languages is so planned as to cover at least three years, and is directed by Dr. A. Marshall Elliott, Professor of Romance Languages, with the assistance of Associate Professors Marden, Armstrong, and Ogden, and others. The subjects of instruction are divided into three distinct sections: a purely linguistic, a purely literary, and a composite group which is intended to unite the first two. Every one who intends to take a degree in Romance Languages, must work in these three lines, which are arranged to supplement one another according to the attainments and bent of the student, and which are con-

centrated, for given periods of the course, on the same linguistic domain. The first year is spent chiefly in preparation for seminary work, to which the student is generally admitted, as an active member, toward the end of the year. During this preliminary period a practical knowledge of the principal Romance languages is acquired (a thorough acquaintance with Latin and modern French being pre-supposed), if the student does not already possess such knowledge; a brief survey is given of the history of the science, together with an introduction to the use of scientific methods in language and literature. With this equipment the student is prepared to begin an appreciative scrutiny of special texts with their critical linguistic and literary apparatus. He is taught to handle his materials with discriminating judgment, and, according to his progress, subjects are assigned to him for report and investigation which tend to develop the patience and accuracy necessary to a careful worker. In literature, as in language proper, particular attention is given to the origins, while constant reference is made, by way of comparison, to the modern forms. By extensive reading, required in connection with the subjects taken up, he is familiar with the different phases of opinion held by leading European scholars concerning these subjects, and he is thus enabled to control certain parts of his work within well-defined limits. After the first year the student is expected to concentrate upon some single line of work within his general field. It will be observed that the student's work in this course is comparative, and that he moves from the general to the particular. In the early part of it, the object is to give a broad basis to work on, by making him so familiar with the principal Romance idioms that he may use them readily, by way of illustration, in his subsequent studies. Dialect study, phonology, and critical literary work are made important features of this plan of studies.

The subjects to which attention has been given in the Seminaries in past years are as follows:

1903–04.	French:	a. Marie de France: *Fables.*
		b. The French Theatre in Nineteenth Century.
	Spanish:	*Libre de Apollonio.*
	Italian:	The Earliest Monuments of Italian Literature.
1904–05.	French:	a. Marie de France: *Fables.*
		b. Genesis of the modern Lyric Capital in French Literature.
	Spanish:	*Libre de Apollonio.*
	Italian:	The Decameron of Boccaccio.
1905–06.	French:	a. Marie de France: *Fables.*
		b. The Schools of Poetry of the Nineteenth Century.
	Spanish:	The Prose Works of Alfonso el Sabio.
1906–07.	French:	a. Marie de France: *Fables.*
		b. Romantic and Philosophic Schools of Poetry of the Nineteenth Century.
	Spanish:	The Poems of the *Mester de Clerecía.*

In addition to the work of the Seminaries, lectures are regularly given: (1) on French Phonetics, physiological and historical, (2) on French syntax, (3) on Romance morphology, (4) on French dialects, (5) on Dante, (6) on Old-French palæography, (7) on the history of French Philology, (8) on the sources of Romance Philology, (9) on Popular Latin, (10) on Italian philology and literature, (11) on Spanish philology and literature, (12) on Old-French literature, (13) on Modern-French literature, (14) on Romance versification, (15) on Methodology of the Romance languages, (16) on French palæography, (17) on Classical-French literature.

The special lectures on the French, Italian, and Spanish literatures are arranged to run through the whole period of three years, and form the most essential part in the training of the student.

Modern Language Notes, of which Professor Elliott is the editor in chief and which is now in its twenty-second volume, is issued monthly by members of the English and Romance departments; in this are presented the most recent aspects of linguistic and literary research in the modern idioms.

The undergraduate classes in French are conducted by the

Associates of the department, under the direction of the head of the department. Students in Group II, who elect French, follow class work for three or four hours weekly through four years, during which time they read extensive selections from Modern-French and Classical-French texts, and receive a thorough drill in grammar, composition, and pronunciation. Lectures on French Literature and on French Life are given in the advanced classes, and private reading is required of all classes. Two-year courses in Italian and Spanish, similar in arrangement and requirements to those in French, are also provided for undergraduates.

History

Advanced instruction in History and in methods of historical research is offered to graduates, or to special students of mature years, if qualified by ability and previous studies to pursue such courses. The work is planned to develop the spirit of original research, and this end is attained not alone by lectures, but also by individual advice and by the constant association and co-operation of students and instructors in special conferences. The best results of original inquiry are usually published in the "Johns Hopkins University Studies in Historical and Political Science." Avenues of publication have also been found hitherto in the leading historical and economic journals.

GRADUATE COURSES

Professor John Martin Vincent lectures to graduate students on the history of Europe and on the methods of historical investigation. The courses direct attention to the social, economic, and constitutional development of European peoples. The subjects follow in consecutive order, the topics for each year forming a complete and independent group. The whole series of courses requires three years for completion

and offers opportunity for close study of selected portions of the Mediæval and Early Modern History of the Continent and England. The lectures on historical research discuss in detail the various materials of history and the methods by which these are tested and used. Dr. Vincent also conducts a seminary for the study of selected historical problems. The work of the students is subjected to criticism in order to promote facility in research and develop historical judgment.

Professor Charles M. Andrews lectures to graduate students on the Constitutional History of England, the course extending over a period of three years. The treatment allows for a consideration of closely allied institutional and economic aspects of the subject and furnishes an opportuuity for wide reading and a certain amount of individual investigation of selected problems. Professor Andrews lectures also on the history of British colonization in America, covering the British colonial and imperial systems and the economic and constitutional growth of the colonies in America. This particular field offers an excellent opportunity for independent investigation on the part of the students. Every third year Professor Andrews lectures on non-American contemporary history, particularly since 1871, for the purpose of arousing interest in the historical aspects of recent events and of showing some of the characteristics of modern political, social, and economic life in other countries than America. He also conducts a seminary in English constitutional and economic history and in American colonial history, which is designed to supplement the lecture courses on these subjects. In the seminary, texts, source-materials, bibliography, and the results of private investigations constitute the leading features of the work, which is largely individual in character.

Dr. James Curtis Ballagh, Associate Professor of American History, acts as an adviser to graduate students and lectures, in successive years, upon connected topics in American colonial history, American institutional history, United States constitutional and political history. He also conducts

The work centres in the Economic Seminary, the membership of which is limited to the most advanced students, and the primary design of which is to develop scientific research in economic study and investigation. The present field of research is the history, structure, and function of labor organizations in the United States. Individual members are assigned specific aspects of the labor question for study and investigation. In each of such cases, the immediate environment is first studied; thereafter examination is made of conditions in other typical communities until sufficient data for reasonably safe generalizations are obtained. Members of the Seminary showing special capacity for economic investigation in other fields than that selected for collective study are encouraged to continue their inquiries and to present the results for criticism as to method and content.

Formal graduate instruction is offered in Economic Theory and in Applied Economics, by parallel courses of lectures throughout the year. The particular topics treated vary from year to year. In 1905-06, Professor Hollander lectured two hours weekly on economic thought before Adam Smith, and the interpretation of Ricardo, and two hours weekly on the theory and practice of exchange with particular reference to the institutions of the money market. During the present year, attention has been given, in the course on economic theory to a careful survey of the principles of political economy. In the course on applied economics, careful study has been made of American municipal finance. Dr. Barnett has lectured during the first half-year on the development of enterprise, and during the second half-year on industrial corporations. Courses of lectures were given during the year by Mr. John M. Glenn, President of the Board of Supervisors of City Charities, on Problems of Relief; by Mr. Clayton C. Hall on The Theory and Practice of Insurance; and by Mr. Logan G. McPherson on Railway Legislation.

While primarily designed, as has been noted, for the needs of students preparing for a scientific career in the field of

political economy the instruction offered is of material service to persons looking forward to practical social work, or proposing to enter the public service, the professions of law and journalism, or desirous of equipping themselves for a large and generous citizenship. With this in view, particular attention is paid to recent industrial and financial developments in the United States. Proximity to Washington offers special facilities for study and investigation in these directions, and efforts are made to profit by close acquaintance with and actual use of the important resources there existing.

UNDERGRADUATE COURSES

The undergraduate instruction in political economy is given by Professor Hollander and Dr. Barnett. It is designed not only to prepare elementary students for the advanced courses described above, but also to contribute to a liberal education that fund of information and that mode of thought which will permit young men, in whatever walk of life engaged, to interpret and to appreciate the economic activities of human society.

The method employed is class-room instruction from required text books, supplemented by lectures, collateral reading, written reports, and periodic examinations. The course of instruction covers three years. In the first year, the economic development of England and general economic theory are studied. In the second year, the development of economic thought is studied, and attention given to money, credit, labor unions, and corporations. In the third year, attention is directed to the chief methods used in statistical inquiry, and to the theory and practice of finance.

Political Science

The graduate work in Political Science, conducted by Professor Willoughby, has for its primary aim the preparation of advanced students for professional and original work in the fields of Constitutional Law, International Law and Diplomacy, and Political Philosophy, and seeks also to supply the necessary training for those desiring to enter the higher branches of the public service, as well as to furnish a broad and philosophical equipment to those who expect later to pursue the study and practice of the law.

The work is so arranged as to give three years of continuous instruction.

Seminary. In addition to the Historical and Political Science Association, at which the advanced work of the students and papers by the instructors and invited speakers are presented and criticised, a Seminary is held weekly, at which reports upon special topics, prepared by the students, are read and discussed. During the past two years unsettled points in international and United States constitutional law have been specially considered.

The lectures are divided into six courses, each two hours weekly, two courses being given each year. These courses, though complete in themselves, are so arranged that the first three give a comprehensive treatment of United States and foreign Constitutional Law, while the last three together cover the entire history of the development of political ideas. The courses are as follows:

(1) *Comparative Public Law.* The theory of the State, the general principles of constitutional and international law, and the more difficult points in the systems of constitutional jurisprudence of the modern European states are discussed. Especial attention is given to composite forms of state life.

(2) *Advanced American Constitutional Law.* For this work a general knowledge of United States political history and constitutional law is presupposed, the lectures being de-

voted to a discussion of the more perplexing and unsettled points in our constitutional jurisprudence, and the illustrations being drawn largely from the recent and current decisions of the United States Supreme Court.

(3) *The Legal Aspects of Economic and Industrial Problems.* In this course the chief legal points involved in the state regulation of public and private employments are discussed. Among the particular topics treated are: eminent domain, the police power, taxation, interstate commerce, factory legislation, capitalistic combinations, labor unions, strikes, boycotts, industrial arbitration, bankruptcy, legal tender.

(4) *History of Ancient and Medieval Political Theories.* The political ideas and ideals of these times, as revealed in literature, law, and political practice are analyzed and criticised. Especial effort is made to show the extent to which these theories have been the outcome of the objective conditions and general intellectual characteristics of the times in which they have been formulated.

(5) *History of Modern Political Theories to the Nineteenth Century.* A continuation of the preceding course.

(6) *History of the Political Theories and Literature of the Nineteenth Century.* A continuation of the preceding course.

Mr. Henry Jones Ford gives a course of one hour weekly through the year, entitled *The Theory and Practice of Politics.*

In this course general principles are applied to the interpretation of practical politics. The questions considered are raised by instances drawn from the events of the times, and the bearing of political theories upon them is examined. Several lectures deal with the problem of social origins, the natural history of the State, and the laws of political development. Constitutional tendencies in federal, state, and municipal government are considered with special regard to the working of these institutions in actual practice.

Undergraduate instruction in Political Science is given in connection with the undergraduate historical and economic courses.

Philosophy and Psychology

Graduate Courses

The graduate work of the department falls into two divisions, according as the student specializes in Philosophy proper or in scientific and experimental Psychology. It is expected that courses allowing work for a degree with Education as principal subject will soon be arranged. Within these two divisions many special topics are treated. In each division the work is planned to cover three years. The arrangement by years is mainly for convenience; it is not of the nature of a curriculum. The courses are offered to stimulate and aid the student in the work of investigation. Whether, and when, the candidate shall take the degree of Doctor of Philosophy, under the university regulations, depends upon his success in the prosecution of a piece of research.

In the division of Philosophy, the first year offers courses in General Psychology, Social Psychology and Philosophy, and Theory of Evolution and Comparative Psychology,—these topics being a necessary foundation to the more detailed work of later years. In the division of Psychology, a training course in Experimental Psychology is added to the work of division I.

In the second year, more special work of research is carried on. In Philosophy, the Theory of Knowledge becomes the central topic. History of Philosophy and Ethics are given, and a variety of special topics is presented in which the student has various alternatives opened for his own research. In the Psychology division, the research courses in Experimental Psychology in the laboratory are central, the Theory of Knowledge is associated with it, and again a variety of special topics allows choice of subjects allied to the main problem of the particular student.

In the third year, the Seminary and Laboratory courses are the centre of the work, in the two divisions respectively, the student being expected to give most of his time to work on the topic of his dissertation. In this last year, the professors

devote themselves to the direction and development of the students' investigations A Graduate Conference meets weekly. Throughout the entire course the seminary and laboratory methods of instruction are preferred to that by formal lectures.

Professor Baldwin is the Director of the Philosophical Seminary, and Professor Stratton, of the Psychological Laboratory. The Seminary room, containing the department library, in Levering Hall, and the Laboratory, situated in the biological building, are in full working order. The library has the use of the large collection of journals and files of current serials belonging to the Director.

The distribution of topics among the staff is as follows: Psychology (except experimental), Theory of Knowledge, and General Philosophy are treated by Professor Baldwin; History of Philosophy and Ethics, by Professor Griffin; Experimental Psychology, by Professor Stratton, Dr. Dunlap, and Dr. Burrow.

The additional special topics treated in the year 1906-07 are Greek Philosophy, by Professor Dewey; Educational Psychology, by Professor Baldwin; Vision and Symbolic Logic, by Mrs. Franklin; the Cerebral Cortex, by Dr. Farrar; History of American Philosophy, by Dr. Riley.

UNDERGRADUATE COURSES

Courses in Logic, Ethics, and History of Philosophy are given by Professor Griffin, and in Psychology by Professor Griffin and Professor Stratton. All candidates for the degree of Bachelor of Arts are required to follow course 1, during the last year of residence.

1. *a.* Deductive and Inductive Logic.

Creighton's Introductory Logic is used as a text-book, with references to the works of Jevons, Mill, Bain, Keynes, and other writers.

b. Psychology.

Baldwin's Elements of Psychology is made the basis of instruction; the subject is presented also through informal lectures and discussions, and by means of passages in various authors assigned for reading. A series of

lectures and demonstrations on physiological and experimental psychology is included in the course. One essay on an assigned subject is required from each member of the class.

c. Ethics.

The subject is taught by lectures, recitations from a text-book—Mackenzie's Manual of Ethics being used at present,—and references to the works of the most important writers.

2. Outlines of the History of Philosophy.

Rogers's Student's History of Philosophy, Weber's History of Philosophy, and other works of reference, are used as the basis of lectures, discussions, and recitations.

3. Experimental Psychology.

This course is intended as an introduction to the problems and methods of psychological experiment.

Drawing

1. Freehand Drawing.

The instruction aims to impart such knowledge of the principles of drawing as shall best serve to educate the eye and train the hand. Students looking forward to the study of medicine or biology will find this course of value in the illustration of lectures and laboratory work.

Three hours weekly, through the year. Mr. Whiteman.

2. Descriptive Geometry and Mechanical Drawing.

This course is offered to students who intend studying engineering. The elements of descriptive geometry are first taken up and the principles of orthographic, scenographic, and isometric projections are worked out. Advanced work in descriptive geometry is taken up later.

Three hours weekly, through the year. Mr. Whiteman.

Public Speaking and Debate

A course in reading and platform speaking is required of undergraduate students in their second year. For the sake of convenience in instruction, the class is divided into several small sections, to each of which is devoted one hour a week. A course in debating, which involves the study of parliamen-

tary law, the collection and arrangement of material, and frequent practice in debate under the direction of an instructor, is assigned to students in their third year. The work of the two years is counted as a half-course. During the fourth year opportunity for a more detailed study of the art of debate and for practice in argumentative composition is open to those who desire it. Prize contests in public speaking and in debate are held annually, and one intercollegiate debate is, as a rule, undertaken each year.

Physical Training and Athletics

The authorities of the university, recognizing the importance of systematic physical exercise, under suitable advice, have placed the gymnasium under the charge of Dr. Ronald T. Abercrombie, and have practically put the work of this department on a par with the work done in the regular courses of study.

A careful physical and medical examination is made of each undergraduate, and such exercises are prescribed as are best suited to his needs. During his first year of residence, he is required to follow the prescribed gymnasium course, which includes also his attendance on a few lectures on hygiene. Regular class instruction is given every afternoon from five to six o'clock. The use of the gymnasium is optional in the case of graduate students, but is offered to all members of the university upon the payment of the usual locker fee.

The gymnasium is a new building, 127 feet long by 35 feet wide, and is provided with convenient lockers, baths, etc., as well as with the newest forms of apparatus. Adjoining the gymnasium proper is a "cage"—an enclosed and covered space for practice in running and in athletic sports—127 feet long, 66 feet wide, and 30 feet high. The Homewood Athletic Field will be ready for outdoor sports by October, 1907.

In order to prevent ill-advised participation in outdoor sports, and to guard against over-indulgence in training, the athletic teams of the university are under the control of the director of the gymnasium. No student is allowed to become a member of a team unless his physical condition is satisfactory, and no student is allowed to be a member of, or a candidate for, an athletic team, who is seriously deficient in his studies.

REGULATIONS GOVERNING THE DEGREE OF DOCTOR OF PHILOSOPHY

[Adopted by the Board of University Studies, February 26, 1898, and revised December 4, 1901.]

The degree of Doctor of Philosophy is offered to students who have followed advanced courses of university study for a period of not less than three years, under suitable guidance and favorable conditions, and who have submitted an acceptable dissertation and passed the prescribed examinations.

In order to be accepted by the Board of University Studies as a candidate for the degree of Doctor of Philosophy, the student must give evidence that he has completed such a liberal undergraduate course of academic study antecedent to the baccalaureate degree as is offered by colleges of good standing.

He must then follow advanced studies in the departments of knowledge which he may have chosen, and these studies must be pursued without serious distractions, under qualified teachers, for a period of at least three years. Private study, or study pursued at a distance from libraries and laboratories and other facilities, will not be considered as equivalent to university study.

The Board reserves the right to decide in each case whether the antecedent training has been satisfactory, and, if any of the years of advanced work have been passed by the candidate away from this university, whether they may be rightly regarded as spent in university studies under suitable guidance and favorable conditions.

In order that students may receive the definite counsel of the proper authorities with respect to their future course, they are advised to offer themselves as "candidates" for this degree as soon after entrance as their purposes are formed. At least one academic year must be passed in this university, and in

every case the year immediately preceding the final examinations. *

Correspondence on the foregoing matters should be addressed to the Registrar of the University.

Requirements for the Degree

Every candidate for the degree of Doctor of Philosophy must select one principal and two subordinate subjects, the combination to be approved by the Board of University Studies. These must be pursued without serious distraction and under the general direction of the professor in the principal subject of study, who is the official adviser of the candidate. The student must prepare a satisfactory dissertation, and must pass with credit certain written and oral examinations in his chosen departments of study.

Acceptance of the Candidate

A student wishing to be considered a candidate for the degree must make formal application to the Board of University Studies to be enrolled, and must be accepted by the Board at least an academic year† in advance of the time when he expects to present himself for examination in his principal subject. A blank form is provided for the purpose. After filling out this form, the student must present himself before the examiners in French and German at one of the stated examinations in these subjects. When their certificates are affixed to his application, he is to obtain the signatures of approval of the professors in the department concerned. The application, thus completed, is then to be presented to the Board for its final action.

* In case a student has complied with all the conditions and has practically completed his preparation for the final examinations, but is prevented by good reason from presenting himself, he should ask the Board to appoint a later day for his examination.

† The acceptance of a candidate by the Board at its October meeting is regarded as an acceptance at the beginning of an academic year.

Requirements in French and German

a. The candidate must be able to translate French and German at sight. Familiarity with journals and monographs pertaining to his principal department of study will satisfy this requirement.

b. Examinations are held in these languages at the middle and end of each academic year, at one of which times the candidate must present himself. In October there is provided a special examination for students not connected with the university during the previous academic year.

c. Students who have not acquired a reading knowledge of these languages before engaging in graduate study, are advised to pursue a course organized for that purpose during their first year. Absolving the class examination at the end of this course will be construed as satisfying this requirement for the degree of Doctor of Philosophy.

Requirements in the Subordinate Subjects

The subordinate subjects are of two grades, and are known respectively as the first subordinate and the second subordinate. Each of these subjects shall be followed by the candidate for a portion of his time, during at least one year of graduate study.

It is impossible to define with precision the amount of time to be devoted to the subordinate subjects. In general, however, it may be stated that the two subordinate subjects, taken together, should represent one year's work, two-thirds of this time being devoted to the first subordinate subject.

Dissertation

a. The dissertation must be written upon a theme approved by the adviser of the candidate, and must be completed and submitted to the Board at least four weeks before the written examinations in the principal subject are held, unless the adviser recommends a later date. The dissertation must

be legibly written, or type-written, or printed, then paged and bound, in accordance with the instructions given below. The copy thus prepared is to be placed on file and become the property of the university. Before proceeding to prepare this copy, the candidate must confer with the Registrar, who will show to him a model exhibiting the kind of paper to be used and the general style of binding to be followed. On the back of the cover shall be placed the word dissertation, the name of the author, the date, and, if possible, the title of the dissertation. The title page shall contain the words *Dissertation submitted to the Board of University Studies of the Johns Hopkins University in conformity with the requirements for the degree of Doctor of Philosophy,* in addition to the title, the name of the author, and the date.

b. The Board shall designate two or more referees, who shall present a written report on the dissertation,—said report to be filed. In the intervals between the sessions of the Board, the President shall have power to appoint the referees.

c. The candidate shall print the dissertation in full or in part,—if in part, to the extent of not less than twenty-four octavo pages, and these twenty-four pages may contain either an abstract or a section of the dissertation,—under the supervision of his adviser, within on year from the time when the degree is conferred, and shall present one hundred and fifty copies of the work to the university. A biographical sketch of the author shall be appended to the dissertation in both its manuscript and its printed form.

d. If the required number of printed copies have not been presented to the university, a deposit of $50, to insure the printing within the specified period, shall be made by the candidate at the treasurer's office before the degree is conferred. This deposit shall be returned to him when the printed copies are presented to the university.

e. If the required number of printed copies shall not be presented to the university within the specified time, the Board may declare the deposit forfeited, and may apply the amount in printing such portions as the adviser may deem proper.

Examinations

a. The candidate shall be given written examinations in the principal subject and, wherever practicable, in both subordinate subjects, and an oral examination before the Board in the principal and in the first subordinate subject.

b. The candidate shall be permitted to take the written examinations in both the first and second subordinates at the end of the respective years in which the courses in these subjects were completed, or whenever he is ready, at the discretion of the examiner.

c. The professors in the several departments of study shall prepare written reports on the result of the examinations. These reports, together with the questions and answers, shall be laid before the Board at the oral examinations and the reports filed.

d. In the written examinations no one session shall exceed five hours.

e. In the oral eaxminations before the Board, the time allotted to each examination shall be one hour, and three-quarters of this time shall be devoted to the principal subject.

Conferring of Degree

The names of the candidates found worthy of the degree will be submitted to the Board of Trustees, and with their approbation the degree will be publicly conferred.

COLLEGIATE INSTRUCTION

The Johns Hopkins University makes ample provision for collegiate instruction. The courses offered to undergraduates are maintained with no less care and thoroughness than those intended for advanced students; many of the most experienced members of the academic staff co-operate in the conduct of them. No small part of the influence and usefulness of the university is in connection with the collegiate classes, in which, since 1876, about nineteen hundred students have been enrolled.

Certain features of organization and administration have contributed to the effectiveness of the undergraduate work. The scrupulous observance of the distinction between the disciplinary methods appropriate to college teaching and the freer methods of advanced instruction; the "group" arrangement of studies, combining a reasonable liberty of choice with a sufficient exercise of authority; the facilities afforded young men of superior capacity for carrying their studies beyond the requirements of graduation; the influence upon younger pupils of the presence of a large body of graduate scholars conducting investigations in all the great departments of learning:—these conditions have proved favorable to the development of earnestness and scholarly devotion.

ARRANGEMENT OF COURSES

Upon admission to the university, an undergraduate student is assigned to an Adviser (see page 196), and under his guidance is expected to select a scheme of studies composed of courses more or less connected. In order to help the student in this selection five groups of studies are organized, details concerning which are given below. Having once made a choice, a student may not change his group except with the consent of his Adviser and with the approval of the Executive Committee of the Board of Collegiate Studies.

In the formation of the various groups, the effort has been made to combine such studies as shall give the student the essential elements of a liberal education, and, at the same time, special training in certain coördinate subjects. By this method the student is not bound to a particular routine of work for which he may feel no especial inclination, nor yet is it possible for him to waste his time and attention by the injudicious selection of wholly unrelated subjects. In all the groups provision is made for certain studies prescribed for all students who are candidates for a degree, and for certain other studies peculiar to the individual group.

By reference to the detailed statement of each group given on pages 186–190, it will be seen that the courses of the first two years are prescribed, but that in each of the last two years there are but one or two prescribed studies. In each of these last two years, therefore, a student may, subject to the provisions already noted, elect four courses. With the approval of his Adviser he may select any courses which he is prepared to enter.

The following is a general statement of the characteristic features of each group :

Group I. Ancient Languages

In Group I the emphasis is laid upon Latin and Greek, each of which is studied for at least two years. In the last two years

the courses are so arranged that the student may continue the study of these languages, or, if he desires, may devote himself to the study of History, Modern Languages, or Science.

Group II. Modern Languages

In Group II the study of Latin is continued for two years, but the literary training of the student is based chiefly on the study of English, French, and German, with Spanish and Italian if desired. In the later years the courses are arranged so as to permit the student to continue the study of Modern Languages, or to give his attention to History or Science.

Group III. History and Political Economy

In Group III the study of Latin is continued as in Groups I and II, but the student devotes the greater part of his time to History and Political Economy. He may continue these studies during the last two years, or he may take advanced courses in Latin, Modern Languages, or Science.

Group IV. Mathematics and Physics

In Group IV the training of the student is based upon the study of the exact sciences rather than upon language and history. Mathematics and Physics are studied for at least two years, and the student may also follow courses in Chemistry, Biology, or Geology. In the last two years, the student may continue the former studies, or he may take advanced courses in Modern Languages and History.

Group V. Chemistry, Biology, and Geology

In Group V the natural sciences form the basis of instruction, being supplemented by the prescribed courses in Modern Languages, History or Political Economy, and Mathematics. In the later years, the student may continue the study of Science, or he may devote his attention to Modern Languages or History.

Students who intend to enter the medical department of this university, should choose Group V, and should arrange to pursue the following courses: English, French, and German, each for two years; Mathematics, for two years; Chemistry, for three years; Biology and Physics, each for one year. Other prescribed courses are History or Economics for one year and Philosophy for one year. These students are advised by the Medical Faculty to arrange their work so that their last year shall include courses in Chemistry and Biology, and, if possible, a course in the Chemistry of the Carbon Compounds.

These courses may be arranged as follows:—First year: Chemistry 1, French 1 or German 1, English Composition 1, Mathematics 1, Physical Training. Second year: English Literature 1, German 1 or French 1, Mathematics 2, Chemistry 2, Vocal training, and a half-course to be elected. Third year: Physics 1, with laboratory, General History (History 2) or Political Economy, French 2 or German 2, Biology 1, Forensics. Fourth year: Philosophy, German 2 or French 2, Chemistry 3, Biology 2.

It should be noted that, in order to enter the medical department, the degree of Bachelor of Arts is required, and further that the conditions for this degree, as stated on pages 194, 195, prescribe at least three courses in one definite subject.

GEOLOGY 2. *Three hours lectures, six hours laboratory weekly.*
Physical Geology.
Structural Geology.
Historical Geology.
Laboratory: Elementary Petrography; Outline Paleontology.

ELECTIVE COURSE.** *Three hours weekly.*

Fourth Year

PRESCRIBED SUBJECT

PHILOSOPHY. *Three hours weekly.*
Logic.
Ethics.
Psychology.

SUBJECTS ADVISED

TWO SCIENCES. *Six hours lectures, twelve hours laboratory weekly.*

ELECTIVE COURSE.* *Three hours weekly.*

* Students who absolve this course at entrance, may substitute for it the full course in Natural History.

** For courses which may be taken as electives, see page 191.

† See statement as to requirements for the medical department on page 185.

Elective Courses

A student may take as an elective any course that he is prepared to enter. Numerous courses, other than those described under the separate groups, will be given as a rule each year; and they, as well as those scheduled in the groups, may be chosen as elective courses, under the conditions specified on page 183. In 1907–08 these will be in the following subjects:

Latin.	Mathematics.
Greek.	Chemistry.
Greek and Roman Life.	Physical Chemistry.
Classical Archæology.	Physics.
Comparative Philology.	Astronomy.
Hebrew.	Zoology.
English and Anglo-Saxon.	Botany.
French.	Geology.
German.	Philosophy.
Spanish.	Psychology.
Italian.	Drawing.
History.	Political Economy.

Detailed information concerning the various courses will be found in the pamphlet entitled "Collegiate Instruction of the Johns Hopkins University."

REQUISITES FOR THE DEGREE OF BACHELOR OF ARTS

As evidence that the collegiate course has been successfully completed, the degree of Bachelor of Arts is conferred at its close. The degree signifies, in the case of every recipient, such instruction in ancient and modern languages, in mathematics, in the physical and natural sciences, in literature, philosophy, and history, as is believed to be essential to a liberal education.

Twenty courses are required for graduation, and no combination of studies is accepted which does not include three courses in one subject and two courses in another subject.*

All candidates for a degree take the following prescribed courses, which are for one year unless otherwise noted.

Rhetoric.
English Literature.
French.
German.
History, or (in Groups IV and V) Political Economy.
Physics.
Mathematics—
  In Groups I, II, and III, one-half year.
  In Groups IV and V, one year.
Philosophy.
Vocal Training.
Forensics.
Physical Exercises.
A Laboratory Course—
  In Groups I, II, and III, Natural History (one-half year).
  In Groups IV and V, Chemistry and Physics.

The remaining courses necessary to complete the number required are chosen, subject to the approval of the Adviser, in accordance with the schemes outlined under the several groups.

* For the definition of a "course" see page 196.

A student may be admitted to advanced standing, in accordance with the regulations given on page 205, but in all cases the candidate must pursue the last year of his undergraduate course in this institution.

In general, four years of residence are necessary for the completion of the courses required for a degree. A capable student may, however, complete this work in three years. Such a student may (1) anticipate certain of the courses by special examination at entrance;* (2) present himself, at the beginning of an academic year, for examination in a single course, provided the Committee on Admission and Advanced Standing, being satisfied that the student can obtain competent instruction, has authorized him, in advance, to prepare this course during the summer vacation;* (3) take, under certain conditions, in any year of residence except the first, a greater number of courses than is called for in the program; (4) offer nineteen courses for graduation instead of twenty, in accordance with the following provision:

In case a student has an average of not less than 9 for the work of his third year, and has not received a mark as low as 7 for any of his courses since entrance to the university, he need offer only nineteen courses for graduation.

A student whose average in his studies for each of his last two years has not been less than 9, and who has not received a mark less than 7.5 in any of his courses during his last three years, shall receive his degree WITH HONOR.

Special students who have been in residence at least two years and who have completed their work in a satisfactory manner, shall receive a certificate stating the facts, and signed by the President of the University.

---

* Forms of application for these privileges are provided and must be obtained from the Registrar.

ADMINISTRATIVE REGULATIONS

Standing Committees. The Board of Collegiate Studies appoints four standing committees :

1. The Executive Committee.
2. The Committee on Admission and Advanced Standing.
3. The Committee on Scholarships and Honors.
4. The Committee on Assignment of Advisers.

The Dean of the College Faculty is *ex officio* a member of each of these.

The Executive Committee has charge of such matters pertaining to discipline and general administration as may be delegated to it by the Board of Collegiate Studies.

Advisers. When an undergraduate student is admitted to the university, he is assigned to an Adviser by the standing committee charged with this duty, and he will, under ordinary circumstances, remain under the direction of the same Adviser during his whole course. The approval of the Adviser is necessary before the student can enter upon any course of study ; no instructor will receive into a class a student who does not bring with him (in a book provided for that purpose) assurance that his Adviser approves his pursuing the study at that time ; and no student is allowed, without the consent of his Adviser, to discontinue any work. Each Adviser endeavors to establish relations of friendliness and confidence with the students assigned to his care ; he not only gives counsel in regard to the selection of studies, but promotes the welfare of his students in every practicable way.

Courses. The "standard course" of study in the undergraduate classes of the university consists of three meetings each week, of one hour each, through the year. In certain cases, a course requires four hours per week.

Laboratory instruction, six hours a week through the year, counts as one-half a course.

Latin and Greek Prose Composition, one hour a week through the year, count each as one-half a course.

Vocal Training and Forensics, each for one year, count together as one-half a course.

Examinations. Examinations in all classes are held at the close of each academic year in the ten days preceding Commencement. These are based upon the work of the entire year, and the time allotted to each examination is as follows: in a standard course, three hours; in a two-hour course, two hours; in a one-hour course, one hour; in a six-hour laboratory course, two sessions of three hours each in the laboratory.

In addition to these final examinations, intermediate examinations are held during the academic year. In order to afford opportunity for them, the regular work is suspended during the days immediately preceding the Christmas and Easter recesses. At these periods the time allotted for each examination is two hours for a standard course, and one hour for a two-hour or a one-hour course.

Instructors who do not desire to examine their classes at the intermediate periods stated, may appoint other hours for examination, subject to the approval of the Dean. In this case, standard courses are allowed, in addition to the final examinations, not more than three hours of examinations during the year; two-hour courses, two hours; and one-hour courses, one hour. All examinations are so arranged as not to interfere with the regular work of the members of the classes. In each laboratory course, two sessions of three hours each may be devoted to practical examinations in the laboratory.

Unannounced examinations or written recitations may be held at any time, in place of the regular class meeting.

Reports. Each instructor files with the Registrar, previous to the Christmas and Easter recesses and after the final examination, Official Reports of the standing of each student in his class. These are based upon both the regular exercises and the examinations, and are made in terms of the system of marks adopted by the Board. The average of these three marks is the record of the student for the year.

In case of illness or unavoidable absence at the time of an examination, a provisional mark is reported, based upon class-

work, essays, etc. When the examination is taken, this mark is corrected, if necessary.

Marks. The scale of marks for official reports is 10, 9.5, 9, etc. The highest mark is 10, which signifies "excellence," and a mark less than 6 denotes "failure."

Withdrawal from the University. A candidate for the Bachelor's degree who has not passed all the matriculation examinations at the close of the autumn matriculation examination of his third year of residence, ceases to be a member of the university. He is not allowed to return until after the Christmas recess following, and then only provided the deficiencies have been fully absolved.

A student who, at any time, has in his record failures in three courses, ceases to be a member of the university. (A failure in any course on a previous Official Report which has not been absolved by a second examination or by additional work, counts as one of these three.) In case the student desires to return to the university, he must make written application to the Board of Collegiate Studies.

Limitations upon Number of Courses. No student whose work is seriously in arrears may, except by permission of the Board, take the full number of courses prescribed for undergraduates; nor may any student, except by consent of the Board, take more than five and one-half courses. This consent is not granted to a student in his first year of residence; nor in later years if the student's record during the previous year—taking into account all his courses—was below "8."

A student who is not fully matriculated is not permitted to take more than four courses.

Athletic Teams and Musical Clubs. No student is permitted to be a member of, or a candidate for, an athletic team or a musical club, if his average standing on the preceding Official Reports is below "7."

No "attendant upon a single course" is permitted to represent the university on any athletic team or in any athletic competition.

Repetition of Courses. At the request of an instructor in any class, a student is required to repeat the work of that course, in whole or in part, if it is to count as one required for graduation.

A student whose record for the year in Rhetoric is below "8" may be required to take in the following year an additional course in the subject, one hour a week through the year.

Relations with the Graduate Departments. No course of study given in the medical department and no graduate course may count as part of the work required for the degree of Bachelor of Arts.

Graduate students following an undergraduate course are required to attend such exercises and examinations in this course as the instructor may elect.

Relations with other Institutions. No candidate for graduation, or special student, shall, during the academic year, follow courses in any professional school, or in any institution other than the university, unless permission to do so be expressly granted by the Board of Collegiate Studies. This permission will not, in general, be granted to students who are assigned the full number of hours in the university.

REQUIREMENTS FOR ADMISSION

Those who wish to pursue undergraduate courses in the university should apply to the registrar for a blank form of "Application for Admission," which must be filled up and returned to the registrar one week at least before the time set for the entrance examinations. These examinations are held at the university in June and September of each year.

To accommodate those who wish to take their examinations elsewhere, the university will accept certificates from the College Entrance Examination Board for subjects passed in accordance with its regulations. (See page 206.)

Applicants for Matriculation

Those who wish to become candidates for the degree of Bachelor of Arts must present the following certified statements:

1. A statement of the successful completion of courses in Arithmetic, Political Geography, Freehand Drawing, and either Physical Geography or a science such as Botany, Chemistry. Physics. The course in science must include laboratory work on the part of the student. Those who have not had satisfactory instruction in Drawing will be required to pursue the course offered by the university.

2. A statement in regard to the several languages required for matriculation. This should give the following information: (*a*) the authors read, (*b*) the extent of reading in each, (*c*) the length of time devoted to each subject and the number of exercises weekly.

Blank spaces for these certified statements will be found in the form of "Application for Admission" referred to above, and these should be filled up and signed by the teacher or by the head of the school, under whom the applicant has prepared for college.

If these statements are satisfactory, the applicant will be admitted to the matriculation examinations; if they are unsatis-

factory, the Committee on Admission will prescribe such conditions as may be necessary.

A candidate admitted to the examination is expected to pass in the following subjects:

Mathematics.	Latin.
English.	Greek
History.	or
	French and German.

Details of the requirements in these subjects will be found below.

Division of the Matriculation Examinations

The applicant may pass a part of the examinations one year before his admission to the university and receive credit, under the following conditions:

In his application *he must distinctly declare his intention to divide the examinations.* The subjects passed will not count towards matriculation unless the applicant offers the remaining subjects within the ensuing year. The first part of the divided examination will be confined to the following subjects, of which the applicant will be expected to pass in the first three at least:

English (*a*).	French or German.
Algebra (*a*).	History of the United States or of Greece.
Latin (*a*).	
Plane Geometry.	History of England or of Rome.
Greek (*a*).	

Requirements for Matriculation

1. Mathematics.—Algebra; Plane Geometry; Plane Trigonometry.

The requirements in Algebra are as follows:

(*a*). To Quadratics, including the four fundamental rules, the use of parentheses, factoring, highest common factor, lowest common multiple, complex fractions, equations of the first degree in one or more unknown quantities, and problems leading to such equations, inequalities, radicals, and the use of fractional and negative exponents.

(*b*). Quadratics and beyond, including quadratic equations in one and two unknown quantities, and problems leading to such equations, the theory of quadratic equations in one unknown quantity, ratio and proportion, the progressions, the elementary treatment of permutations and combinations, the binomial theorem for positive integral exponents, and the use of logarithms.

The subjects required in Plane Geometry and in Trigonometry are those treated in the ordinary text-books.

2. ENGLISH.—The examination will consist of two parts:

a. Reading. The candidate will be required to write a paragraph or two on each of several topics chosen by him from a considerable number—perhaps ten or fifteen—set before him in the examination paper. These topics are selected with reference to certain books, a list of which is given below. This part of the examination is designed, primarily, to test the candidate's power of clear and accurate expression, and will call for only a general knowledge of the substance of the books. As additional evidence of preparation, the candidate may present an exercise book, properly certified by his instructor, containing compositions or other written work.

The books prescribed for this part of the examination are:

In 1906, 1907, and 1908: Shakespeare's *The Merchant of Venice* and *Macbeth*; *The Sir Roger de Coverley Papers* in *The Spectator*; Irving's *Life of Goldsmith*; Coleridge's *The Ancient Mariner*; Scott's *The Lady of the Lake* and *Ivanhoe*; Tennyson's *Gareth and Lynette, Lancelot and Elaine*, and *The Passing of Arthur*; Lowell's *The Vision of Sir Launfal*; George Eliot's *Silas Marner*.

In 1909: Group I (*two* to be selected).

Shakespeare's *As You Like It, Henry V, Julius Cæsar, The Merchant of Venice, Twelfth Night.*

Group II (*one* to be selected).

Bacon's *Essays*; Bunyan's *The Pilgrim's Progress, Part I*; *The Sir Roger de Coverley Papers* in *The Spectator*; Franklin's *Autobiography.*

Group III (*one* to be selected).

Chaucer's *Prologue*; Spenser's *Faerie Queene* (selections); Pope's *The Rape of the Lock*; Goldsmith's *The Deserted Village*; Palgrave's *Golden Treasury* (First Series), Books II and III, with especial attention to Dryden, Collins, Gray, Cowper, and Burns.

Group IV (*two* to be selected).

Goldsmith's *The Vicar of Wakefield*; Scott's *Ivanhoe*; Scott's *Quentin Durward*; Hawthorne's *The House of the Seven Gables*; Thackeray's *Henry Esmond*; Mrs. Gaskell's *Cranford*; Dickens's *A Tale of Two Cities*; George Eliot's *Silas Marner*; Blackmore's *Lorna Doone.*

Group V (*two* to be selected).

Irving's *Sketch Book*; Lamb's *Essays of Elia*; De Quincey's *Joan of Arc* and *The English Mail Coach*; Carlyle's *Heroes and Hero Worship*; Emerson's *Essays* (selected); Ruskin's *Sesame and Lilies.*

Group VI (*two* to be selected).

Coleridge's *The Ancient Mariner*; Scott's *The Lady of the Lake*; Byron's *Maseppa* and *The Prisoner of Chillon*; Palgrave's *Golden Treasury* (First Series), Book IV, with special attention to Wordsworth, Keats, and Shelley; Macaulay's *Lays of Ancient Rome*; Poe's *Poems*; Lowell's *The Vision of Sir Launfal*; Arnold's *Sohrab and Rustum*; Longfellow's *The Courtship of Miles Standish*; Tennyson's *Gareth and Lynette, Lancelot and Elaine*, and *The Passing of Arthur*; Browning's *Cavalier Tunes, The Lost Leader, How They Brought the Good News from Ghent to Aix, Evelyn Hope, Home Thoughts from Abroad, Home Thoughts from the Sea, Incident of the French Camp, The Boy and the Angel, One Word More, Hervé Riel, Pheidippides.*

b. Study and Practice. This part of the examination presupposes the careful study of each of the works named below. The examination will be upon subject-matter, form, and structure, and will also test the candidate's ability to express his knowledge with clearness and accuracy.

The books set for this part of the examination are:

In 1906, 1907, and 1908: Shakespeare's *Julius Cæsar;* Milton's *L'Allegro, Il Penseroso, Comus,* and *Lycidas;* Burke's *Speech on Conciliation with America;* Macaulay's *Essay on Addison* and *Life of Johnson.*

In 1909: Shakespeare's *Macbeth;* Milton's *L'Allegro, Il Penseroso, Comus,* and *Lycidas;* Burke's *Speech on Conciliation with America,* or Washington's *Farewell Address* and Webster's *First Bunker Hill Oration;* Macaulay's *Life of Johnson,* or Carlyle's *Essay on Burns.*

In connection with the reading and study of the required books, parallel or subsidiary reading should be encouraged, and a considerable amount of English poetry should be memorized. The essentials of English grammar should not be neglected in preparatory study.

NOTE.—No candidate will be accepted in English whose work is notably defective in point of spelling, punctuation, idiom, or division into paragraphs.

Although candidates will be permitted to take the entire examination at the time of entrance, it is strongly recommended that Part *a* be taken as a preliminary examination and Part *b* as a final examination. Candidates will thus have an opportunity to make up deficiencies which may be discovered at the preliminary examination, and to enter the university without a condition in English.

3. HISTORY.—The outlines of the History of England and the United States or of the History of Greece and Rome, and the outlines of Geography.

4. LATIN.—A systematic course of instruction extending over four school years at least is presupposed. The applicant should have read the following texts:

Nepos and Cæsar, at least 100 pages.*
Cicero's Orations, at least 100 pages.*
Ovid and Vergil, at least 6000 verses.

The examination will include three elements:

(*a*) Latin Grammar (both forms and syntax), based on Cæsar, *Gallic War,* Book I, and Cicero, *Orations against Catiline,* I, II, and III.

(*b*) Translation into English of Latin prose and verse, together with questions suggested by the text, including questions on prosody. A part of the translation will be at sight, and, in all translations, simple, idiomatic English will be required.

(*c*) Translation into Latin of a passage of easy connected English prose.

In case the examination is divided, as provided for on page 201, (*a*) should be offered at the preliminary examination.

5. GREEK.—A systematic course of instruction extending over three school years at least is presupposed. The applicant should have read the following texts:

Xenophon, *Anabasis,* at least four books.
Homer, *Iliad,* at least four books, or *Odyssey,* at least six books.
The examination will include three elements:

* The standard page is that of the Teubner texts.

(*a*) Greek Grammar (both forms and syntax), based largely on Xenophon, *Anabasis*, Books I and II.

(*b*) Translation into English of Attic prose and of Homer, together with questions suggested by the text, including questions on Homeric life and the prosody of the Homeric poems. A part of the translation will be at sight, and in all translations simple, idiomatic English will be required.

(*c*) Translation into Greek (with accents) of a passage of easy connected English prose.

Throughout the entire preparatory course the student should have constant practice in reading Greek aloud, giving careful attention to accent and quantity, and constant practice in Greek prose composition, both written and oral. A systematic study of the essentials of Greek grammar should be carried on throughout the preparatory course.

In case the examination is divided as provided for on page 201, (*a*) should be offered at the preliminary examination.

Applicants not offering Greek must meet the following requirements in French and German :—

6. FRENCH.—The requirement in French presupposes a systematic course extending over at least two school years, at the end of which time the student should be able to pronounce French accurately, to read at sight easy French prose, to put into French simple English sentences taken from the language of every-day life or based upon a portion of the French text read, and to answer questions on the rudiments of French grammar. The examination, which may not be divided, will comprise :

(*a*) Questions on the elements of French grammar, including the inflection of adjectives, participles, and pronouns ; the use of personal pronouns, common adverbs, prepositions, and conjunctions ; the order of words in the sentence ; and the elementary rules of syntax.

(*b*) The translation into French of short sentences illustrative of the rules of grammar and of a short paragraph based on a French text given. In place of the translation of this paragraph the candidate may substitute an original exercise in French on a subject set by the examiner.

(*c*) The translation, at sight, into English of easy French prose.

(*d*) An oral exercise in pronunciation.

The candidate should have read from 400 to 500 pages of French prose taken from a standard reader and from the texts edited for elementary use, as listed by the leading publishers ; especially those of the works of About, Bruno, Dumas, Erckmann-Chatrian, Halévy, Laboulaye, Labiche and Martin, Malot, Sand, and Verne. Grammars recommended are Frazer and Squair's Part I, Joynes' Minimum, Longman's, and Perry and Reums' French Book.

7. GERMAN.—The requirement in German presupposes at least two years of school work under approved methods, with four recitations weekly, and the reading of a minimum of 300 pages of easy dialogue and narrative prose.

Candidates are expected to give particular attention to pronunciation, to the acquisition of an elementary German vocabulary, and to an accurate knowledge of the rudiments of German grammar, in quantity corresponding to Vos's *Essentials of German*.

The examination, which may not be divided, will comprise:

(*a*) Translation at sight of passages of simple dialogue and narrative prose. Help will be given on unusual words and constructions.

(*b*) Questions on grammatical forms and syntax. These will, as a rule, be based upon the passages assigned for translation.

(*c*) Translation into German of easy English from the language of every day life. In addition, a brief rendering of English into German, based on the passages described under (*a*), may be required.

Selections may be made from such texts as the following:

Baumbach, *Sommermärchen*, *Der Schwiegersohn*. Benedix, *Eigensinn*, *Der Prozess*. Gerstäcker, *Germelshausen*, *Irrfahrten*. Hauff, *Das kalte Herz*. Heyse, *L'Arrabbiata*. Riehl, *Burg Neideck*. Saar, *Die Steinklopfer*. Seidel, *Leberecht Hühnchen*. Stifter, *Das Haidedorf*. Storm, *Immensee*, *In St. Jürgen*. Sudermann, *Teja*. Wildenbruch, *Das edle Blut*, *Der Letzte*.

APPLICANTS FOR ADVANCED STANDING

A student may be admitted to advanced standing by passing the necessary examinations, or, in case he enters after matriculation in another college, provided he submits certificates from that institution satisfactory to the Committee on Admission.

SPECIAL STUDENTS

The university is ready to receive as special students those who are qualified by age, character, attainments, and habits of study, to attend its classes and lectures with profit to themselves and the institution. Such persons may be admitted, without matriculation, to a limited number of undergraduate courses; but the privilege once accorded will be forfeited at any time that the student is found unworthy of it.

The requirements for admission as a special student are that the applicant shall pass such examinations, and shall present such other evidence of fitness to pursue the desired courses, as may in each case be required by the Committee on Admission. Unless excused for some definite reason, the applicant will be required to satisfy the matriculation requirements in English, in French or German, and in either Latin or Mathematics. In the past, many excellent students have been thus enrolled, among whom not a few have subsequently changed their plans, passed the matriculation examinations, and at length received the degree of Bachelor of Arts.

College Entrance Examination Board

The College Entrance Examination Board holds examinations at numerous places in the country about the third week of June of each year, information in regard to which may be obtained by addressing The College Entrance Examination Board, Post Office Sub-Station 84, New York.

These examinations, if passed with a mark of not less than 60%, will be accepted for admission, in accordance with the following scheme of equivalents:

THE JOHNS HOPKINS UNIVERSITY	COLLEGE ENTRANCE EXAMINATION BOARD

II. FACULTY OF MEDICINE

Terms of Admission

The courses in medicine given in this university are planned for the professional education of those students who have been especially fitted to receive instruction by a course of preliminary training in the liberal arts, and especially in those branches of science, like physics, chemistry and biology, which underlie the medical sciences. Men and women are admitted upon the same terms.

The following classes of students are received as candidates for the degree of Doctor of Medicine:

1. Those who have completed the chemical-biological course in this university (Group V) leading to the degree of Bachelor of Arts.

2. Graduates of approved colleges or scientific schools who can furnish evidence: (*a*) That they have acquaintance with Latin and a reading knowledge of French and German; (*b*) That they have such knowledge of physics, chemistry, and biology as may be obtained by a year's course in these subjects when accompanied by laboratory work.

In biology the candidate, in addition to lectures and recitations, should have followed for at least a year a laboratory course of six or more hours a week in the structure, life-history, and vital activities of selected types of animal and vegetable life. Courses in botany or zoology will be accepted, provided the laboratory work has been adequate. It is desirable also that candidates should have taken a laboratory course in embryology.

The candidate should have followed a course in general chemistry for at least a year. This course should include laboratory work, about five hours a week through the year, and lectures and class-room work covering the outlines of inorganic chemistry and the elements of organic chemistry. A good knowledge of the subject as presented in Remsen's "Introduction to the Study of Chemistry" may be regarded as the minimum requirement. A fuller knowledge of chemistry is desirable.

In physics, the candidate should have followed a collegiate course for at least one year. This should include four hours a week of class-room work and at least one afternoon a week of *quantitative* work in the laboratory.

Special attention should be given to theoretical mechanics and to the mechanical and electrical experiments.

In Latin the candidate should have studied Latin grammar and should possess at least such knowledge of the language as may be acquired by reading four books of Cæsar or their equivalent.

3. Those who give evidence by examination that they possess the general education implied by a degree in arts or in science from an approved college or scientific school, and the knowledge of French, German, Latin, physics, chemistry, and biology above indicated.

Applicants for admission will receive blanks to be filled out relating to their previous courses of study. They are required to furnish certificates from officers of the colleges or scientific schools in which they have studied, as to the courses pursued in physics, chemistry, and biology. If the certificates are satisfactory, no examination in these subjects will be required from those who possess a degree in arts or in science from an approved college or scientific school.

Hearers and special workers, not candidates for a degree, will be received at the discretion of the Faculty.

ADMISSION TO ADVANCED STANDING

Applicants for admission to advanced standing must furnish evidence (1) that the foregoing terms of admission as regards preliminary training have been fulfilled, (2) that courses equivalent in kind and amount to those given here preceding that year of the course for admission to which application is made, have been satisfactorily completed, and, (3) must pass examinations, at the beginning of the session in October, in all the subjects that have been already pursued by the class to which admission is sought. Certificates of standing elsewhere cannot be accepted in place of these examinations.

General Plan of Instruction

The course of instruction is planned for those who have received a liberal education and the training in physics, chem-

istry, and general biology which has been specified. The required period of study for the degree of Doctor of Medicine is four years. The academic year begins on the first of October and ends about the middle of June. There are short recesses at Christmas and Easter.

The first two years of the course are devoted mainly to the fundamental medical sciences, a large part of the time being spent in practical work in the laboratories. In the last two years, medicine, surgery, obstetrics, and the various specialties are studied in the clinical laboratories, the dispensary, and the wards of the hospital.

The principal studies of the first year are anatomy, including normal histology and embryology, physiology, and physiological chemistry. The study of anatomy and physiology is continued in the second year. During the second year general pathology, pathological anatomy, and pharmacology are studied. A practical course in bacteriology, with the chief emphasis upon its hygienic and pathological bearings, is given during three months of this year.

Upon the basis of thorough training in the medical sciences, pursued during the first two years of the course, the student should be well fitted to undertake the study of practical medicine and surgery.

During the third year the general principles of medicine, surgery, and obstetrics are studied, and clinical instruction in medicine and surgery is given. The study of certain special branches of medicine is also begun. Leading features of the work of this year are the courses in the clinical laboratories and practical work in the dispensary.

During the fourth year the practical study of medicine, surgery, and obstetrics is continued, and instruction is given in gynecology and in the various special branches of medicine and surgery, viz.: dermatology, diseases of the nervous system, genito-urinary diseases, orthopedic surgery, laryngology and rhinology, ophthalmology and otology, pediatrics, and psychiatry. In this year the students serve as clinical clerks and surgical dressers in the wards of the hospital and are in daily attendance at special classes in the dispensary. They also

attend cases of labor in the obstetrical wards of the hospital, and under proper supervision, in the homes of the patients. For the ward and dispensary work the class is divided into small groups.

Instruction in hygiene, medical zoology, forensic medicine, and medical history is provided during the course.

Work in the dissecting room, in the laboratory, and at the bedside, demonstrations, clinics, lectures, and recitations are the main features of the methods of instruction. Simple didactic lectures occupy a subsidiary position, as compared with instruction by recitations and demonstrations and especially by practical work in the various laboratories, in the hospital wards, and in the dispensary. In consequence of the high standard of admission, the classes are not likely to be excessively large, and abundant opportunity is therefore afforded for practical work for each student and for personal contact between teacher and student.

Courses for Graduates in Medicine

Courses of instruction for graduates in medicine are given throughout the year. These courses are in Anatomy, Histology and Organology, Pathology, Bacteriology, Pharmacology, and Toxicology, Physiology, Neurology, Neurological Technique, Embryology, Physiological Chemistry, Clinical Microscopy, Medicine, Pediatrics, Obstetrics, Gynecological Pathology, Surgical Pathology, Operative Surgery, Orthopedic Surgery, Genito-Urinary Surgery, X-Ray Diagnosis and Therapeutics, Cystoscopy, and Ophthalmology and Otology. The instruction is intended to meet the requirements of practitioners of medicine, and is almost wholly of a practical character. It includes laboratory courses, demonstrations, bedside teaching, and clinics in the wards, dispensary, amphitheatre, and operating rooms of the hospital.

Detailed statements as to the courses of instruction and other information are given in the annual Catalogue and Announcement, which will be sent upon application to the Registrar of the Medical Department.

THE JOHNSTON SCHOLARSHIPS

These scholarships, of which there are three, known as the Henry E. Johnston, the James Buchanan Johnston, and the Henry E. Johnston, Jr., Scholarships, were founded by Mrs. Harriet Lane Johnston, of Washington, formerly of Baltimore, in memory of her husband and her two sons. They are awarded annually by the Trustees on the recommendation of the Academic Council. The stipend of each scholarship is the income of thirty thousand dollars. They are offered primarily to young men who have given evidence of the power of independent research. The holders of the scholarships will be expected to devote themselves to study and research in their chosen subjects, though they may be required to do some teaching. Each one will be designated as "Holder of the . . . . . Johnston Scholarship."

REGULATIONS

Candidates for the Johnson Scholarships must make application, in writing, to the President of the Johns Hopkins University before the first of May. The applications must be accompanied by such evidence of the candidates' fitness as they may be able to present. The President will refer the papers to the Academic Council, by whom the nominations will be made to the Board of Trustees at their meeting in June.

Holders of the scholarships may not engage in teaching elsewhere.

The scholars will be appointed for one year, but, if their work should prove satisfactory, they will generally be reappointed.

FELLOWSHIPS

Fellowships by Courtesy

The Academic Council may, at their discretion, by special vote, enrol as Fellows by Courtesy—

(a) Gentlemen who are or who have been teachers in colleges and other like institutions, and who wish, for brief periods, to avail themselves of the opportunities here afforded for study and for the use of books and laboratories.

(*b*) Holders of fellowships in other colleges, during their residence here.

(*c*) Those who have been fellows of this university and desire to continue in residence.

Fellows by Courtesy will not be exempt from the payment of fees, except by a special vote.

University Fellowships

Twenty fellowships, each yielding five hundred dollars but not exempting the holder from the charges for tuition, are annually awarded.

The system of fellowships was instituted for the purpose of affording to young men of talent from any place an opportunity of continuing their studies in the Johns Hopkins University, while looking forward to positions as professors, teachers, and investigators, or to other literary and scientific vocations. The fellowships are given to young men who wish to follow systematically through the year the instructions of the teachers here engaged, and those who are appointed are expected to proceed to the degree of Doctor of Philosophy. The appointments are made not merely in recognition of good work already done, but as aids and incentives to good work in the future; in other words, the fellowships are not so much honors and prizes bestowed for past achievements, as helps

to further progress and stepping-stones to honorable intellectual careers. They are not offered to those who are definitely looking forward to the practice of any one of the three learned professions (though such persons are not formally excluded from the competition), but are bestowed almost exclusively on young men desirous of becoming teachers of science and literature, or of devoting their lives to special branches of learning which lie outside of the ordinary studies of the lawyer, the physician, and the minister.

Each candidate is expected to submit his college diploma or other certificate of proficiency from the institution where he has been taught, with recommendations from those who are qualified to speak of his character and attainments. But this is only introductory. He must also submit, orally or in writing, such evidence of his past success in study and of his plans for the future, together with such examples of his literary or scientific work, as will enable the professors to judge of his fitness for the post. The examination is, indeed, in a certain sense competitive; but not with uniform tests, nor by formal questions submitted to the candidates. First, the head of a given department considers, with such counsel as he may command, the applicant's record. The professors then collectively deliberate on the nominations made by individual members of their body. The list upon which they agree, with the reasons for it, is finally submitted by the President of the University to the Executive Committee, and by them to the Trustees for final registration and appointment. By all these precautions the highest results which were anticipated have been secured. A company of most promising students has been brought together, and their ability as teachers and scholars has been recognized by the calls they have received to permanent and desirable posts in various parts of the country.

The number of applications for fellowships has hitherto been very large, and it may have happened that some candidates have failed of appointment who were really superior to those selected. But, if so, this has resulted from the fact that a considerable number of applicants have each year for-

warded to the university merely testimonials from their instructors, without examples of their own work; and, in consequence, the professors, from want of adequate knowledge have possibly passed over candidates who may have been in the highest degree meritorious.

The applicants are notified of the result by means of a printed list of the successful candidates.

The absence of candidates from Baltimore has been no bar to their appointment, in cases where adequate evidence of their claims has been presented; but it is obvious, from the nature of the case, that graduate students residing in Baltimore must have better opportunities than others of making their powers known to the appointing board, and during the last few years the number of persons appointed, who had not previously been resident here, is very small.

Regulations

1. The application must be made prior to May 1, in writing, addressed to the President of the University, and he will refer the papers to the Academic Council, by whom the nominations will be made to the Board of Trustees, at their meeting in June. There is no prescribed form of application.

2. The candidate must give evidence of a liberal education, such as the diploma of a college of good repute; of decided proclivity towards a special line of study, such as an example of some scientific or literary work already performed; and of upright character, such as a testimonial from some instructor.

3. The value of each fellowship is five hundred dollars. The holder is not exempt from the charges for tuition. In case of resignation, promotion, or removal from the fellowship, payments will be made for the time during which the office shall have been actually held.

4. Every holder of a fellowship will be expected to perform such duties as may be allotted to him in connection with his course of study, to act when called upon as an examiner or as moderator in the examination room, to give all his influence for the promotion of scholarship and good order, and in general to co-operate in upholding the efficiency of the university, as circumstances may suggest. He must reside in Baltimore during the academic year.

5. He will be expected to devote his time to the prosecution of special studies (not professional), under the direction of the head of the department to which he belongs, and before the close of the year to give evidence

of progress by the preparation of a thesis, the completion of a research, the delivery of a lecture, or by some other method.

6. He may give instruction, with the approval of the President, by lectures or otherwise, to persons connected with the university, but he may not engage in teaching elsewhere.

7. He may be reappointed at the end of the year, but only for exceptional reasons.

8. Usually not more than two fellows will be appointed in any department of study.

9. As these fellowships are awarded as honors, those who are disposed, for the benefit of others, or for any other reason, to waive the pecuniary emolument, may do so, and still have their names retained on the honor list.

Adam T. Bruce Fellowship

This fellowship was founded in 1887 by the mother of Adam T. Bruce, Ph. D., late fellow and instructor in this university, as a memorial of her son, and is awarded annually. It is bestowed by the appointing board upon the candidate whom they consider most likely to promote biological science, and especially animal morphology, by original research. The stipend is the income of the Adam T. Bruce Fellowship endowment of ten thousand dollars. Preference is given to those who have already held fellowships in the Johns Hopkins University.

The electors consist of the President of the University, the chief instructor in animal morphology, the chief instructor in animal physiology, and a non-resident member annually chosen by the resident electors.

Regulations

Candidates for the Bruce Fellowship must make application, in writing, to the President of the Johns Hopkins University before the first of May. They must forward to the President, at the same time, such evidence of their qualifications for appointment as they desire to be considered by the electors, who may require any candidate to appear before them in person.

The Bruce Fellow shall devote his time to study and research in biology at a place approved of by the President of the university, and he shall, during the month of February in the year of his tenure of the fellowship,

send to the President a written statement of the scientific work accomplished by him since his appointment.

The tenure of the fellowship shall commence on the first of September.

Two hundred and fifty dollars shall be paid to the Fellow on October 1, and the remainder at convenient intervals during the tenure of the fellowship.

The holder shall not be more than thirty years of age at the date of his election.

The Bruce Fellow may be re-elected, but not oftener than twice, and he shall be exempt from charges for tuition.

The electors shall have the power to declare the fellowship vacant, if its holder prove, in their opinion, unworthy; and no further stipend shall be paid to such person.

William S. Rayner Fellowship

The Rayner Fellowship was founded by Mrs. Bertha Rayner Frank and Mr. Albert W. Rayner, of Baltimore, to perpetuate in this university the name of their father, Mr. William S. Rayner, who had made unusual attainments in the Hebrew language and was interested in the promotion of Semitic studies. The gift amounted to ten thousand dollars, and the income is available for a fellowship, which is bestowed annually by the Academic Council upon an advanced student in the department of Semitic Languages.

SCHOLARSHIPS

[Regulations approved by the Trustees April 3, 1899, on the recommendation of the Academic Council, the Board of University Studies, and the Board of Collegiate Studies.]

University Scholarships

For the encouragement of scholarship among those who have taken the baccalaureate degree and wish to continue their studies here, a number of University Scholarships are annually bestowed, as stated below:

1. Fifteen scholarships are open about the first of January to graduates of this or of other institutions, who have been studying here during the previous part of the session. Those who wish to be candidates must make formal application to the President, stating where they have been previously trained and what studies they have pursued in this university. He will appoint a committee of five to consider the applications, and, with the aid of such evidence as may be obtained, to make nominations to the Board of University Studies.

2. These scholarships entitle the holders to free tuition and are tenable for one year. They do not carry exemption from laboratory fees.

3. They are awarded as honors, and those who are disposed, for the benefit of others or for any other reason, to waive the pecuniary emolument, or who are desirous of studying elsewhere, may do so and still have their names retained on the honor list. Those who receive the emolument will be expected to pursue their studies exclusively in this university.

4. The Board will reserve appointments, if worthy candidates do not offer.

Hopkins Scholarships

In the will of the founder of this university, his Trustees are requested to "establish, from time to time, such number of free scholarships in said university as may be judicious, and to distribute the said scholarships among such candidates

from the States of Maryland, Virginia, and North Carolina, as may be most deserving of choice, because of their character and intellectual promise, and to educate the young men so chosen free of charge."

Forty-six such scholarships, entitling the holders to free tuition, are now offered to students from the three States named.

Students can be recognized as candidates only when actual residents of the State from which they desire to be appointed, during at least the year next preceding their enrolment in the university. If the appointing board is not sure as to the legal residence of any candidate, the point in question shall be determined by the Executive Committee of the Board of Trustees.

These scholarships are all bestowed for merit, and are tenable for the year subsequent to the appointment, the holders being re-eligible.

Successful candidates who are disposed, for the benefit of others or for any other reason, to waive the pecuniary emolument, may do so, and still have their names retained on the honor list. The scholarships may be forfeited because of frequent or prolonged absence, defective scholarship, or unworthy conduct.

Scholarships made vacant by resignation, by forfeiture, or by the non-appearance of worthy candidates at the regular times of selection, may be bestowed by the appointing board, at their discretion, upon other candidates who are found worthy, provided that the principles of this foundation are not departed from.

Holders of scholarships are not exempt from laboratory fees.

Hopkins Scholars from Maryland

These scholars are appointed by the Board of Collegiate Studies, in accordance with the following regulations:

1. Four scholarships are open, at the beginning of the session, to those who have just completed their matriculation examination, and who stand best in a subsequent special ex-

amination in Mathematics, Latin, and Greek (or French and German), as required for matriculation.

2. Four are awarded in June to matriculated students whose records in the studies of the first year are most creditable. By "studies of the first year" is meant either the studies laid down for the first year in one of the regular groups, or such other studies, equivalent in amount, as may be approved of by the Committee on Scholarships and Honors.

3. Four are awarded for excellence in the studies of the second year, upon the same terms as in the case of the first year, provided that the candidate shall have absolved the "studies of the first year" as above defined.

4. Four are awarded for excellence in the studies of the third year upon the same terms as in the case of the second year, provided that the candidate shall have absolved the studies of the first and second years.

Hopkins Scholars from North Carolina and Virginia

Fifteen Hopkins Scholarships are awarded by the Academic Council to students from Virginia, and fifteen to students from North Carolina, who have already received a creditable baccalaureate degree or its equivalent. In case the entire number of scholarships are not required for graduate students, those that remain may be awarded to undergraduates, in the order of their merit. Applications, in writing, must be filed at the President's office prior to June 1.

Washington Scholarships

The Trustees offer to residents of the District of Columbia two scholarships, yielding free tuition. These, like the Hopkins Scholarships, are awarded to undergraduate students for merit, do not carry exemption from laboratory fees, and are tenable for one year, the holders being eligible for re-appointment.

Woodyear Scholarships

Mrs. William E. Woodyear, of Baltimore, gave to the Trustees, in 1893, as a memorial of her husband, the sum of ten thousand dollars, in order to provide for the annual bestowal of five scholarships, of one hundred dollars each, under such conditions as the Trustees may from time to time prescribe. At present they are awarded to young men who are known to the President of the University to be in need of pecuniary assistance, and who, at the same time, have given evidence of character and ability.

Maryland Scholarships

Twenty "Maryland Scholarships" are annually offered to residents of this State. They entitle the holders to free tuition, but do not carry exemption from laboratory fees. The scholarships are for the benefit of all parts of the State, and, accordingly, not more than one-half the number are awarded to residents of the city of Baltimore, and not more than one-half to those who are already members of the university. The appointing board consists of the President of the Board of Trustees, the President of the University, and the Dean of the College Faculty. The usual entrance examinations must be passed. Application must be made in accordance with a prescribed form, and letters certifying to the character and pecuniary condition of the candidate must be filed.

PRIZES

The John Marshall Prize

This prize was established in 1891 by a lady living in New England. It consists of a bronze replica of a likeness of Chief Justice Marshall, and is awarded annually by the Academic Council to that graduate of the Johns Hopkins University who has made within the year the most valuable contribution to historical or political science.

The Henrico Medallion

This prize is the gift (made in 1902) of the Colonial Dames of America, Chapter I, and consists of a copper medallion bas-relief commemorating the foundation of a university at Henrico, in Virginia, in the year 1619. It is bestowed annually upon a graduate or student of the Johns Hopkins University, not more than ten years after his receiving the degree of Bachelor of Arts, as a recognition of special excellence in early American History.

The Tocqueville Medal

The Tocqueville medal is annually given to the Johns Hopkins University by the Baron Pierre de Coubertin, of Paris, and is offered by the university to that student who shall have written the best essay on some subject illustrating any phase of French History, political or social, from 1815 to 1890, or a review of some important historical work published in France since 1890. The medal is given in honor of the illustrious Frenchman, Alexis de Tocqueville (1805-1859), author of the well-known historical and political studies, "Ancien Régime" and "Démocratie en Amérique."

The Sylvester Prize

The Sylvester Prize is the gift of several Baltimore gentlemen, and is offered to advanced students of mathematics as a reward for original research. It consists of a medallion likeness of Professor J. J. Sylvester, the first professor of mathematics in this university.

TUITION FEES AND EXPENSES

A

In the Philosophical Department

Tuition Fees

The charge for tuition is one hundred and fifty dollars per annum, payable at the Treasurer's office in semi-annual instalments, October 1 and February 1. There is no extra charge for instruction in any department of study, or for the use of the library and reading-room. A gymnasium fee of five dollars per annum is charged to every undergraduate during his residence in the university, and the money thus acquired is devoted to defraying the expenses of the University Athletic Association. Graduate students who use the gymnasium are also required to pay this fee. Fees are charged, as below stated, for registration, for material consumed in the laboratories, and for diplomas.

No deduction is made at the Treasurer's office because of absence for a period of less than half a year, or because a student gives only a part of his time to study, or because he belongs to but one class. Prompt payment of fees is required.

Registration Fee and Caution Money

Every student is required at entrance to pay a registration fee of five dollars and deposit ten dollars as caution money, the latter being repaid to him when he leaves the university, if there are no charges against him.

Fees for Limited Attendance

Persons engaged in other pursuits—such as clergymen, lawyers, physicians, teachers,—*who are able to give only a portion of their time to study and are not candidates for a degree,* are permitted to follow certain courses of lectures, not exceed-

ing five weekly, or to work in a scientific laboratory, at such times as may be arranged with the Director thereof, without attendance on lectures, on the payment, at entrance, of fifty dollars for the year, besides the registration fee and caution money. For a course of lectures not exceeding five weekly, with accompanying laboratory work, the fee is seventy-five dollars per annum, payable at entrance. Such persons are not regarded as members of the university, but are enrolled as "attendants upon lectures," and are entitled only to such privileges as they have paid for. Persons who desire to be so enrolled are required to make a special written application to the Registrar.

Laboratory Charges

In Chemistry: For undergraduates and for graduates who take Chemistry as a subordinate subject, twenty-four dollars a year; for graduates and special students following Chemistry as their principal subject, thirty-six dollars a year. For a half-year, the fee is one-half of these amounts.

In Physics: For students who work two afternoons a week, twenty-four dollars a year; for those who take Physics as their principal subject, thirty-six dollars a year. For a half-year, the fee is one-half of these amounts.

In Biology: For undergraduates and for graduates who take Zoology or Physiology as a subordinate subject, twenty-four dollars a year; for graduates and special students following a biological science as their principal subject, thirty-six dollars a year. For a half-year, the fee is one-half of these amounts.

In Geology: Ten dollars a year; for a half-year, one-half of this amount.

Students taking courses in geology are expected to take part in a series of excursions, and to pay their personal expenses, which will, however, in no case amount to more than $14.00.

In all the laboratories, a charge is made for breakage and for apparatus not returned in good condition.

Fellows by Courtesy and others who have the privileges of guests in the various laboratories, are expected to pay the usual laboratory charges.

Doctors of Philosophy of this university who desire to remain for a time in the university after having received their diplomas, may do so without charge for tuition, but they are required to pay the usual laboratory charges.

Exception to the foregoing charges can be made only at the written request of the Director of a laboratory, approved by the President of the university.

Graduation Fees

The graduation fees are as follows, payable before the delivery of diplomas:

Doctor of Philosophy, ...	$10.00
Bachelor of Arts, ...	5.00

B

In the Medical Department

The charge for tuition is two hundred dollars per annum, payable at the Treasurer's Office or at the office of the Dean of the Medical Faculty, in semi-annual instalments, October 1 and February 1. There are no extra charges for matriculation, for graduation, for instruction in any department, or for laboratory courses, except in special cases for materials consumed. To a student who does not possess a microscope, there is an annual charge of five dollars for the use of one, with an additional charge of two dollars for the use of an oil-immersion lens. One dollar is charged for the rental of a dissecting microscope for one year. The student is responsible for damage to the microscope thus rented. A deposit of ten dollars as caution money is required from each student at the time of his enrolment. The caution money is repaid to the student when he leaves, if there are no charges against him. Special charges are made for breakage and for damage to apparatus.

Payment of bills may be made at the office of the Registrar

in the Physiological Building, which is open from 9 a. m. to 5 p. m., or at the office of the Treasurer of the University, on North Howard Street, which is open daily from 9 a. m. to 4.15 p. m.

The fees required of graduates of medical colleges who desire to follow special courses in medicine, are stated in detail in the annual catalogue of the medical department.

Living Expenses

The university has no dormitories or other living accommodations. Students may find comfortable homes in the vicinity,—in boarding houses or with families. The price of board ranges from three dollars and a half a week upward, and rooms from one dollar and a half a week.

Lists of desirable places are kept by the Secretary of the university branch of the Young Men's Christian Association and by the Registrar of the medical department.

GOVERNMENT OF THE JOHNS HOPKINS UNIVERSITY

FOR THE YEAR 1907-08

TRUSTEES

The Trustees are the ultimate source of authority in all matters pertaining to the University. They act collectively, through the standing committees named on page 2, and through the President of the University.

PRESIDENT

Ira Remsen

The duties of this office were thus defined by the Trustees, September 14, 1876:

The President of the University is the authorized means of communication between the Board and the various officers of instruction and administration employed in the University; it shall be his duty to consult with the Professors in respect to the development of their various departments and the general interests of the University; to determine the appropriate duties of the Associates and Fellows; and to exercise such superintendence over the buildings, apparatus, books and other property as will insure their protection and appropriate use. In respect to these matters and all others which concern the welfare of the University, he shall consult frequently with the Executive Committee, and he shall attend the meetings of the Board of Trustees. Purchases, alterations, repairs, and other incidental expenses must not be ordered by any of the officers of the University without his previous assent, or the expressed authority of the Board.

By resolution of the Trustees, May 2, 1892, the President of the University was constituted a member *ex officio* of the Board, and also *ex officio* a member of the Executive Committee.

JOHNSTON SCHOLARS

The Johnston Scholarships (three in number) were established in 1904 in accordance with the will of Mrs. Harriet Lane Johnston, once a resident of Baltimore, who bequeathed the sum of $90,000, in memory of her husband, Henry E. Johnston, and her sons, Henry E. Johnston, Jr., and James Buchanan Johnston.

When the institution is not named, this university is to be understood. The figures in brackets indicate the tenure of the scholarship. (F) indicates that the person has held a university fellowship here.

Solomon Farley Acree, Ph. D., Assoc. Prof. of Chemistry. [1904-06]
Henry Shoemaker Conard, Ph. D., Prof. of Botany and Bacteriology, Iowa Coll. [1904-06]
Isaac Woodbridge Riley, Ph. D., Prof. of Philosophy, Vassar Coll. [1904-07]
Ralph Stayner Lillie, Ph. D., Instr. in Compar. Physiology, Univ. of Pa. [1906-07]
Samuel Grant Oliphant, Ph. D., (F), Prof. of Ancient Lang., Olivet Coll. [1906-07]
William Davis Furry, Ph. D., (F), Henry E. Johnston Jr. Scholar. [1907-08]
Samuel Ottmar Mast, Ph. D., Henry E. Johnston Scholar. [1907-08]
August Herman Pfund, Ph. D., (F), James Buchanan Johnston Scholar. [1907-08]

FELLOWS

ADAM T. BRUCE FELLOWS IN BIOLOGY

The Bruce Fellowship was instituted by a gift of $10,000, made in 1887 by Mrs. Bruce, of New York, to commemorate the name of her son, Adam T. Bruce, Jr., Ph. D., Fellow in Biology, 1883-84, and Instructor, 1886-87.

When the institution is not named, this university is to be understood. The figures in brackets indicate the tenure of the fellowship. (F) indicates that the person has held a university fellowship here.

Henry Van Peters Wilson, Ph. D., (F), Prof. of Biology, Univ. of N. C. [1888-89]
Shozaburo Watase, Ph. D., (F), Prof. of Zoology, Univ. of Tokyo. [1889-90]
Thomas Hunt Morgan, Ph. D., (F), Prof. of Experimental Zoology, Columbia Univ. [1890-91] *Reappointed* 1891, *but resigned.*
Robert Payne Bigelow, Ph. D., (F), Instr. in Biology and Librarian, Mass. Inst. of Technology. [1891-93]
Maynard Mayo Metcalf, Ph. D., (F), Prof. of Zoology, Oberlin Coll. [1893] *Did not enter on the fellowship.*
Ross Granville Harrison, Ph. D., (F), Prof. of Compar. Anatomy, Yale Univ. [1894] *Did not enter on the fellowship.*
Seitaro Goto, S. D., Prof. of Biology, First High School, Tokyo, Japan. [1894-95]
Henry McElderry Knower, Ph. D., (F), Instr. in Anatomy. [1895-96]
George Lefevre, Ph. D., (F), Prof. of Zoology, Univ. of Missouri. [1895-97]
*Franklin Story Conant, Ph. D., (F). [1897] *Did not enter on the fellowship.*
Duncan Starr Johnson, Ph. D., (F), Prof. of Botany. [1897-98]
Gilman Arthur Drew, Ph. D., (F), Prof. of Biol., Univ. of Maine. [1898] *Did not enter on the fellowship.*
Caswell Grave, Ph. D., (F), Assoc. Prof. of Zoology; State Shell-Fish Commissioner, Balt. [1899-01]

Lawrence Edmonds Griffin, Ph. D., (F), Prof. of Biology, Missouri Valley College. [1900]
James Edwin Duerden, Ph. D., Prof. of Zoology, Rhodes Univ. Coll., Cape Colony. [1901-02]
Rheinart Parker Cowles, Ph. D., (F), Instr. in Biology. [1902-04]
David Hilt Tennent, Ph. D., (F), Assoc. Prof. of Zoology, Bryn Mawr. [1904] *Did not enter on the fellowship.*
Otto Charles Glaser, Ph. D., (F), Instr. in Zoology, Univ. of Michigan. [1904-05]
Forrest Shreve, Ph. D., (F), Assoc. Prof. of Botany, Woman's Coll., Balt. [1905-06]
Robert Ervin Coker, Ph. D., (F), conducting studies in the marine fisheries of Peru, Lima. [1906] *Did not enter on the fellowship.*
Ivey Foreman Lewis, Ph. D., (F). [1907-08]

WILLIAM S. RAYNER FELLOWS IN SEMITIC LANGUAGES

The Rayner Fellowship was founded in 1889 by Mrs. Bertha Rayner Frank and Mr. Albert W. Rayner, of Baltimore, to perpetuate in this university the name of their father, Mr. William S. LIBRARIES

1. THE UNIVERSITY LIBRARY numbers 136,000 bound volumes, selected with special reference to the instruction here given. It is arranged in several collections, of which these are the chief:

General Reference.	Classical.
Historical.	Semitic.
Economics.	Sanskrit.
Political Science.	Modern Languages.
Mathematical and Physical.	McCoy Art Library.
Chemical.	Medicine.
Biological.	Physiology and Anatomy.
Geological.	Philosophy and Psychology.

The reference library and reading room is open daily from 9 a. m. to 6 p. m.; the other rooms in accordance with special regulations.

The library receives the publications of the leading scientific societies of the world and the chief literary and scientific periodicals. The whole number of serials received exceeds fifteen hundred. This list is supplemented by those of the Peabody Institute and other institutions, so that the whole number of journals accessible (exclusive of ephemeral publications) exceeds two thousand. Important books are received by the library as soon as published, by purchase or by the courtesy of dealers.

2. THE PEABODY LIBRARY is a choice collection of books purchased since 1866. It is particularly full in academic transactions, long historical series, and costly illustrated books. It numbers 164,000 volumes, well bound, catalogued, and arranged. It is open daily, without charge, from 9 a. m. to 10.30 p. m.

3. THE ENOCH PRATT FREE LIBRARY numbers 258,000 volumes and is open daily, without charge.

4. THE MARYLAND HISTORICAL SOCIETY LIBRARY contains 43,000 volumes of historical works and is open daily.

5. Other libraries of Baltimore are the New Mercantile Library (70,000 volumes), the Bar Library (27,000 volumes), the Medical and Chirurgical Library (17,000 volumes), the Maryland Diocesan Library (30,000 volumes).

6. Washington is so near that its museums and libraries may be easily visited. Among the chief institutions of interest to students are these:

The Library of Congress.
The Smithsonian Institution and National Museum.
The Army Medical and Surgical Museum and Library.
The U. S. Coast and Geodetic Survey.
The U. S. Geological Survey.
The U. S. Naval Observatory.
The Libraries of the Departments and Bureaus.
The Corcoran Art Gallery.

PUBLICATIONS ISSUED AT THE JOHNS HOPKINS UNIVERSITY

I. American Journal of Mathematics

This journal was commenced in 1878, under the editorial direction of Professor Sylvester. Professor Frank Morley is now the editor. Twenty-nine volumes of about 400 pages each have been issued, and the thirtieth is in progress. It appears quarterly. Subscription $5 per year (foreign postage 50 cents). Single numbers $1.50. A few complete sets remain. These will be sold for $125 per set.

II. American Chemical Journal

This journal was commenced in 1870, with Professor Remsen as editor. Thirty-eight volumes have been issued, and the thirty-ninth is in progress. This journal appears monthly. Two volumes of six numbers and of about 500 pages each are issued yearly. Subscription $5 per year (foreign postage 50 cents). Single numbers 50 cents.

III. American Journal of Philology.

The publication of this journal commenced in 1880 under the editorial direction of Professor Gildersleeve. Twenty-eight volumes of about 500 pages each have been issued, and the twenty-ninth is in progress. It appears four times yearly. Subscription $3 per volume (foreign postage 50 cents). Single numbers $1.

IV. Studies from the Biological Laboratory

The publication of these papers commenced in 1879, under the direction of Professor Martin, with the assistance of Professor W. K. Brooks. Five volumes of about 500 pages, octavo, and 40 plates each have been issued.

V. Studies in Historical and Political Science

The publication of these papers was begun in 1882, under the editorial direction of Professor H. B. Adams. The series is under the direction of the departments of History, Political Economy and Political Science. Twenty-five series are now completed and the twenty-sixth series is in progress. A number of extra volumes have also been issued. Subscription $3 per volume (foreign postage 50 cents). The set of twenty-five regular series wil be sold for eighty-two dollars net.

VI. Memoirs from the Biological Laboratory.

These monographs are issued under the editorial direction of Professor W. K. Brooks. Volume V is now complete.

VII. Johns Hopkins University Circular.

The publication of the Circular began in December, 1879, and 205 numbers have since been issued. Subscription $1 per year.

VIII. Contributions to Assyriology and Semitic Philology

The publication of this journal was begun in 1889. Professor Paul Haupt, of the Johns Hopkins University, and Professor

Friedrich Delitzsch, of the University of Berlin, are the editors. Volume VI is in progress.

IX. Reprint of Economic Tracts

Professor J. H. Hollander, editor. First Series, 1903, $3; Second Series, $2; Third Series in progress, $2.

X. The Johns Hopkins Hospital Reports

These reports are edited by the Medical Faculty of the University, and published for the Johns Hopkins Hospital. Their publication was begun in 1890. Volume XV is in progress. Subscription $5 per volume (foreign postage, 50 cents). The set of fourteen volumes will be sold for eighty dollars.

XI. The Johns Hopkins Hospital Bulletin

The publication of this Bulletin began in 1889. It is published monthly. Volume XIX is in progress. Subscription $2 per year (foreign postage, 50 cents).

XII. Modern Language Notes

This journal is edited by Professor A. M. Elliott and his associates in the Modern Language Department. It appears monthly. The twenty-third volume is in progress. Price $1.50 per year (foreign postage, 25 cents).

XIII. American Journal of Insanity

This journal is under the direction of Professor Henry M. Hurd as editor-in-chief. It appears quarterly. The sixty-fifth volume is in progress. Subscription $5 per year.

XIV. Terrestrial Magnetism and Atmospheric Electricity

This journal is edited by Dr. L. A. Bauer. It appears quarterly. Volume XIII is in progress. Subscription $2.50 per year (foreign postage, 25 cents).

XV. Reports of the Maryland Geological Survey

These reports are under the editorial direction of Professor William B. Clark, Director of the Survey.

XVI. Reports of the Maryland Weather Service

These reports are under the direction of Professor William B. Clark, Director of the Service.

XVII. Annual Report

Presented by the President to the Board of Trustees, reviewing the operations of the university during the past academic year.

XVIII. Annual Register

Giving the list of the officers and students and containing detailed statements as to the regulations and work of the university.

Announcements of the Graduate, Collegiate, and Medical Courses of Instruction are issued yearly and will be sent on application.

Some of the principal separate publications issued by the Johns Hopkins Press are:

THE PHYSICAL PAPERS OF HENRY A. ROWLAND. 716 pages, royal octavo. $7.50.

BALTIMORE LECTURES ON MOLECULAR DYNAMICS AND THE WAVE THEORY OF LIGHT. By Lord Kelvin. 716 pages, octavo. $4.50.

PHOTOGRAPHIC REPRODUCTION OF THE KASHMIRIAN ATHARVA-VEDA. Edited by Professor Bloomfield. 3 vols., folio. $50.

STUDIES IN HONOR OF PROFESSOR GILDERSLEEVE. 527 pages, octavo. $6.00.

PHOTOGRAPHS OF THE NORMAL SOLAR SPECTRUM. By Professor H. A. Rowland. Set of ten plates, $25.

DISSERTATIONS FOR THE DEGREE OF DOCTOR OF PHILOSOPHY IN THE JOHNS HOPKINS UNIVERSITY.

REGULATIONS OF THE TREASURER'S OFFICE

I. The Treasurer's Office is open daily from 9 a. m. to 4 p. m.

II. All bills should be presented at that place, endorsed as correct by the person under whose authority the expense has been incurred.

III. No member of the academic staff is allowed to incur a bill in the name of the university, unless authority is given for the same by the Trustees, in advance, either as an item in the annual budget, or as a special appropriation. Blank forms of application are provided for special requisitions.

IV. Orders for books and apparatus to be imported from Europe will not be considered authorized, unless countersigned by the President or the Treasurer of the University.

All goods must be consigned to and addressed "The Johns Hopkins University, Baltimore, Md." Goods for other parties (societies or individuals) must not be included in the university cases. Invoices, sworn to before the U. S. Consul, must be sent by mail, and a duplicate invoice by the following mail, both addressed to The Johns Hopkins University.

Unless otherwise ordered, goods from Europe should be sent as follows:

From Germany by the North German Lloyd steamers sailing for Baltimore from Bremen; from England by steamship lines from Liverpool to Baltimore; from France and Italy, via Havre and Liverpool.

Printed copies of instructions to shippers, which can be obtained at the Treasurer's Office, should in all cases be enclosed with the orders.

V. The Treasurer's Office will make purchases, at wholesale rates, of supplies which are required for the current needs of the university.

VI. Such pass books as are authorized by the Treasurer should be presented for balance and settlement every month.

VII. The wages of all persons employed by the university will be paid at the Treasurer's Office.

VIII. When C. O. D. packages are expected, previous arrangements should be made for their reception.

IX. Outlays made for individuals (express parcels, postage, telegraph messages, etc.) should be settled at once.

X. An annual allowance is made by the Trustees, in the budget, for such expenses as they approve, and in deciding on the items they are governed by a consideration of the general interests of the university, as well as by the needs of special branches of instruction. Balances to the debit or credit of any account are carried forward to the new account at the opening of each financial year (September 1). A statement of the amount of the balance and of any additional appropriation will be communicated to the parties severally interested, if requested, after the Trustees' meeting in October.

Scientific Societies

1. The Scientific Association, meeting monthly, under the presidency of Professor Ames.

2. The Philological Association, meeting monthly, under the presidency of Professor Gildersleeve.

3. The Historical and Political Science Association, meeting fortnightly.

4. Naturalists' Field Club, which makes weekly excursions during the spring and autumn and holds monthly meetings for the presentation and discussion of papers.

There are also companies which meet weekly in the laboratories for the reading of the scientific journals, and seminaries in several departments of study.

Historical Statement

The Johns Hopkins University was founded by the munificence of a citizen of Baltimore, Johns Hopkins, who bequeathed the most of his large estate for the establishment of a University and a Hospital.

1867, August 24.	Incorporation of the Johns Hopkins University.

STATEMENTS IN RESPECT TO THE COURSES OF INSTRUCTION

The Johns Hopkins University has had in view, from the beginning, two main objects,—the advancement of learning through investigations conducted by its teachers and its properly qualified students, and the communication of learning through carefully planned courses of instruction. The facilities which it provides and its methods of administration are intended both for the encouragement of research, in the case of those competent to undertake it, and for the discipline and guidance of those whose chief concern is the acquisition of knowledge.

The work of the University is carried forward

I. Under the Faculty of Philosophy.
II. Under the Faculty of Medicine.

The students enrolled under the Faculty of Philosophy are:

(1) Those who have obtained the baccalaureate degree from a college of good standing, and desire to follow advanced courses in scientific, literary, or historical subjects; and also persons who wish to take advantage of the opportunities for individual investigations here afforded. Women are admitted, with the consent of the professors under whom they wish to work, on the same terms as men.

(2) Undergraduate students, who are, in most cases, looking forward to the degree of Bachelor of Arts, but some of whom are engaged in special studies without reference to graduation.

The requirements for admission to the undergraduate courses, the arrangement of these courses in the several "Groups," etc., are stated on pages 222-231. More detailed information is given in "The Collegiate Instruction of the Johns Hopkins University," which may be obtained on application, personally or by letter, to the Registrar of the University.

The students enrolled under the Faculty of Medicine are:

(1) Candidates for the degree of Doctor of Medicine. These must be college graduates, or must give evidence by examination that they possess the attainments indicated by a baccalaureate degree in arts or sciences. Women are admitted on the same terms as men.

(2) Doctors of Medicine desiring to pursue certain special courses, which are annually announced.

The terms of admission to the Medical Department and the general plan of instruction are briefly stated on pages 244–248. Detailed information is given in the "Catalogue and Announcement," which will be sent upon application to the Registrar of the department.

I. FACULTY OF PHILOSOPHY

Advanced students are received whether they are candidates for a degree or not, and they are permitted to attend such lectures and exercises as they may select. On entering the university they are expected to present their diplomas and certificates from the institutions with which they have been connected, and also letters of introduction. They are not examined by the university for admission, but each instructor satisfies himself of the attainments of those who wish to follow his guidance, before admitting them to his classes.

The professors are ready to give personal counsel to those who seek it; books and instruments adapted to investigation and advanced work have been liberally provided; seminaries limited to a few advanced students have been organized in various subjects; societies devoted to philology, to mathematical, physical, and natural science, and to history and political science, afford opportunities for the presentation of memoirs and original communications, and there are also conferences for the reading and

discussion of philological, philosophical, biological, physical, geological, and chemical papers; during the year courses of lectures are given by resident and non-resident professors on topics to which they have given special attention; the libraries of the Peabody Institute and Maryland Historical Society, founded for the benefit of scholars, are easily accessible; the issuing, under the auspices of the Trustees, of publications devoted to mathematics, chemistry, philology, biology, the modern languages, and history, brings the university into advantageous connection with other foundations; and the university reading room, which is constantly open, is liberally supplied with new and standard books and with the literary and scientific journals of this and other lands.

Instruction is carried on in the different departments by methods which vary with the nature of the subject and the character and proficiency of the scholars; but in all alike the end is the same,—that, while the students are becoming familiar with the work prosecuted and the results attained elsewhere, and are adding to their general intellectual culture, they may be encouraged to become independent and original investigators in their chosen fields of labor. Within reasonable limits the university will provide such books, apparatus, and material as may be requisite for this purpose.

The principal subjects in which advanced instruction is now provided are these:

Mathematics.
Physics.
Chemistry.
Geology and Mineralogy
Zoology.
Botany,
Physiology.
Pathology.
Greek.
Latin.
Classical Archæology.
Sanskrit and Comparative Philology.
Semitic Languages.
Anglo-Saxon and English.
Romance Languages.
German.
Germanic Philology.
History.
Political Economy.
Political Science.
Philosophy, Psychology, and Education.

MATHEMATICS

The advanced courses are so arranged that a qualified student gets in three years the more important points of view of the whole subject. The courses are elastic in character, subjects being introduced as they are needed. In general, the plan pursued is to foster independent inquiry on the part of the student. Once embarked on investigation, he uses all the apparatus of lectures and library with intelligent purpose. The seminary, which meets weekly, is primarily intended for the presentation of the results of the student's own thinking. Literature either intrinsically important or opportune is presented and discussed in the reading class, which also meets weekly.

ADVANCED COURSES

1. Mathematical Seminary.
One hour weekly. Professor MORLEY.

2. Reading Class.
One hour weekly. Professor MORLEY.

3. Higher Geometry.
Two hours weekly, through the year. Professor MORLEY.

This is a general course in Geometry, covering in three years such matters as Projective Geometry, the Invariants of algebraic forms, Line Geometry, Conformal Geometry, Geometry on an algebraic curve or surface.

4. Theory of Functions.
Two hours weekly, second half-year. Professor MORLEY.

Algebraic Functions and their integrals; Elliptic, elliptic modular, and general automorphic functions; Theory of the potential.

5. Dynamics.
Two hours weekly, first half-year (every other year; given in 1908-09.) Professor MORLEY.

Special stress is laid on Rigid Dynamics.

discussion of philological, philosophical, biological, physical, geological, and chemical papers; during the year courses of lectures are given by resident and non-resident professors on topics to which they have given special attention; the libraries of the Peabody Institute and Maryland Historical Society, founded for the benefit of scholars, are easily accessible; the issuing, under the auspices of the Trustees, of publications devoted to mathematics, chemistry, philology, biology, the modern languages, and history, brings the university into advantageous connection with other foundations; and the university reading room, which is constantly open, is liberally supplied with new and standard books and with the literary and scientific journals of this and other lands.

Instruction is carried on in the different departments by methods which vary with the nature of the subject and the character and proficiency of the scholars; but in all alike the end is the same,—that, while the students are becoming familiar with the work prosecuted and the results attained elsewhere, and are adding to their general intellectual culture, they may be encouraged to become independent and original investigators in their chosen fields of labor. Within reasonable limits the university will provide such books, apparatus, and material as may be requisite for this purpose.

The principal subjects in which advanced instruction is now provided are these:

Mathematics.
Physics.
Chemistry.
Geology and Mineralogy
Zoology.
Botany,
Physiology.
Pathology.
Greek.
Latin.
Classical Archæology.
Sanskrit and Comparative Philology.
Semitic Languages.
Anglo-Saxon and English.
Romance Languages.
German.
Germanic Philology.
History.
Political Economy.
Political Science.
Philosophy, Psychology, and Education.

MATHEMATICS

The advanced courses are so arranged that a qualified student gets in three years the more important points of view of the whole subject. The courses are elastic in character, subjects being introduced as they are needed. In general, the plan pursued is to foster independent inquiry on the part of the student. Once embarked on investigation, he uses all the apparatus of lectures and library with intelligent purpose. The seminary, which meets weekly, is primarily intended for the presentation of the results of the student's own thinking. Literature either intrinsically important or opportune is presented and discussed in the reading class, which also meets weekly.

ADVANCED COURSES

1. Mathematical Seminary.
One hour weekly. Professor MORLEY.

2. Reading Class.
One hour weekly. Professor MORLEY.

3. Higher Geometry.
Two hours weekly, through the year. Professor MORLEY.

This is a general course in Geometry, covering in three years such matters as Projective Geometry, the Invariants of algebraic forms, Line Geometry, Conformal Geometry, Geometry on an algebraic curve or surface.

4. Theory of Functions.
Two hours weekly, second half-year. Professor MORLEY.

Algebraic Functions and their integrals; Elliptic, elliptic modular, and general automorphic functions; Theory of the potential.

5. Dynamics.
Two hours weekly, first half-year (every other year; given in 1908-09.) Professor MORLEY.

Special stress is laid on Rigid Dynamics.

6. Vector Analysis.

Two hours weekly, first half-year (every other year; not given in 1908-09). Professor MORLEY.

7. Elementary Theory of Functions.

Two hours weekly, through the year. Dr. COHEN.

An introduction to the theories of functions of a real and a complex variable.

8. Differential Equations.

Two hours weekly, through the year. Dr. COHEN.

Including, in three years, Ordinary Differential Equations, their integral curves and singular points; Partial Differential Equations; Lie's theory.

9. Differential Geometry.

Two hours weekly, through the year. Dr. COHEN.

Including a study of Curves in space; Surfaces and lines upon them; Spherical representation; Applicability of surfaces.

10. Calculus of Variations.

Two hours weekly, one half-year. Dr. COHEN.

11. Theory of Numbers.

Two hours weekly, one half-year. Dr. COHEN.

12. Theory of Groups.

Two hours weekly, one half-year. Dr. COBLE.

Including Theory of Equations, Finite Geometrics, Theory of algebraic forms.

13. Theory of Correspondence.

Two hours weekly, one half-year. Dr. COBLE.

Including such matters as Cremona Transformations, general birational transformations.

14. Theory of Probability.

Two hours weekly. Dr. COBLE.

Including the applications to statistics and the Theory of Errors.

UNDERGRADUATE COURSES

1. Solid Geometry; Algebra (special topics).
Three hours weekly, first half-year. Dr. COBLE.

Plane Analytic Geometry.
Three hours weekly, second half-year. Dr. COBLE.

Exercises.
Two hours weekly, through the year.

2. Differential and Integral Calculus.
Three hours weekly, through the year. Professor HULBURT.

Exercises.
Two hours weekly, through the year.

3. Differential and Integral Calculus (special topics); Determinants; Solid Analytic Geometry; Projective Geometry.
Three hours weekly, through the year. Professor HULBURT.

Exercises.
Two hours weekly, through the year.

4. Differential Equations.
Three hours weekly, first half-year. Dr. COHEN.

Vector Analysis.
Three hours weekly, second half-year. Dr. COHEN.

Exercises.
Two hours weekly, through the year.

5. Dynamics.
Three hours weekly, through the year. Professor HULBURT.

Exercises.
Two hours weekly, through the year.

In connection with the three hours' class-room instruction, the instructor in each course meets his students weekly in a two-hour session, for the purpose of supplementary explanation and application of the principles taught in the class-room. This is the part of each course designated as "Exercises." It is not intended that these shall increase the amount of work required of the student, but rather that they shall aid him in the understanding and preparation of the work of the class.

Physics and Astronomy

The Physical Laboratory offers facilities in the form of apparatus, libraries, and machine shops to students who wish to pursue experimental investigations in any field of Physics. If the results of these are to be offered as a dissertation for the degree of Doctor of Philosophy, the work must be done under the general direction of the Director of the Laboratory, or of one of the other professors. For students carrying on experimental researches the laboratory is open daily, except Saturdays, from 9 a. m. until 5 p. m., and on Saturdays from 9 a. m. until 1 p. m.

Regular courses of instruction in both Physics and Astronomy are given in the form of lectures and laboratory exercises. They may be classified as Advanced and Elementary. The former are designed primarily for graduate students; the latter, for undergraduates.

Advanced Courses

Seminary and Journal Meetings

All advanced students meet with the instructors twice each week,—once in the Physical Seminary, and once for the discussion of the current Physical Journals.

During the year 1908-09 the questions to be considered in the Seminary will refer to the history of the development of the present knowledge of Electricity.

Lectures

1. General Physics. Professor Ames.

Four hours weekly, through the year.

This is a course of lectures in Mathematical Physics continuing for three years and including the subjects of Theoretical Mechanics, Elasticity, Hydrodynamics, Sound, Thermodynamics, Heat Conduction, Electricity and Mag-

netism, and Light. During the year 1908-09 the lectures will be on Electricity and Magnetism.

2. Selected Problems in Advanced Physical Optics. Professor WOOD.
Three hours weekly, through the year.

3. Experimental Demonstrations in Electricity and Magnetism. Professor WOOD.
Two hours weekly, through the year.

4. Applied Electricity. Associate Professor WHITEHEAD.
Two hours weekly, through the year.

5. Applied Electricity (*Advanced Course*). Associate Professor WHITEHEAD.
Two hours weekly, through the year.

6. Celestial Mechanics. Dr. J. A. ANDERSON.
Two hours weekly, through the year.

7. Cosmical Physics. Dr. J. A. ANDERSON.
Two hours weekly, through the year.

8. General Astronomy. Mr. L. E. JEWELL.
One hour weekly, through the year.

Laboratory Courses

1. Special Exercises in Physics in preparation for independent research; under the direction of Professors AMES, WOOD, BLISS, and WHITEHEAD.

2. Applied Electricity. Associate Professor WHITEHEAD.

3. Use of Astronomical and Astrophysical Instruments. Dr. J. A. ANDERSON and Mr. L. E. JEWELL.

For students following these courses the laboratory is open daily except Saturdays, from 9 a. m. to 5 p. m.; and the observatory is open every favorable night.

ELEMENTARY COURSES

Lectures

1. The Elements of Physics. Professor AMES.
Three hours weekly, through the year.

These lectures are based upon Ames's "Text-book of General Physics," and are intended to include the field of

Physics in an elementary manner. They presuppose a knowledge of the elements of plane trigonometry. This course is known as Physics 1.

2. Physical Optics. Dr. A. H. PFUND.
Three hours weekly, first half-year.

This course forms part of Physics 2 and is an extension of Physics 1. Special attention is given the subject of the applications of diffraction and interference methods in the several branches of Physics. A special laboratory course, as stated below, is arranged to accompany these lectures.

3. Elementary Mechanics. Professor BLISS.
Three hours weekly, second half-year.

This course is designed to serve as an introduction to Mathematical Physics, and students following it must have a knowledge of the elements of the calculus. It forms part of Physics 2.

4. Elementary Thermodynamics and Electricity. Professor BLISS.
Three hours weekly, through the year.

This course is a continuation of the second part of Physics 2. The lectures in Thermodynamics will continue until about Christmas. In the second part of the course the elementary mathematical theory of Electricity is given and exact methods in electrical measurements are explained. Special laboratory exercises, as stated below, accompany this course, which is known as Physics 3.

Laboratory Work

Although in the statements describing the following courses the number of hours per week is specified, all students are permitted and encouraged to devote as much additional time as possible to these laboratory exercises.

1. Introductory Course. Professor BLISS and Assistants.
Six hours weekly, through the year.

In this the students are taught methods of exact observation and measurement, and, as far as possible, they

study the fundamental phenomena of Physics in a quantitative manner. The exercises given in Ames and Bliss's "Manual of Experiments in Physics" serve as a basis for this work; the course accompanies Lecture Course 1.

2. Physical Optics. Dr. A. H. Pfund.
Six hours weekly, first half-year.

A carefully prepared series of experiments are performed dealing with the phenomena of Physical Optics. The students are also instructed in the use of the plane and concave grating and of the interferometer. This course accompanies Lecture Course 2.

3. Mechanics. Professor Bliss.
Six hours weekly, second half-year.

In this course the students are taught methods of exact measurement of time, length, and weight, as well as the use of the best methods for the determination of the various mechanical and elastic constants. The course accompanies Lecture Course 3.

4. Heat and Electricity. Professor Bliss.
Six hours weekly, through the year.

In the first part of this course the students are given instruction in the measurement of temperature by various means—mercury thermometers, thermo-couples, platinum resistance thermometers—and by radiation methods; and also in the study of such heat-phenomena as vaporization, liquefaction of gases, etc.

In the second part of the course special attention is given to instruction in the modern methods of measurement of various electrical quantities, and in the use of the most improved apparatus. Those desiring such instruction may do work with dynamos, motors, and transformers.

CHEMISTRY

The Chemical Laboratory is equipped with apparatus for nearly all kinds of scientific chemical investigations, and it is the policy of the department to provide every needed facility for promising investigations of a special or unusual character.

The laboratory is open daily, except Saturdays, from 9 a. m. until 5 p. m., and on Saturdays from 9 a. m. until 1 p. m.

ADVANCED COURSES

I. *Journal Meetings*

These meetings are held at 9 a. m. on Saturdays, throughout the year, and are under the direction of Professor REMSEN. Toward the end of the year, those who have been engaged in research give an account of the progress of their investigations.

II. *Lectures*

(*a*) ORGANIC CHEMISTRY

The lectures in Organic Chemistry are given by Professor REMSEN, except those upon certain chapters of the subject, which are given by Associate Professor ACREE. The course consists of three lectures weekly and extends over two years.

(*b*) INORGANIC CHEMISTRY

The course on this subject is given by Professor MORSE. It consists of two lectures weekly and extends over three years.

(*c*) PHYSICAL CHEMISTRY

Three lectures weekly are given throughout the year by Professor JONES.

(*d*) SPECIAL TOPICS IN CHEMISTRY

Short courses of lectures upon special topics are given each year by Professor JONES and Associate Professor ACREE.

III. *Laboratory Courses*

(*a*) QUALITATIVE ANALYSIS

This course is under the direction of Professor RENOUF and is designed to meet the needs of those graduate students whose knowledge of the subject is defective.

(*b*) QUANTITATIVE CHEMISTRY

Under the direction of Professor MORSE.

(*c*) PHYSICAL CHEMICAL METHODS

The routine work in this branch usually occupies from four to six weeks and is under the direction of Professor JONES.

(*d*) ORGANIC PREPARATIONS

Under the direction of Associate Professor ACREE. The required work occupies from ten to twelve weeks.

The student who is a candidate for the degree of Doctor of Philosophy must give evidence that he has a satisfactory knowledge of elementary chemistry and is familiar with laboratory methods, before he is permitted to undertake the advanced courses. These consist of lectures and laboratory exercises in (*b*) quantitative chemistry, (*c*) physical-chemical methods, and (*d*) organic preparations. The order in which these are taken is not fixed, but is arranged with reference to the convenience of the student.

Having completed the routine work of the laboratory, the student is assigned by Professor MORSE to one of the staff who proposes to him a subject for investigation,

which may be made the basis of the Doctor's dissertation,* and who thenceforth directs his work in the laboratory. It sometimes happens that the student has sound reasons for preferring some particular line of research, and this course is allowed, if the circumstances permit.

For those who do not look forward to the degree, the rules are less rigid. Any person admitted to the University as a special student is permitted to take any of the laboratory or lecture courses for which he is qualified by previous training. The department also provides laboratory facilities for experienced chemists who wish to come to it for the purpose of carrying out researches of their own.

UNDERGRADUATE COURSES

1. Introduction to General Chemistry.

(*a*) *Lectures and recitations, three hours weekly, through the year.* Professor RENOUF.

(*b*) *Laboratory work, six hours weekly, through the year.* Professor RENOUF, Dr. GILPIN, and assistants.

No previous knowledge of chemistry is required. The class-room work is based on Remsen's Chemistry (Briefer Course), and covers the field of inorganic chemistry, as far as possible. The last twelve class-room exercises give a sketch of organic chemistry, particularly for the benefit of those students whose study of chemistry is confined to the minor course. In the laboratory the student repeats the experiments performed in the class-room, and, in addition, has some practice in simple quantitative analysis. Each student is required to keep a note-book of his work.

2. Advanced Inorganic Chemistry and Qualitative Analysis.

(*a*) *Lectures and recitations, three hours weekly, through the year.* Dr. GILPIN.

(*b*) *Laboratory work, six hours weekly, through the year.* Professor RENOUF, Dr. GILPIN, and assistants.

The class-room work in the second year is intended to give a more thorough knowledge of chemical and physical-chemical laws, of the properties of chemical compounds, and of the principles of qualitative analysis. The laboratory work is in qualitative analysis and inorganic preparations.

*The length of time required for the completion of the dissertation work cannot be definitely stated, but, as a rule, from one year to one and one-half years should be allowed for it in the plans of the candidate.

3. Chemistry of the Compounds of Carbon.

(*a*) *Lectures and recitations, three hours weekly, through the year.* Dr. GILPIN.

(*b*) *Laboratory work, six hours weekly, through the year.* Professor RENOUF, Dr. GILPIN, and assistants.

The class-room work of the third year is devoted to the study of Organic Chemistry. The laboratory work is the making of organic preparations, but also includes practice in the analytic detection of organic substances and in analytical methods of value to those intending to study medicine. The text-book used is Remsen's Organic Chemistry.

This course is open only to those who have completed Courses 1 and 2.

4. Laboratory Work only.

Laboratory work, six hours weekly, through the year. Professor RENOUF, Dr. GILPIN, and assistants.

The laboratory work comprises advanced qualitative analysis, including technical methods, difficult inorganic preparations, and assaying. Those contemplating graduate work in chemistry will devote half of the year to the study of Volhard and Zimmermann's "Experiments in General Chemistry"; others may substitute quantitative analysis.

Undergraduate students of the fifth or Chemical-Biological group, whose principal subject is chemistry, will be required to follow the courses in chemistry during the first, second, and third years. Those who look forward to the study of medicine are advised to follow the courses in chemistry in the first and second years and to take the course on the chemistry of the compounds of carbon in their last year of residence.

The fourth-year course is intended for those students only who have satisfactorily absolved the courses of the first three years. It will be helpful to those who intend to follow graduate work in chemistry, and also to those who desire to make a practical use of their knowledge of chemistry after receiving the bachelor's degree.

Geology

The Geological Laboratory offers facilities in the form of collections, instruments, and libraries to students wishing to pursue special researches in geology and its allied subjects—paleontology, petrography, mineralogy, etc. Such researches may be carried on independently, or with the co-operation of the members of the geological staff; but, if the student intends to become a candidate for a degree, the work must be conducted under the general direction of the head of the department or his associates.

The laboratory, collections, and libraries are open to the advanced students daily, from 9 a. m. until 5 p. m.

Regular courses of instruction in geology are given in the form of lectures, laboratory exercises, and field work. The advanced courses are adapted to the requirements of students of maturity, the general courses to students desiring an elementary or cultural training in the subject. The former are designed primarily for graduate students in geology, the latter for undergraduates or students from other departments wishing a more general knowledge of the subject.

ADVANCED COURSES

Seminary and Journal Meetings

The advanced students meet with the instructors once each week for the discussion of current publications dealing with geology. During the latter half of the year papers are presented giving the results of researches conducted in the laboratory, or summarizing the present state of knowledge regarding geological questions of general interest.

Lectures

1. Historical Geology. Professor Clark.
Two hours weekly, through the year.

2. Systematic Paleontology. Professor CLARK.
Two hours weekly, through the year.

3. Economic Geology. Professor CLARK.
Two hours weekly, through the year.

4. Geological Physics. Professor REID.
Two hours weekly, through the year.

5. Exploratory Surveying. Professor REID.
Two hours weekly, through the year.

6. Advanced Mineralogy. Professor MATHEWS.
Three hours weekly, through the year.

7. Petrography. Professor MATHEWS.
Three hours weekly, through the year.

8. Paleontology. Mr. E. W. BERRY.
Two hours weekly, first half-year.

Laboratory Courses

Laboratory studies in advanced courses are carried on daily from 9 a. m. until 5 p. m. under the general direction of the professors in charge who are accessible at all times. An afternoon is devoted especially to each course when the subject matter is more fully developed by quizzes, demonstrations, etc.

1. Paleontology. Professor CLARK and Mr. BERRY.
Weekly, through the year.

2. Petrography. Professor MATHEWS.
Weekly, through the year.

3. Advanced Mineralogy. Professor MATHEWS.
Weekly, through the year.

4. Geological Field Methods. Professor MATHEWS.
Weekly, during the fall and spring.

UNDERGRADUATE COURSES

1. Descriptive Mineralogy and Physiography.
Three hours a week, through the year, with laboratory work.
Associate Professor SWARTZ.

This course consists of two parts. Part I includes an elementary presentation of crystallography, followed by a discussion of the more important economic and rock-forming minerals. Emphasis is laid upon laboratory work, which includes the study of crystal models and minerals, together with the identification of minerals by means of the blowpipe. This part is open to students who have taken chemistry.

Part II includes a discussion of the important features of the surface of the earth, and the consideration of the forces by which they have been produced. It is illustrated by maps, charts, and lantern views. Illustrative material is studied in the laboratory. Frequent excursions are made to neighboring points of interest where the principles of the science are illustrated in the field. Part II may be pursued independently of Part I.

2. Physical and Historical Geology.

Three hours a week, through the year, with laboratory work.
Associate Professor SWARTZ.

This course comprises the study of seas, lakes, and the interior forces of the earth, including volcanoes, earthquakes, and mountain-making, together with a general discussion of historical geology. The laboratory work includes the study of the common rocks and an examination of the forms of life of the chief geological periods collected by the student. Excursions are made in the fall and spring to points of interest for geological study. This course is illustrated by charts, maps, lantern views, and the abundant collections possessed by the University. A knowledge of Geology 1 is desirable, though not necessary, for the pursuit of this course.

3. Applied Geology.

Three hours a week, through the year, with laboratory work.
Professor MATHEWS.

This course is devoted to a discussion of the non-metallic minerals and rocks which are worked commercially. The knowledge of geology and mineralogy gained in the preceding courses is applied to the recognition of useful minerals, their mode of occurrence, properties, values, and uses. The main sources of coal, oil, clay, building-stones, abrasives, gems, etc., the way they are won, and their economic importance, are treated with more or less detail. The aim of the course is to supply such information regarding natural resources as an educated man should possess. The treatment of the technical questions of metallurgy or mining must be sought in technical schools.

State Scientific Bureaus connected with the Department.—Two scientific bureaus, established by the legislature and maintained at the expense of the State, are carried on in connection with the geological department. They are the Maryland Geological and Economic Survey and the Maryland State Weather Service. Professor Clark is the director of both these organizations, which are concerned with a study of the geology and physical features of the State of Maryland. The work is carried on under his direction mainly by the instructors and students

of the department. A State Forestry Bureau, of which Professor Clark is Executive Officer, has also been recently established.

Advantages afforded by Proximity to Washington.—Washington is less than an hour distant from Baltimore. This renders it possible to take frequent advantage of the facilities afforded by that city, where the officers of the various scientific bureaus and societies give the students of the university every opportunity to examine the rich collections and libraries under their control.

Field Work.—The area of the State of Maryland includes, notwithstanding its comparatively small size, a remarkable sequence of geological formations. The ancient rocks of the earth's crust, as well as those still in the process of deposition, are found, while between these wide limits there is hardly a geological epoch which is not represented. As a result most excellent facilities are afforded for a study of the various geological horizons. Excursions to points of interest are made during the autumn and spring months.

Zoology and Botany

The Biological Laboratory furnishes adequate rooms, with the usual microscopes, microtomes, aquaria, incubators, photomicrographic and electrical apparatus, for carrying on research in animal and plant morphology, embryology, and experimental zoology. For special investigations unusual apparatus will be obtained. It is expected that the ample grounds at "Homewood" will furnish facilities for experiments in breeding, and at present some space for aquaria, etc., is provided there. A collection of living plants in the botanical garden and conservatory, a physiological laboratory in the latter, and propagating grounds near by are available for experi-

also to study collateral literature. If deficient in preliminary training, he will be required to take some of the introductory work designated "undergraduate courses." Subsequently he selects, or is assigned, some topic that may yield problems to be studied and presented as a thesis or dissertation, when he has arrived at sufficient maturity in point of view. Work done in the laboratory is supplemented by work in the field and at the sea shore.

Journal Club.—All the graduate students take part with the instructors in a weekly discussion of the current literature.

Seminary.—Professor BROOKS will meet the advanced students for discussion of some of the fundamental problems of zoology.

Seminary in Experimental Zoology.—Professor JENNINGS. *Weekly from the beginning of the session until the spring recess.*

The work consists of the reading and discussion, by the members of the seminary, of some recent important book, or of the work of some investigator that has deeply affected zoology.

Theoretical Zoology.—Professor BROOKS. *Two lectures a week, from October 1 to May 1.*

Experimental Zoology.—Professor JENNINGS. *Three lectures a week, from the beginning of the session until February 1.*

During the year 1908-09 the work will be on the problems of individual and racial development,—the processes of reproduction, regeneration, growth, old age, variation, heredity, and evolution.

It is expected that a series of lectures will be given, by investigators at work in the university or elsewhere, on the results and methods of researches on particular problems in Experimental Zoology. The following can be announced at present:

mental work. A collection of carefully "fixed" and preserved alcoholic material of several hundred species of plants is available for histological and developmental study. The herbaria of the laboratory include the Schimper collection of European seed plants, the Field Club collection of local plants, the Fitzgerald collection of mosses, and smaller collections of fungi, marine algae, and Jamaican plants.

The library in the laboratory is adequately supplemented by the main library of the university and other libraries in the city, including the excellent botanical library of John Donnell Smith, whose courtesy has always made his library and herbarium available for advanced students.

Prompt publication of abstracts of results is provided for in the University Circulars. From time to time the results of extensive investigations in zoology are published by the University Press in a series of illustrated quarto monographs, edited by Professor Brooks. The Adam T. Bruce Fellowship is awarded to men capable of carrying on research in zoology. One of the graduate students in zoology may be appointed each year to occupy the University table at the marine laboratory of the U. S. Fisheries Bureau, at Woods Holl, Mass.

The laboratories are open from 9 a. m. to 5 p. m., and for necessary research in the evenings, but only by special permission.

ADVANCED COURSES

I. *Zoology*

Laboratory work in general zoology, morphology, and embryology is directed by Professor Brooks, assisted by Associate Professor Andrews. The work in experimental zoology is directed by Professor Jennings. In the first year, the student is required to verify the results of certain zoological memoirs selected to illustrate scientific principles and the application of technical methods; and

also to study collateral literature. If deficient in preliminary training, he will be required to take some of the introductory work designated "undergraduate courses." Subsequently he selects, or is assigned, some topic that may yield problems to be studied and presented as a thesis or dissertation, when he has arrived at sufficient maturity in point of view. Work done in the laboratory is supplemented by work in the field and at the sea shore.

Journal Club.—All the graduate students take part with the instructors in a weekly discussion of the current literature.

Seminary.—Professor BROOKS will meet the advanced students for discussion of some of the fundamental problems of zoology.

Seminary in Experimental Zoology.—Professor JENNINGS. *Weekly from the beginning of the session until the spring recess.*

The work consists of the reading and discussion, by the members of the seminary, of some recent important book, or of the work of some investigator that has deeply affected zoology.

Theoretical Zoology.—Professor BROOKS. *Two lectures a week, from October* 1 *to May* 1.

Experimental Zoology.—Professor JENNINGS. *Three lectures a week, from the beginning of the session until February* 1.

During the year 1908-09 the work will be on the problems of individual and racial development,—the processes of reproduction, regeneration, growth, old age, variation, heredity, and evolution.

It is expected that a series of lectures will be given, by investigators at work in the university or elsewhere, on the results and methods of researches on particular problems in Experimental Zoology. The following can be announced at present:

Professor W. E. KELLICOTT, of the Woman's College of Baltimore, on correlation and variation.

Dr. S. O. MAST, on the results of researches on the reactions of lower organisms to light, and on the problems of orientation.

Mr. J. FRANK DANIEL, on acclimatization and immunity in the lower organisms, with particular reference to the action of alcohol.

II. *Botany*

1. Journal Club and Seminary.

a. The Journal Club meets weekly through the year, in conjunction with the Zoological Journal Club.

b. The Botanical Seminary meets twice weekly, from December 1 to June 1. The seminary work of the year 1907-08 was devoted to a survey of recent work on plant breeding and to a study of the families of monocotyledons.

2. Lectures and Laboratory Work. Professor JOHNSON.

I. The Reproduction and Phylogeny of Plants.

a. *Three lectures weekly through the year.*

b. *Laboratory work associated with the lectures, twice weekly through the year.*

c. *Definite problems in field work assigned for study in the autumn and spring.*

II. The Histology and Physiology of Plants.

a. *Two lectures weekly from January* 1 *to June* 1

b. *Laboratory work twice weekly from January* 1 *to June* 1.

III. The History of Botany.

Two lectures weekly from October 1 *to December* 20.

The following themes will be discussed in successive years: The Theory of Sex in Plants, The Cell Theory, Growth and Movement in Plants.

UNDERGRADUATE COURSES

The collegiate courses in Zoology and Botany are known as Biology 1, Biology 2, Biology 3, and the Natural History Course.

Biology 1.

Six hours of laboratory work and three lectures or other exercises weekly, through the year. Associate Professor ANDREWS, Dr. COWLES, and assistants.

This introductory course is open to all students and may be taken without previous training in chemistry or physics. It may be taken profitably by students interested in political economy, history, psychology, or ethics; it will be found useful to those looking forward to the ministry; and it is required of all who are to enter the medical school.

a. General Biology. *Till March* 15.

In the laboratory each student studies with the microscope, or dissects, selected animals and plants from the more simple such as amoeba and yeast to the more complex such as the fern and frog. In the lectures some of the fundamental facts of Biology are emphasized.

b. Embryology. *After March* 15.

Each student studies the cleavage of the living frog's egg and the formation and transformation of the tadpole. Subsequently he studies the hen's eggs and the formation of organs in the embryo chick, learning to make his own serial sections, etc.

Biology 2.

Six hours of laboratory work and three lectures or other exercises weekly, through the year. Professor BROOKS and Dr. COWLES.

This course continues the training of Biology 1 in limited fields and is recommended to those who expect to study medicine or to specialize in any department of Biology.

a. Comparative Anatomy of Vertebrates. *Till March* 15.

The student dissects the skate, shark, codfish, nectrus, turtle, alligator, pigeon, and dog. The lectures emphasize the principles of animal morphology.

b. Bacteriology. *After March* 15.

The student learns the methods of handling, cultivating, and studying non-pathogenic bacteria. The practical work gives valuable training in careful laboratory methods. The lectures treat of bacteria from a biological point of view, as very important agents in natural processes.

Biology 3.

Six hours of laboratory work and three lectures or other exercises, weekly through the year.

a. Experimental Zoology.

First half-year. Professor JENNINGS.

This work presupposes training equivalent to Biology 1 and 2, and is designed for those having some special interest in Biology. The lectures will deal in 1908-1909 with the processes of individual and racial development,—reproduction, regeneration, variation, heredity and evolution. In the laboratory the student makes experiments and observations on such matters as the digestive processes of lower animals, on the effects of chemical and physical agents on animals, and the like. In suitable cases individual students will take up definite small problems. The laboratory work varies in different years, to correspond with the lectures.

b. Botany.

Second half-year. Professor JOHNSON.

The Structure and Function of Root, Stem, Leaf, Flower, and Fruit.

Three lectures weekly, laboratory work two afternoons a week, from February 1 to the end of the session.

This is a course for beginners, giving a general survey of the nature and activities of plants, the out-door work serving to give students some familiarity with native plants in the field. This course constitutes half of Biology 3, or it may be made a full course by those desiring it for general culture or as a preparation for further work in botany or in forestry.

Natural History.

Nine hours weekly, from February 1 to the end of the session. Associate Professors ANDREWS and GRAVE, with assistants.

This elementary course in Zoology and Botany is intended for those having no training in these subjects, and is chiefly a laboratory course. It is required of students in groups I, II, III.

Physiology

Facilities are offered in the Physiological Laboratory for special students, graduates in medicine and others, who are interested in special lines of investigation, and also for those who wish to follow courses leading to the degree of Doctor of Philosophy in Physiology or allied subjects.

Regular courses of instruction are given as follows:

1. Advanced lectures. Professor Howell.
   Irregular intervals, through the year.
2. Journal Club. Professor Howell.
   Weekly, through the year.
3. Seminary. Professor Howell.
   Weekly, through the year.
4. Physiology of the Animal Body. Professor Howell, Associate Professor Dawson, and Assistants.
   Lectures, three hours weekly, through the year; laboratory, six hours weekly, first half-year.
   [The laboratory course is repeated in the second half-year.]
5. Advanced Laboratory Work. Professor Howell and Associate Professor Dawson.
   This work is done individually.

Greek

The graduate instruction in Greek is directed by Professor Gildersleeve, in connection with the Greek Seminary, the plan of which is based on the continuous study of some leading author or some special department of literature.

The Seminary consists of the Director, Fellows, and Scholars, and such advanced students as have satisfied the Director of their fitness for an active participation in the work by an essay, a critical exercise, or some similar test

of attainments and capacity. All graduate students, however, may have the privilege of attending the Seminary exercises. Each regular member is required to take his turn in the work of the Seminary, and special fields of research are assigned according to progress or bent.

The cycle which has been followed for a number of years is made up of the Attic Orators, Plato, Aristophanes, and the Greek Historians. For example

1904-05. Attic Orators.	1906-07. Aristophanes.
1905-06. Plato.	1907-08. Greek Historiography.

The methods followed have been described in successive annual reports, which may readily be consulted.

During the next academic year the study of the Attic Orators will constitute the chief occupation of the members. There will be two meetings a week during the entire session. Especial attention will be paid to the development of language and style and to the antique canons of æsthetic criticism. The rhetorical works of Dionysios of Halikarnassos will be studied in connection with this course.

The student should possess the text of the orators (Teubner ed.), and the rhetorical works of Dionysios of Halikarnassos, edited by Usener and Radermacher. Blass's *Geschichte der Attischen Beredsamkeit* is an important auxiliary, Volkmann's *Rhetorik* will be found serviceable, and Jebb's *Selections from the Attic Orators* may be recommended as an introduction to the study. The various editions of select speeches of Demosthenes by Sandys are also helpful, and Rehdantz's *Indices* (Teubner) hold much valuable matter.

ADVANCED AND GRADUATE COURSES

1. Professor Gildersleeve will also conduct a course of Practical Exercises in Greek, consisting chiefly in translation at dictation from Greek into English and English into Greek, two meetings a week, from the beginning of the session to the first of January.

2. He will hold conferences on the Nemean and Isthmian Odes of Pindar, once a week after January 1.

3. He will also lecture on select chapters of Greek Syntax in its relation to style.

4. Associate Professor Miller will conduct readings auxiliary to the main study of the graduate students in Greek, twice a week throughout the session.

Notice of other courses is reserved.

UNDERGRADUATE COURSES

1. Xenophon, *Memorabilia* (selections).
Plato, *Apology.*
Herodotus (selections).
Three hours weekly, first year. Associate Professor MILLER.
Prose Composition.
One hour weekly, first year. Associate Professor MILLER.
Private Reading: Plato, *Crito;* Homer, *Odyssey* (two books).

2. Lysias (select orations).
Isocrates (selections).
Euripides (one play).
Prose Composition.
Three hours weekly, second year. Associate Professor SPIEKER.
Private Reading: Xenophon, *Hellenica* (book 1); Euripides, *Cyclops.*

3. Plato, *Phaedo.*
Lyric Poets.
Sophocles (one play).
Survey of Greek Literature.
Prose Composition.
Three hours weekly, third year. Associate Professor SPIEKER.
Private Reading: Elegiac and Iambic Poets; Aeschylus (one play).

4. Thucydides (book VII).
Lucian (selections).
Aristophanes, *Frogs.*
Two hours weekly, fourth year. Associate Professor SPIEKER.

Greek Life: Lectures and Conferences.
One hour weekly, fourth year. Dr. ROBINSON.
Private Reading: Demosthenes (select orations); Aristophanes, *Clouds.*

5. Aeschylus, Sophocles, Euripides (one play each).
Three hours weekly, through the year. Associate Professor SPIEKER.

LATIN

The most important organ of training is the Latin Seminary which meets twice a week throughout the year. It consists of the director, fellows, scholars, and such advanced students as shall give the director satisfactory proof of their ability and training. Any graduate student is at liberty to attend the Seminary exercises, but each regular member is required to take his turn in the work. Each year some author or group of authors in a given department of literature is made the centre of study. The subjects treated during the last three years are as follows:

1905-1906. The Roman Epic, especially Vergil.
1906-1907. The Roman Drama, especially Plautus and Terence.
1907-1908. The Roman Satire, especially Horace and Juvenal.

In addition to the regular work of the Seminary, courses of lectures are given every year by the director and from time to time by other qualified persons. A Journal Club, consisting of the instructors and graduate students in Greek, Latin, and Classical Archæology, meets once a week to report and discuss recent publications and topics of general interest in the field of Classical Philology.

During the academic year of 1908-1909 the attention of the Seminary will be given to the Roman Historians, and the centre of this work will be Livy and Tacitus.

The student will do well to provide himself in advance with complete texts of Livy, Tacitus, Sallust, Caesar, Suetonius, Ammianus Marcellinus, and the Scriptores Historiae Augustae (all published by Teubner or in the Bibliotheca Oxoniensis). H. Peter's Historicorum Romanorum Fragmenta (editio minor, Teubner) should also be procured and Volkman's Rhetorik will be found very serviceable.

ADVANCED AND GRADUATE COURSES

1. Throughout the year Professor Smith will lecture once a week on the Roman Historians exclusive of Livy and Tacitus.

2. He will also hold a conference once a week during the first half-year on Roman Rhetoric.

3. During the second half-year he will lecture once a week on the rhetorical element in the Roman historians.

4. Professor Mustard will lecture once a week throughout the year on the history and development of Pastoral Poetry as a department of literature.

5. The advanced students will meet once a week throughout the year for the rapid reading of the Roman historians.

UNDERGRADUATE COURSES

1. Livy (selections); Vergil, *Fourth Georgic.*
Three hours weekly, first half-year. Professor MUSTARD.
Catullus (selections); Juvenal (selections).
Three hours weekly, second half-year. Professor MUSTARD.
Private Reading: Cæsar, *Bellum Civile* (book I); Vergil, *Aeneid* (selections); Cicero, *Cato Maior.*
Prose Composition.
Weekly, through the year. Professor MUSTARD.

2. Plautus (one play); Tacitus, *Annals* (selections).
Three hours weekly, first half-year. Professor MUSTARD.
Horace (selections).
Three hours weekly, second half-year. Professor MUSTARD.

Private Reading: Terence (one play); Cicero, *Letters* (selections).

Prose Composition: exercises from time to time.

3. Lucretius (selections); Vergil, *Georgics*, I-II.

Two hours weekly, first half-year. Professor MUSTARD.

Tibullus, Propertius, and Ovid (selections); Martial (selections).

Two hours weekly, second half-year. Professor MUSTARD.

Roman Literature (with reading of selected passages).

Weekly, through the year. Professor SMITH.

Private Reading: Cicero, *First Tusculan;* Pliny, *Letters*, book VI.

Prose Composition: essays and exercises from time to time.

4. Petronius, *Cena Trimalchionis;* Apuleius, *Metamorphoses* (selections).

Two hours weekly, first half-year. Professor WILSON.

Seneca, *Medea;* Valerius Flaccus (selections).

Two hours weekly, second half-year. Professor WILSON.

Private Reading: Fragments of Early Latin; Suetonius, *Augustus*; Quintilian (book X).

Roman Life: lectures and conferences.

Weekly, through the year. Professor WILSON.

Prose Composition: essays from time to time.

5. Ovid, *Metamorphoses:* readings and conferences; Cicero, *De Oratore*, book I: study of the principles of Roman Rhetoric and Literary Criticism.

Three hours weekly, through the year. Professor SMITH.

Courses 2, 3, and 4 may be taken only by those who have pursued the courses preceding them. Course 5 may be taken concurrently with course 4.

Roman Literature (course 3) and Roman Life (course 4), each one hour weekly, are open to all students and taken together are counted as half a course, and with the course in Greek Life (Greek 4) count as a full course.

Classical Archaeology and Art

The work in Classical Archæology and Art is carried on by means of a seminary and the courses which are named below. The archæological material in the possession of the university includes good collections of Greek and Roman inscriptions, marbles, bronzes, vases and other terra cottas, coins, gems, etc., which not only serve the purpose of illustration, but also form the basis of original investigation. These are supplemented by squeezes, photographs, and lantern slides, as well as by the casts belonging to the university and to the Peabody Institute.

SEMINARY AND ADVANCED COURSES

The subjects treated in the seminary or presented in lectures vary from year to year, so that in three or four years of continuous residence students are brought into contact with the principal fields of archæological research. These subjects include Greek and Roman architecture, sculpture, coins, gems, bronzes, and terra cottas, Mycenæan civilization, Greek vase painting, and Latin Palæography. The following courses are offered in the year 1908-09:

1. Archæological Seminary. Selected topics in Latin and Greek Epigraphy. Professor Wilson and Dr. Robinson.

Two hours weekly, through the year.

2. The Topography and Monuments of Rome, with especial reference to the *Forum Romanum* and the imperial *Fora*. Professor Wilson.

Weekly, through the year.

3. An introduction to Latin Epigraphy, with practical exercises in the interpretation of inscriptions from original stones. Professor Wilson.

Weekly, through the year.

4. Pausanias and the Topography of Athens. Dr. ROBINSON.

Weekly, through the year.

5. Greek Alphabets, with practical exercises in the interpretation of the Epichoric inscriptions. Dr. ROBINSON.

Weekly, through the year.

6. Classical Journal Club, in which the current literature of the subject is reported and discussed. Professors SMITH and WILSON, Associate Professor MILLER, and Dr. ROBINSON.

Weekly, through the year.

UNDERGRADUATE COURSES

1. Outlines of Classical Archæology; lectures and conferences. Professor WILSON and Dr. ROBINSON.

Three hours weekly, through the year.

This course is intended to furnish a rapid survey of the principal fields of Greek, Etruscan and Roman archæology and art. Knowledge of Latin and Greek is not required.

2. The Private Life of the Romans. Professor WILSON.

Weekly, through the year.

3. The Private Life of the Greeks. Dr. ROBINSON.

Weekly, through the year.

Courses 2 and 3 are parts of Latin 4 and Greek 4, respectively, but may be pursued by any student of the University. Taken together they count as half a course, and with the course in Roman Literature (Latin 3) as a full course.

SANSKRIT AND COMPARATIVE PHILOLOGY

Courses of instruction, directed by Professor Bloomfield, with the assistance of the Fellow or the Scholar in Sanskrit, are provided in the Indo-Iranian languages (Vedic and Classical Sanskrit, Pāli and Prākrit, Avestan and Old Persian), in Comparative Grammar of the Indo-European languages, in historical Ethnology of the Indo-European peoples, and in general Linguistic Science.

During recent sessions courses in the Lithuanian language and literature were given; these also will continue to form a regular feature of the work of the university.

These courses aim to meet the wants of those who wish to devote themselves to the study of these branches exclusively and for their own sake, *i. e.*, those who wish to become specialists in Sanskrit Philology or Comparative Philology; and also the wants of students of languages in general, who wish to obtain a broader linguistic basis for special studies in other departments of philology.

The advanced work aims especially to meet the wants of those who wish to make Indian Philology or Comparative Philology their special study. This work centres in the Sanskrit Seminary and not infrequently involves the use of Sanskrit manuscripts.

A prolonged course in Sanskrit, involving two lectures a week during two years and attendance in the Sanskrit Seminary for a half-year (one hour a week), is planned, so as to furnish a good knowledge of Classical Sanskrit and to include an introduction into the dialect of the Vedas. This amount of work represents material sufficient for the first subsidiary subject for the degree of Doctor of Philosophy. A course in the same study for one and a half years, involving two hours a week, is the amount required for a second subsidiary subject leading to the same degree.

A synopsis of the courses offered during past years may be presented under the following heads:

I. Courses in the general principles of comparative philology, or linguistic science, and on special chapters thereof; lectures on ethnology and the history of religions.

II. Courses in the general comparative grammar of the Indo-European languages; comparative grammar of Sanskrit and Avestan; comparative study of Indo-European accentuation; comparative study of Greek, Latin, Sanskrit, and Teutonic, including vocalism, consonantism, noun-formation, and inflections.

III. The Vedic, Sanskrit, and Prākrit dialects; Rig-Veda; Atharva-Veda; literature of the Brāhmanas and Upaniṣads. The law books of Manu and Yājñavalkya; the Drama Çakuntalā and

introduction into Prākrit; Hitopadeça, Kathāsaritsāgara, and Nala. Sanskrit grammar and prose composition.

IV. The Pāli language and Buddhist literature.

V. The Avestan language and the sacred books of the Avesta.

VI. The Lithuanian language and literature.

The following courses, in charge of Professor Bloomfield, may be stated under three heads:

A. *Linguistic Science and Comparative Grammar of the Indo-European Languages.*

1. The elements of Linguistic Science, with an account of the Ethnology and Religions of the Indo-European peoples. *Weekly, through the year.*

2. Comparative grammar of the more familiar Indo-European languages (Greek, Latin, German, and Sanskrit): The phonetics and history of the consonants. *Weekly, through the year.*

B. *Indo-Aryan Philology.*

3. Vedic Seminary: The literature of the Brāhmanas and the Upaniṣads. *Weekly, through the year.*

4. The elements of Vedic philology: Vedic grammar, metres, and interpretation of selected hymns of the Rig-Veda. *Weekly, second half-year.*

5. Beginner's course in Sanskrit: grammar (Whitney's Sanskrit Grammar) and interpretation of an easy text (Lanman's Reader). *Twice weekly, through the year.*

6. Selections from the Hitopadeça and the Law-Book of Manu (second year's course in Classical Sanskrit). *Twice weekly, first half-year.*

C. *Other Indo-European Languages.*

7. Introduction to the Lithuanian Language and Literature. *Weekly, through the year.*

NOTE—No knowledge of Sanskrit is presupposed for courses 1, 2, 5 and 7. Course 1 sketches briefly the history of the Science

of Language; presents a systematic account of the ethnology and religions of the Indo-European peoples; deals with the principles that govern the life and growth of language, and finally treats of the origin of language. Course 2 is intended as an elementary introduction into the methods and results of the Comparative Grammar of the more important Indo-European languages.

Oriental Seminary

The various courses are adapted to the requirements of four classes of students, namely: (*a*) students of theology wishing to obtain a thorough acquaintance with the sacred tongue and its sister idioms as a means of elucidating Scripture and problems of the comparative history of religion; (*b*) students of linguistics intending to make comparative grammar of the Semitic languages their specialty; (*c*) students of Oriental history and archæology desirous of drawing directly from the original sources; (*d*) persons looking for instruction in the living Oriental languages (as modern Arabic, Turkish, Persian, Amharic, Malay, Tagalog, etc.) for practical purposes.

A room has been set apart containing a well-equipped working library for all the branches of Oriental research (including the library of the late Professor A. Dillmann, of Berlin, the Leopold Strouse Semitic Library, a special collection of works on the dialects of the Philippine Islands, etc.), and some advanced students are usually present to help in the preparation for the recitations conducted by the Director of the Seminary, and to furnish any other aid that may be desired. Near the Dillmann Library, on the same floor, are some archæological and antiquarian collections, including the Cohen Collection of Egyptian Antiquities, the Sonneborn Collection of Jewish Ceremonial Objects, collections of Hebrew and other Oriental manuscripts, Babylonian seal-cylinders and clay tablets, etc.

The following courses are offered for the academic year, 1908-09:

Journal Meeting

30. Journal Meeting. Professor HAUPT. *Tuesday,* 3 *p. m.*

ENGLISH

GRADUATE COURSES

In the graduate courses the subject of English is studied with reference to the historical and technical aspects of linguistic and literary science. The usual sequence of courses enables a student, in three or four years, to study with precision the important departments of grammar and of literature, and to become trained in the processes of original investigation. Instruction is imparted by lectures, by freer conferences, by the methods of the Seminary, and by class-room recitation. A Journal Club is conducted for the purpose of supplementing the regular courses with reports of the current work of scholars.

1. *English Seminary,*

Graduate students are admitted to the Seminary as soon as they have satisfied initial requirements for independent research.

In the academic year 1908-09, the Seminary will be engaged in the study and investigation of the following subjects:

(*a*) The Works of Chaucer. *First half-year.*

(*b*) The Poetry of Byron and Shelley. *Second half-year.* The Seminary will be conducted by Professor BRIGHT. *Tuesday and Thursday,* 3-5 *p. m.*

2. Lectures on Historical Grammar, Versification, and Literary Criticism. Professor BRIGHT. *Monday,* 11 *a. m.*

3. Interpretation of selected texts. Professor BRIGHT. *Tuesday and Thursday,* 12 *m.*

4. The Journal Club of the English Seminary. Professor BRIGHT. *Alternate Fridays,* 3-5 *p. m.*

5. Lectures on the English Poetry of the Seventeenth Century. Professor BROWNE. *Monday,* 12 *m.*

6. Lectures on the English Poetry of the Eighteenth Century. Professor BROWNE. *Wednesday,* 12 *m.*

7. Professor FELIX E. SCHELLING, of the University of Pennsylvania, will give a course of lectures on the Works of Shakespeare. *January and February.*

UNDERGRADUATE COURSES

Introductory courses in (*a*) Rhetoric and English Composition, (*b*) Platform Speaking and Forensics, and (*c*) English Literature, are prescribed for all undergraduate students. For those who may wish to continue their study in any of these departments, elective courses are provided in the various forms of discourse and in the more important periods of English and American literature. Further practice in debating is provided in connection with the elective course in exposition and argument, and in the annual inter-class and inter-collegiate debates.

English Composition

1. Rhetoric and English Composition.

Theory, based upon text-books, lectures, and discussions; critical study of prose writers; frequent practice in writing. This course is prescribed during the first year.

Three hours weekly, through the year. DR. FRENCH and DR. LICKLIDER.

1*a*. English Composition.

This course is prescribed during the second year. Students who have attained a mark of "8" on the work of the first year are excused from this course.

One hour a week, through the year. DR. LICKLIDER.

2. Description and Narration.

Readings in standard prose. Practice in writing.

Two hours weekly, through the year. Professor GREENE.

3. Exposition and Argument.

During the first term, the theory of exposition, with frequent practice in expository writing. During the second and third terms, the theory of argument; practice in writing; platform speaking and debate.

Two hours weekly, through the year. Dr. FRENCH.

Public Speaking

1. Reading and Platform Speaking.

In this course attention is paid to correct habits of breathing and to enunciation and expression. The course is prescribed during the second year.

One hour a week, through the year. Dr. FRENCH.

2. Public Speaking.

The principles of argumentation; practice in argumentative writing and in debate; parliamentary procedure. This course is prescribed during the third year.

One hour a week, through the year. Dr. FRENCH.

Note. Additional practice in platform speaking and in debate is provided in English Composition 3. A more specific statement respecting these courses is made on a subsequent page.

English Literature

1. English Literature: introductory course.

The class will become acquainted with the course of English Literature from the seventh century until about 1600. Much of the poetry of Chaucer, Spenser, and Shakespeare will be read in the class-room and in private reading. This course is prescribed during the second year.

Three hours weekly, through the year. Professor GREENE.

2. English Literature, 1600-1744.

First half-year: English Literature from 1600 to 1660; special attention will be given to the English Bible and to the works of Bacon and Milton.

Second half-year: From the Restoration to the death of Pope (1660-1744); the study will be directed chiefly to the writings of Dryden, Addison, Steele, Swift, and Pope.

Three hours weekly, through the year. Professor GREENE.

3. English Literature, 1798-1892.

First half-year: English Literature from the publication of the *Lyrical Ballads* to the death of Coleridge (1798-1834); the study will be directed chiefly to the writings of Wordsworth, Coleridge, Keats, Shelley, Byron, and Scott.

Second half-year: The period of the romantic reaction in English Literature, 1770 to recent times.

Three hours weekly, through the year. Professor BROWNE.

6. English. (Fourth Year of Group II).

First half-year: Anglo-Saxon.

Second half-year: Middle English and Early Scottish Poets.

Three hours weekly, through the year. Dr. LICKLIDER and Professor BROWNE.

GERMAN

Under this head are included German Language and Literature, and subjects in the wider field of Germanic Philology. Regular instruction, through seminary and lectures, is given in German Literature and in Gothic, Comparative German Grammar, Old High German, and Middle High German; while occasional courses are offered in Old Norse, Old Saxon, and Old Frisian.

ADVANCED COURSES

Seminary

The library of the German Seminary, to which all advanced students have the fullest access, is open, Mondays to Fridays, from 9 a. m. to 5 p. m., and Saturdays from 9 a. m. to 1 p. m. The Seminary treats, in successive half-years, some theme from the period of German Classicism or Romanticism, and a subject from the literature of Middle High German. During the year 1908-09 the Seminary

will meet three times weekly. The subject for the first half-year will be the period in German Classical Literature from Goethe's Italian Journey to the death of Schiller, and for the second half-year the poems of Walther von der Vogelweide. The Seminary will be conducted by Professor WOOD.

Students are requested to procure: Lachmann, *Gedichte Walthers*, 5. Ausg., Berlin, 1875; Wilmanns, *Gedichte Walthers von der Vogelweide*, 2. Ausgabe (Germanistische Handbibliothek I), Halle, 1873.

Germanic Society

The Germanic Society, which includes as members all the instructors and advanced students in German, meets fortnightly. Before it are presented not only reports on articles in current journals, but also successive results of studies by the members. The chief object of the Society is to foster and guide the aptitude for more sustained individual investigation than the collective work of the Seminary offers scope for.

Lectures

1. Gothic and the Elements of Comparative German Grammar. Professor COLLITZ.

Two hours weekly, through the year.

Students are requested to procure Braune's *Gotische Grammatik* (6. Auflage, Halle, 1905).

2. Old High German. Professor COLLITZ.

Two hours weekly, second half-year.

Students should procure Braune's *Abriss der althochdeutschen Grammatik* (4. Auflage, Halle, 1906) and the same author's *Althochdeutsches Lesebuch* (6. Auflage, Halle, 1907).

3. Old Saxon. Professor COLLITZ.

Weekly, second half-year.

Students should be provided with Holthausen's *Altsächsisches Elementarbuch* (Heidelberg, 1899).

4. Old Frisian. Professor COLLITZ.

Weekly, first half-year.

Heuser's *Altfriesisches Lesebuch mit Grammatik und Glossar* (Heidelberg, 1903) should be in the hands of the students. The chief object of the course will be to point out on the one hand the close relation between Old Frisian and Anglo-Saxon, and on

the other hand the bearing of Old Frisian upon the language of the Heliand.

5. Middle High German: Introductory Course. Professor COLLITZ.

Two hours weekly, first half-year.

The elements of Middle High German grammar will be studied, and selections read from Bachmann's *Mittelhochdeutsches Lesebuch* (3. Auflage, Zürich, 1904), Paul's *Mittelhochdeutsche Grammatik* (6. Auflage, Halle, 1904) is recommended.

6. German Literature in the Seventeenth Century. Professor WOOD.

Two hours weekly, first half-year.

The literary reform in the first quarter of the Century will be discussed, and particular attention will be paid to the old and new metrical canons, and to questions in Poetics. Selected poems of Weckherlin and Opitz will be read. As the best representative work of the period in prose, Grimmelshausen's *Simplicissimus* will then be studied.

7. The German Romantic School. Professor WOOD.

Two hours weekly, first half-year.

The beginnings of Romanticism in German Literature will be studied in works of Tieck, Friedrich and August Wilhelm Schlegel and Novalis. The relation of the German classicists (Goethe) to the new literary movement will then be considered, and this will be followed by the reading of representative works of the Romantic School.

8. Gerhart Hauptmann and the Contemporary German Drama. Professor WOOD.

Two hours weekly, second half-year.

Special Courses.

1. Scientific German. Dr. KURRELMEYER.

Two hours weekly, through the year.

2. Historical German. Dr. ROULSTON.

Two hours weekly, through the year.

3. German Conversation. Mr. HOFMANN.

Weekly, through the year.

NOTE.—Classes 1 and 2 are for graduates who lack the ability to read German at sight.

UNDERGRADUATE COURSES

German Elements.

Vos, *Essentials of German;* Gerstäcker, *Germelshausen;* Keller, *Kleider machen Leute;* Wilhelmi, *Einer muss*

heiraten; von Wildenbruch, *Das edle Blut;* Prose Composition; Grammar.

Four hours weekly, through the year. Dr. KURRELMEYER.

This course is intended only for students who have matriculated in Greek. For such students, it absolves the requirements in German; other students must absolve course 1.

1. Prose Reading: Baumbach, von Ebner-Eschenbach, Fulda, Keller, Sudermann.

Three hours weekly, through the year. Dr. ROULSTON.

In case of necessity this class will meet in two sections.

Prose Composition.

Weekly, through the year. Professor WOOD.

Private Reading.

2. Classical Authors: Schiller, *Maria Stuart, Die Jungfrau von Orleans;* Goethe, *Hermann und Dorothea.*

Two hours weekly, through the year. Dr. ROULSTON.

Prose Composition.

Weekly, through the year. Dr. ROULSTON.

Private Reading.

3. Goethe, *Faust, Tasso, Iphigenie.*

Two hours weekly, through the year. Professor WOOD.

History of Literature: Classical Period. Lyrics and Ballads.

Weekly, through the year. Dr. ROULSTON.

The work in Goethe and in the History of Literature, etc., may be taken separately.

4. Contemporary Literature, in rapid readings.

Three hours weekly, through the year. Professor WOOD and Dr. KURRELMEYER.

This course is open to students who have completed Course 1.

7. German Conversation.

Weekly, through the year. Mr. HOFMANN.

Romance Languages

The department of Romance Languages offers facilities for work in manuscript sources and palæography, in literature (old and modern), in language (phonetics, morphology, history, syntax, dialects), and in Popular Latin. For students who desire the degree of Doctor of Philosophy, three years are usually required (in the principal subject), under the direction of the various professors in the department. The work is confined almost entirely to the three principal Romance languages (French, Spanish, and Italian), in the literatures and languages of which special attention is paid to the origins.

Instruction is given in lectures and regular class exercises, the former being supplemented by subjects for special investigation assigned to the student. For each of the languages noted above, a seminary meeting is held once a week. In French the seminary for the old literature alternates with that for the modern literature. A meeting of the Romance Club is also held weekly, when original papers are read and reviews of recent journals presented. The subjects for work during the academic year 1908-09 are as follows:

Three hours weekly, through the year. Dr. SHAW.

2. Grandgent, *Italian Grammar;* Selections from Carducci, Manzoni, Ariosto, Boccaccio, Petrarch, Dante.

Three hours weekly, through the year. Dr. SHAW.

History

Facilities for research are offered in the principal fields of history. Special attention is given to methods of investigation and each advanced student comes under the personal direction of the instructors in his chosen field. This supervision is obtained through seminary meetings and frequent private consultation.

In addition to the library of the university, students make use of the admirable collections of source material in the Peabody Library and the Maryland Historical Society, and are in constant touch with the great resources of the Library of Congress and the departments in Washington.

GRADUATE COURSES

European History. The courses in European history direct attention to the social, economic, and constitutional development of European peoples. The subjects follow in consecutive order, the topics for each year forming a complete and independent group. The series requires three years for completion and offers opportunity for close study of selected portions of the mediæval and early modern history of the Continent. Every third year a course on non-American contemporary history is given, particularly since 1871, for the purpose of arousing interest in the historical aspects of recent events and of showing some of the characteristics of modern political, social, and economic life in other countries than America. A weekly seminary is held for the study of problems in European history and institutions.

Courses in Latin palæography and in French palæography are given in their respective departments.

English History. The course in English constitutional history extends over a period of three years, tracing the origin and growth of the English constitution from earli-

est times to the present century. The treatment allows for the consideration of closely allied institutional and economic aspects of the subject. A separate course on the historical development of English common and statute law is also given. A weekly seminary is held for the study of texts and the examination of problems raised in the lectures. Special attention is paid to collections of documentary material.

American History. The courses in American history begin with the history of British colonization in America and deal with the constitutional and economic growth of the colonies, and the constitutional and political history of the United States after 1783. A weekly seminary is held for research in special subjects in American history.

Ancient History. The constitutional history of Greece and Rome is supplemented by lectures on the Roman Law. Certain portions of Oriental History are treated in the departments of Semitics and Sanskrit.

Historiographical Studies. Every second and third year courses are given in English and American historiography.

Special Lectures. The Albert Shaw Lectures on Diplomatic History are given annually by investigators in selected fields of American and foreign relations. The scope of the lectures is not confined to the United States, but lectures on European diplomatic history will also find their due place.

The James Schouler Lectures on History and Political Science are given annually by lecturers of promise or prominence upon topics indicated in the title of the lectureship. These lectures are open to the public as well as to the students and members of the University.

Professor Edward L. Stevenson, of Rutgers College, will give a short course on the Geography of the Fifteenth and Sixteenth Centuries.

Other lectures of interest to the students of this department, either open to the public or designed for class instruction, are given from time to time by distinguished scholars outside the University. These lectures are in part provided for from the income of the fund left by the late Professor Herbert B. Adams.

Historical and Political Science Association. This monthly meeting of the instructors and students of the departments of History, Political Economy, and Political Science affords an opportunity to hear addresses from prominent specialists, to consider important movements and undertakings, and to present critical reviews of recent publications in the fields of history, political economy, and political science.

For the year 1908-09 the courses will be as follows:

Professor VINCENT.

1. Europe. Period of the Renaissance.
   Two hours weekly, first half-year.
2. Europe. The Ancient Regime.
   Two hours weekly, second half-year.
3. Seminary in European History.
   Two hours, alternate weeks.

Professor ANDREWS.

1. Constitutional History of England, 1400-1688.
   Two hours weekly, through the year.
2. American Colonial History, to 1765.
   One hour weekly, through the year.
3. Seminary in English History.
   Two hours, alternate weeks.

Associate Professor BALLAGH.

1. History of the United States, 1765-1789.
   Two hours weekly, through the year.
2. Seminary in American History.
   Two hours, alternate weeks.

Dr. STEINER.

History of English Law.
One hour weekly, through the year.

Mr. MAGOFFIN.

1. Constitutional History of Rome.
   One hour weekly, through the year.
2. The Elements of Roman Law.
   One hour weekly, through the year.

UNDERGRADUATE COURSES

1. History of Greece and Rome.

The political and constitutional history of Greece and Rome, approached through the translated texts of Herodotus, Thucydides, Suetonius, Tacitus, and others, with the aid of modern authorities.

Three hours weekly, through the year. Mr. MAGOFFIN.

2. European History (General History).

From the decline of the Roman Empire to the nineteenth century, dealing with the Romano-Barbarian kingdoms, the empire of Charles the Great, feudalism, the crusades, empire and papacy, renaissance, the Protestant revolutions, the religious wars, eighteenth century states and the doctrine of the balance of power, the French Revolution, the Napoleonic period, and the reorganization of Europe in the nineteenth century.

Three hours weekly, through the year. Professor C. M. ANDREWS.

3. English History.

Chiefly constitutional and political, dealing with the origins and development of parliamentary institutions, the relations of England with continental Europe, and the expansion of the British Empire. Open to students who have had or are taking History 2 or Political Economy 1.

Three hours weekly, through the year. Professor VINCENT.

4. American History.

Colonial history and institutions, the formation of the Union, the development of constitutional government and law, the growth of foreign policy, the expansion of the nation. Emphasis will be laid on the national period. Open to students who have had History 2 and 3 or Political Economy 1.

Three hours weekly, through the year. Associate Professor BALLAGH.

Political Economy

GRADUATE COURSES

The graduate instruction in Political Economy is designed primarily to meet the needs of advanced students preparing for a professional career in economic science. The courses afford systematic instruction in general economic principles, intimate acquaintance with special fields of economic activity, and, most important of all, knowledge of and ability to employ sound methods of economic research. The work centres in the Economic Seminary, the membership of which is limited to the most advanced students, and the primary design of which is to develop scientific research in economic study and investigation.

Formal graduate instruction is offered in Economic Theory and in Applied Economics, by parallel courses of lectures throughout the year. The particular topics treated vary from year to year. In 1906-07 Professor Hollander lectured two hours weekly on the principles of political economy and two hours weekly on American municipal finance. During the year 1907-08 attention was given, in the course on economic theory, to the development of economic doctrine since Adam Smith. In the course on applied economics, careful study was made of American commonwealth finance. Dr. Barnett lectured during the first half-year on the comparative study of banking systems, and during the second half-year on the history of American banking. Special courses of lectures were given during the year by Mr. John M. Glenn, Director of the Russell Sage Foundation, on Problems of Relief; by Mr. Logan G. McPherson, of New York, on Railway Transportation; by Dr. A. M. Sakolski, of the U. S. Bureau of Corporations, on Corporation Accounting; by Dr. T. W. Glocker, on Socialism.

The courses offered for 1908-09 are as follows:

1. The Economic Seminary.

Professor HOLLANDER and Associate Professor BARNETT. *Two hours weekly, through the year.*

The work of the year will continue to be a systematic study of the history, structure, and activities of labor organizations in the United States.

2. Economic Thought before Adam Smith.

Professor HOLLANDER. *Two hours weekly, through the year.*

During the first half-year a careful historical survey will be made of the beginnings of English economic thought. During the second half-year attention will be given to the economic thought of the eighteenth century.

3. The Theory and Practice of Exchange.

Professor HOLLANDER. *Two hours weekly, through the year.*

During the first half-year a critical study will be made of the theory of money and credit. During the second half-year the institutions of the money market will be examined.

4. Statistical Methods.

Associate Professor BARNETT. *One hour weekly, through the year.*

During the first half-year, the historical development of statistics will be considered. During the second half-year, the methods of statistical investigation will be treated.

Special courses of lectures will be given by non-resident lecturers upon such practical economic problems as charities and correction, railway transportation, industrial organization.

A reading class is organized yearly by the more advanced students of the department for the co-operative study of economic texts and for the critical discussion of current economic literature.

In co-operation with the department of history and political science, opportunity is offered in the Historical and Political Science Association for the presentation and discussion of original papers in economic science by instructors and invited speakers, and for the review by students of current publications of importance in these several fields.

UNDERGRADUATE COURSES

Undergraduate instruction in Political Economy is given by Professor HOLLANDER and Associate Professor BARNETT. The course of instruction covers three years, as follows:

1. (*a*) Economic History.
   Three hours weekly, first half-year.
   (*b*) Elements of Economics.
   Three hours weekly, second half-year.
2. (*a*) Finance.
   Three hours weekly, first half-year.
   (*b*) Money and Banking.
   Three hours weekly, second half-year.
3. (*a*) Statistical Methods.
   Three hours weekly, first half-year.
   (*b*) History of Economic Theory.
   Three hours weekly, second half-year.

POLITICAL SCIENCE

GRADUATE COURSES

The graduate work in Political Science has for its aim the preparation of advanced students for professional and original work in the fields of Constitutional Law, International Law and Diplomacy, and Political Philosophy. It seeks also to supply the necessary training for those desiring to enter the higher branches of the public service, and to furnish a broad and philosophical equipment to those who expect later to pursue the study and practice of the law.

Seminary

In addition to the Historical and Political Science Association, at which the students of the departments of History, Economics, and Political Science meet jointly

for the presentation of papers by the instructors and by invited speakers, a weekly Seminary is held by Professor Willoughby at which reports upon special subjects are read by the students and discussed.

Journal Club

A fortnightly meeting of the advanced students, conducted by Professor Willoughby, is held for the discussion of current political literature—books and periodicals.

Lectures

The lectures are so arranged as to give three or more years of continuous instruction, covering the following subjects: The Theory of the State (being a general introduction to the study of Constitutional and International Law), Foreign Constitutional Law, United States Constitutional Law, the Legal Aspects of Economic and Industrial Problems, the History of Political Theories and of Political Literature, and Historical Jurisprudence.

During the year 1908-09 the following courses will be given:

1. Introduction to the Study of Public Law.

   Professor WILLOUGHBY. *Two hours weekly, first half-year.*

   This course deals with the nature of the State, constitutionally and internationally viewed.

2. Comparative Constitutional Law.

   Professor WILLOUGHBY. *Two hours weekly, second half-year.*

   A discussion of the more difficult points in the systems of constitutional jurisprudence of Germany, Switzerland, Canada, and Australia.

3. Administrative Law of the United States.

   Professor WILLOUGHBY. *One hour weekly, first half-year.*

   A discussion of the constitutional law governing the exercise of federal executive powers.

4. Political Theories and Political Literature in England during the Nineteenth Century.

   Professor WILLOUGHBY. *One hour weekly, second half-year.*

5. Historical Development of the Roman Law.
Dr. MAGOFFIN. *One hour weekly, through the year.*

6. Historical Development of the English Law.
Dr. STEINER. *One hour weekly, through the year.*

Undergraduate instruction in Political Science is given in the departments of History and Economics.

PHILOSOPHY AND PSYCHOLOGY

GRADUATE COURSES

The graduate work of the department takes different directions according as the chief interest of the student lies in the field of Philosophy proper, in Experimental and Comparative Psychology, or in Education. In each great subject the work is planned to cover three years. The arrangement by years is mainly for convenience; it is not of the nature of a curriculum. The courses are offered to stimulate the student in the work of investigation. Whether or when the student shall take the degree of Doctor of Philosophy depends upon his success in the prosecution of a piece of research.

In Philosophy proper the first year offers courses in General Psychology, Social Psychology and Philosophy, Theory of Evolution, and Genetic Psychology—these topics being the necessary foundation for the more detailed work of later years. In Psychology, a training course in Experimental and Comparative Psychology is added. Students specializing in Education take courses in the different branches of Psychology, in Evolution, and in the History of Philosophy and of Education.

In the second year, more special work of research is carried on. In Philosophy, the Theory of Knowledge becomes the central topic; History of Philosophy and Ethics are given; and a variety of special topics is pre-

sented. Under Psychology, the research courses in the laboratory are central, the Theory of Knowledge is associated with it, and again a variety of special topics allows choice of subjects allied to the main problem of the particular student. With Education, Psychology, Philosophy, and Ethics are always associated.

In the third year, the seminary and laboratory courses are the centre of all the work done, the student being expected to give most of his time to the topic of his dissertation. The professors devote themselves to the direction of the student's investigation. A graduate conference meets weekly.

Professor BALDWIN:

I. Theory of Experience. Seminary course on the more logical and philosophical aspects of knowledge in its relation to experience as a whole, summarizing the theory of Genetic Logic.
Two hours a week through the year.

II. Theory of Organic and Mental Evolution.
One hour a week, first half-year.

III. Theory of Mental Development in the Individual.
One hour a week, first half-year.

IV. Social Psychology.
One hour a week, second half-year.

Professors BALDWIN and GRIFFIN:

Graduate Conference. Papers and discussions by all members of the department.
One hour a week through the year.

Professor GRIFFIN:

I. British Empirical Philosophy.
One hour a week through the year.

II. Ethical Theories from Hobbes to Price.
One hour a week through the year.

Professor BUCHNER:

I. Philosophy of Education (Seminary Course).
Two hours a week through the year.

II. Continental Philosophy since Kant.

Two hours a week through the year.

III. Educational Psychology.

One hour a week through the year.

Professor WATSON (with Dr. DUNLAP):

I. Experimental Psychology. Advanced training and research course, designed to afford students advanced training in experimental technique; research problems to be assigned early in the course.

Two hours a week through the year (laboratory hours to be arranged).

II. Comparative Psychology. Research course, covering the field of animal behavior. Research problems assigned to individuals.

Two hours a week through the year (laboratory hours to be arranged).

Dr. C. L. FRANKLIN:

I. Theory of Color Vision.

One hour a week, first half-year.

II. Symbolic Logic.

One hour a week, second half-year.

Dr. DUNLAP:

The Psychology of Sensation, with special reference to Vision and Hearing.

One hour a week, first half-year.

Dr. FURRY:

History of Aesthetics.

One hour a week through the year.

UNDERGRADUATE COURSES

1. *a.* Deductive and Inductive Logic.

Creighton's Introductory Logic is used as a text-book, with references to the works of Jevons, Mill, Bain, Keynes, and other writers.

Three hours weekly, until Christmas. Professor GRIFFIN.

b. Psychology.

Text-books liable to change from year to year are made the basis of instruction, but the subject is presented largely through informal lectures and discussions, and by means of passages in various authors assigned for reading. A series of lectures and

demonstrations on physiological and experimental psychology is included in the course. One essay on an assigned subject is required from each member of the class.

Three hours weekly, January 1 *to April* 1. Professor WATSON.

c. Ethics.

The subject is taught by lectures, recitations from a text-book—Mackenzie's Manual of Ethics being used at present,—and references to the works of the most important writers.

Three hours weekly, after April 1. Professor GRIFFIN.

2. Introduction to Experimental and Comparative Psychology.

Lectures and laboratory exercises, Tuesday and Thursday, 2 *to* 5 *p. m.* Professor WATSON.

This course, consisting of lectures, demonstrations, and laboratory exercises, is designed to serve both as a training course and as a general introduction to the problems and methods of experimental and comparative psychology.

3. Outlines of the History of Philosophy.

Rogers's Student's History of Philosophy, Weber's History of Philosophy, and other works of reference are used as the basis of lectures, discussions, and recitations.

Two hours weekly, through the year. Professor GRIFFIN.

All candidates for the degree of Bachelor of Arts are required to follow course 1 during the last year of residence.

DRAWING

1. Freehand Drawing.

The instruction aims to impart such knowledge of the principles of drawing as shall best serve to educate the eye and train the hand. Students looking forward to the study of medicine or biology will find this course of value in the illustration of lectures and laboratory work.

Three hours weekly, through the year. Mr. WHITEMAN.

2. Descriptive Geometry and Mechanical Drawing.

This course is offered to students who intend studying engineering. The work consists of lectures in the theory and of the practical application in working problems. The study of orthographic, scenographic, and isometric projections is taken up later in the course.

Three hours weekly, through the year. Mr. WHITEMAN.

Public Speaking and Debate

A course in reading and platform speaking is required of undergraduate students in their second year. For the sake of convenience in instruction, the class is divided into several small sections, to each of which is devoted one hour a week. A course in debating, which involves the study of parliamentary law, the collection and arrangement of material, and frequent practice in debate under the direction of an instructor, is assigned to students in their third year. The work of the two years is counted as a half-course. During the fourth year opportunity for a more detailed study of the art of debate and for practice in argumentative composition is open to those who desire it. Prize contests in public speaking and in debate are held annually, and one intercollegiate debate is, as a rule, undertaken each year.

Physical Training and Athletics

The authorities of the university, recognizing the importance of systematic physical exercise under suitable advice, have placed the gymnasium in charge of Dr. Ronald T. Abercrombie, and have put the work of this department on a parity with the work done in the regular courses of study.

A careful physical and medical examination is made of each undergraduate, and such exercises are prescribed as are best suited to his needs. During his first year of residence, he is required to follow the prescribed gymnasium course, which includes also his attendance on a course in hygiene. Regular class instruction is given every afternoon from five to six o'clock. The use of the gymnasium is optional in the case of graduate students, and is offered

to all members of the university upon payment of the ordinary locker fee.

"Hopkins Field," the new athletic ground at Homewood, was ready for use in October, 1907. In its construction special attention was paid to the problem of drainage, and in this respect the field is well-nigh perfect. It is enclosed by one of the best quarter-mile cinder tracks in the country, with a 220-yard "straightaway." A clubhouse provides dressing rooms, lockers, and shower baths. A stand built of ferro-concrete and accommodating one thousand spectators will be completed by the autumn of 1908.

In order to prevent ill-advised participation in out-door sports, and to guard against over-indulgence in training, the athletic teams of the university are under the control of the director of the gymnasium. No student is allowed to become a member of a team unless his physical condition is satisfactory, and no student is allowed to be a member of, or a candidate for, an athletic team, who is seriously deficient in his studies.

INFORMATION CONCERNING THE DEGREE OF MASTER OF ARTS

The degree of Master of Arts is offered to students who have obtained the baccalaureate degree from a college of good standing, have then followed courses of university study under proper guidance for at least two years, and have satisfied the requirements mentioned below.

The Board of University Studies reserves the right to decide in each case whether the preliminary training has been satisfactory, and, if any of the years of graduate work have been passed by the candidate away from this University, whether they may be considered as spent in accordance with these regulations.

At least one academic year must be passed in this University, and in every case this must be the one immediately preceding the final examinations, unless special permission to the contrary is granted by the Board of University Studies for some extraordinary reason.

The candidate for the degree must make formal application to the Board of University Studies at least one academic year before he expects to present himself for his final examinations. In this application he must state the subject which it is his intention to pursue as his principal study, and in his choice of additional subjects he must be guided by the advice of the professor in charge of his principal work.

In order to obtain the degree the candidate must satisfy two requirements:

1. He must prepare an essay upon a subject approved by the Board of University Studies. This must be completed and submitted to the Board at least four weeks before the time of the final examinations. Two referees will then be designated who shall present to the Board a written report. This essay shall be prepared for presentation to the Board in the manner prescribed for the

dissertations submitted for the degree of Doctor of Philosophy.

2. If the report on the essay is satisfactory, the candidate will then be admitted to the final written examinations.

The candidate is, however, permitted to take at the end of any academic year (or at the beginning of the next) examinations on the subjects followed during that year. In case these are passed in a satisfactory manner, he will not be examined further in them. Reports of these examinations shall be made to the Board of University Studies.

The names of the candidates found worthy of the degree will be submitted to the Board of Trustees, and with their approbation the degree will be publicly conferred.

INFORMATION CONCERNING THE DEGREE OF DOCTOR OF PHILOSOPHY

GENERAL STATEMENT

The degree of Doctor of Philosophy is offered to students who, after obtaining the baccalaureate degree from a college of good standing, have followed courses of university study under proper guidance and without serious distractions for at least three years and have satisfied the requirements mentioned below.

The Board of University Studies reserves the right to decide in each case whether the preliminary training has been satisfactory, and which, if any, years of graduate work not spent in this University are to be considered as spent in accordance with these regulations.

At least one academic year must be passed in this University, and, except in extraordinary cases, the one preceding the final examinations.

PRINCIPAL AND SUBORDINATE SUBJECTS

To become a candidate for the degree the student must select a subject on which he intends to concentrate his efforts and must place himself under the guidance of the professor of this subject. This is called his "principal" study. With the advice of the professor and subject to the approval of the Board of University Studies, the student must choose two other studies, known as "subordinate" subjects, which he must follow. These are called the "first subordinate" and the "second subordinate," and the two should represent one year's work, two-thirds of this being devoted to the former. Additional information concerning the selection of these subjects is given on pages 213-220.

ACCEPTANCE OF THE CANDIDATE

A student who wishes to be considered a candidate for the degree must make written application to the Board of

University Studies upon a form provided for this purpose, at least one academic year before he expects to present himself for his final examinations.* Before this application can be accepted, he must satisfy the University examiners that he is able to translate at sight French and German journals and monographs relating to his principal subject.

REQUIREMENTS FOR THE DEGREE

Certain examinations, as outlined below, must be passed by the candidate, in order to obtain the degree; but the distinctive requirement for this degree is the presentation of evidence that the candidate has carried to successful completion an original investigation in his principal subject upon a theme approved by his professor. The results of this investigation must be embodied in a dissertation, and submitted to the Board of University Studies.

REGULATIONS CONCERNING THE DISSERTATION

a. The dissertation must be prepared for presentation to the Board of University Studies in accordance with instructions which may be obtained from the Registrar, and to every such dissertation must be appended a brief biographical sketch of the author. It must be submitted to the Board at least four weeks before the examinations in the principal subject.

b. The Board shall designate two or more referees, who shall make a written report on the dissertation.

REGULATIONS CONCERNING THE EXAMINATIONS†

a. The candidate shall be subjected to written examinations in his principal subject, and, whenever prac-

*A student who has been admitted as a candidate for the degree of Doctor of Philosophy will be considered to have satisfied the requirements for admission to courses leading to the degree of Master of Arts.

†If a student who has absolved the examinations required for the degree of Master of Arts in this University becomes a candidate for the degree of Doctor of Philosophy, he may, at the discretion of the professors, be excused from any further written examinations in the particular courses in which he has already passed.

ticable, in both his subordinate subjects. The results of the examinations shall be reported in writing to the Board of University Studies; and, if these reports and the report on the dissertation are satisfactory, the candidate shall be admitted to an oral examination in his principal and first subordinate subjects before the Board, or a section of it.

b. The written examinations in the subordinate subjects may be taken at any time during the candidate's residence at the University, subject to the judgment of the examiners.

c. In the written examinations no session shall exceed five hours. In the oral examinations before the Board, the time allotted shall be one hour; and three-quarters of this shall be devoted to the principal subject.

OTHER REGULATIONS

Before the candidate is admitted to the oral examination he must signify his intention, in the event of his receiving the degree, to print his dissertation in full or in part, and to satisfy the requirements specified below.

If the dissertation is not printed in full, an abstract must be prepared or a portion selected with the approval of the professor, which shall contain when printed not less than twenty-four octavo pages.

One hundred and fifty printed copies of the dissertation must be presented to the University within one year of the time when the degree is conferred. These must have the prescribed title page and must contain the biographical sketch.

The candidate is advised to have these printed copies ready for presentation before the date for the conferring of the degree; otherwise a deposit of $50.00 with the Treasurer of the University must be made. This deposit is returned when the printed copies are presented to the University. If these have not been received within the year specified, the Board of University Studies may declare the deposit forfeited and may apply the amount in printing the dissertation or a part of it.

CONFERRING OF THE DEGREE

The names of the candidates found worthy of the degree will be submitted to the Board of Trustees, and with their approbation the degree will be publicly conferred.

Information Concerning the Choice of Subordinate Subjects

The following suggestions are not to be understood as limiting the attention of the student to the subjects directly connected with the requirements for the degree. In order to secure the full benefit of university training it is often desirable to broaden the outlook through acquaintance with other subjects—especially those that are conterminous with the chosen field of study. It is also important to learn to appreciate the methods and to come under the influence of other personalities than those that dominate the student's special line of work.

In the choice of subordinate subjects to be associated with a principal one, considerable freedom is permitted by the Board of University Studies. Certain combinations have been recognized officially in previous years, and others are admissible.

In the study of any principal subject, the knowledge of a limited number of other subjects is, as a rule, essential. If, on entrance, the student is not sufficiently proficient in these, he must follow courses in this university which will give him the requisite knowledge. These courses need not, however, of necessity be offered as first and second subordinates.

In order to guide the student in his selection of subordinate studies, a number of statements are given below in tabular form, which apply to the various departments

of study in this university. These statements furnish:—

I. In case the student selects a given subject as his principal one:

a. A list of the other subjects an adequate knowledge of which is considered essential.

b. A list of the subjects which, in the past, have been accepted as first or second subordinates in connection with the principal subject.

II. In case the student selects a given subject as his subordinate one:

A list of the courses in that department, which are ordinarily considered sufficient.

Mathematics

I. *a.* While no other subject can be said to be essential to the study of mathematics, it is very desirable that one taking up graduate work should have adequate knowledge of natural sciences, particularly of physics.

b. Physics, Geological Physics, Electricity, Astronomy, History of Philosophy, Psychology.

II. Two or more of the following: Elementary Differential Equations, Theory of Functions, Vector Analysis, Dynamics.

Physics

I. *a.* Chemistry and Mathematics.

b. Chemistry, Mathematics, Astronomy, Applied Electricity, Geological Physics.

II. Physics 1, 2 or 3, with corresponding laboratory courses, Advanced General Physics, Applied Electricity.

Astronomy

II. Celestial Mechanics; Cosmical Physics, with observatory work.

Chemistry

I. *a.* Mathematics (through the Calculus), General Physics, Mineralogy, Physical Chemistry.

b. Mathematics, Physics, Mineralogy, Geology, Physical Chemistry, Biology 1.

II. Chemistry 2 or 3; Physical Chemistry, with corresponding laboratory courses.

Geology

I. *a.* Students who take Geology as their principal subject, are allowed to select courses suitable as a training for general geology and teaching, or those which lead to specialization in Paleontology, Stratigraphic Geology, Petrography, Mineralogy, or Geological Physics. All students are expected to be familiar with the matter given in the elementary or undergraduate courses.

b. (1) Biology, (2) Chemistry, (3) Physics, (4) Petrography, (5) Mineralogy, (6) Paleontology.

Nos. 1-3 may be taken as second subordinates by all students in Geology.

Nos. 4-5 may be taken as a first subordinate by students specializing in Paleontology or Stratigraphic Geology, who are advised to take Biology or Physics as a second subordinate.

No. 6 may be taken as a first subordinate by students specializing in Petrography or Mineralogy, who are advised to take chemistry or physics as a second subordinate.

For students in Physics: Geological Physics, Exploratory Surveying, Crystallography—Optical Mineralogy (Geology 1 in part, Advanced Mineralogy in part).

For students in Chemistry: Geology 3 and Economic Geology, Geology 1, Advanced Mineralogy.

For students in Biology: Geology 1 or 2, Paleontology and Paleobotany, Historical Geology.

Zoology

I. *a.* Two or more of the following: Chemistry, Physics, Botany, Geology, Physiology, Psychology.

b. Botany, Physiology, Geology, Anatomy, Pathology.

II. Biology 1, Biology 2 (Part 1), Biology 3 (Part 1), a graduate course.

Botany

I. *a.* Physics, Chemistry, General Biology, Zoology.

b. Zoology, Physical or Organic Chemistry, Geology, Physiology, Pathology.

II. An undergraduate course, with laboratory work; one of the graduate courses.

Physiology

I. *a.* Physics, Chemistry, and Biology.

b. Zoology, Botany, Physics, Chemistry, Physiological Chemistry.

II. Course 4, as on page 169.

Greek

I. *a.* Latin and English (language and literature).

b. Latin, Comparative Grammar, Sanskrit, English, Semitic, Classical Archæology, Philosophy.

II. Prescribed courses of reading in the chief ranges of Classical Greek literature of greater or less extent for first or second subordinate.

Two courses of practical exercises for the first subordinate, one course for the second.

Attendance on the Seminary for two years for the first subordinate, one year for the second.

Latin

I. *a.* Greek and English (language and literature).

b. Greek, Sanskrit and Comparative Philology, Classical Archæology (Greek and Roman), English, a Romance language, a Semitic language, History.

II. Attendance on the Seminary and lectures during two years for the first subordinate subject, one year for the second.

Prescribed courses of reading in Roman literature for first or second subordinate.

Those who make Latin their principal subject must take Greek as one of their subordinate subjects. They must also follow the regular courses in Latin Epigraphy and Palæography, as well as in the Comparative Grammar of the Indo-European languages.

Classical Archaeology

I. *a.* Latin and Greek.

b. Latin, Greek, History, Sanskrit and Comparative Philology, Italian or another Romance language.

II. Five hours weekly for two years for the first subordinate; five hours weekly for one year for the second. Prescribed courses of reading.

Those who make Classical Archæology a principal subject are urged to plan for at least a year of residence in Europe, preferably in the American School of Classical Studies at Athens or in the American School of Classical Studies in Rome. For advanced students of Roman Archæology, a reading knowledge of Italian is indispensable.

Sanskrit and Comparative Philology

I. *a.* Classical or Modern Philology, History, Philosophy.

b. Greek, Latin, Germanic Philology, English, Philosophy.

II. For the first subordinate subject, a course in Sanskrit, two lectures a week during two years and attendance on the Vedic Seminary for a half-year (one hour a week); for the second subordinate subject, a course in Sanskrit, two hours a week during a year and a half.

In no case has a student whose principal subject was Sanskrit and Comparative Philology restricted himself to two subordinate subjects. As a rule Avestan, Lithuanian, Gothic, English, and other subjects figured among his courses, in addition to the principal and the two subordinate subjects.

Oriental Seminary

I. *a.* For Hebrew as the principal subject—German, Greek, Latin, Arabic, History of the Ancient East, Biblical Antiquities, Geography of Western Asia.

b. Assyrian, Arabic, Syriac, or Ethiopic, as the first or the second subordinate subject; Egyptology, History of the Ancient East, History of Philosophy, Greek, Sanskrit, Philippine languages, as the second subordinate.

II. For Hebrew as first subordinate—Comparative Hebrew Grammar, Hebrew Prose Composition, Old Testament Seminary.

For Hebrew as second subordinate—the second year's course in Hebrew and private reading of at least fifty chapters of the Hebrew Bible.

English

I. *a.* Gothic, Old High German, Middle High German, Old Norse, Old French, German and French Literature.

b. German, French, Italian, Spanish, Greek, Latin, Sanskrit, History, Philosophy.

II. Courses in the history of the Language and the Literature and some special work in selected periods or subjects.

German

I. *a.* English, French, Latin.

b. English, French, Latin, Sanskrit, Spanish, Greek, History of Philosophy, History.

II. German as second subordinate—Courses 1, 2, 5, Seminary in Middle High German, one year's membership in the Germanic Society (or a similar amount of work in German Literature).

German as first subordinate—a combination of the two alternatives indicated above; two years' membership in the Germanic Society.

Romance Languages

I. *a.* Latin; a reading knowledge of Spanish, or of Italian, if either of these is chosen as the principal subject; an elementary acquaintance with French, Spanish, or Italian history, according to selection of subject.

b. Sanskrit, Greek, Latin, German, English, History, Philosophy.

II. For the first subordinate, Literature (old and modern), Language (old and modern), Physiological Phonetics, Popular Latin, Private Reading.

For the second subordinate, Literature (modern), Language (modern), Private Reading.

History

I. *a.* Political Economy, Political Science, Latin, French, German.

b. Political Economy, Political Science, Philosophy, English, French.

II. For the second subordinate, lectures, with collateral research, two hours a week for two years, either in European, English, or American history; for first subordinate, four hours a week for two years, with choice in the same subjects.

Political Economy

I. *a.* History and Political Science.

b. History, Political Science, Philosophy, English, Mathematics, Biology.

II. For the first subordinate, two graduate courses for two years, with prescribed reading; for the second subordinate, two graduate courses for one year, with prescribed reading.

Political Science

I. *a.* History, Political Economy, and the Principles of Private Law.

b. History, Political Economy, Philosophy, the Principles of Private Law.

II. Two hours' lecture work, with collateral reading, for two years, for the second subordinate; four hours' work for two years for the first subordinate.

Philosophy.

The choice of subordinate subjects is made in consultation with the professors. The different branches of the department—Philosophy, Scientific Psychology, and Education—do not lend themselves to a single scheme of subordinate subjects, since wide variations arise in individual cases.

COLLEGIATE INSTRUCTION

The Johns Hopkins University makes ample provision for collegiate instruction. The courses offered to undergraduates are maintained with no less care and thoroughness than those intended for advanced students; many of the most experienced members of the academic staff cooperate in the conduct of them. No small part of the influence and usefulness of the university is in connection with the collegiate classes, in which, since 1876, nearly two thousand students have been enrolled.

Certain features of organization and administration have contributed to the effectiveness of the undergraduate work. The scrupulous observance of the distinction between the disciplinary methods appropriate to college teaching and the freer methods of advanced instruction; the "group" arrangement of studies, combining a reasonable liberty of choice with a sufficient exercise of authority; the facilities afforded young men of superior capacity for carrying their studies beyond the requirements of graduation; the influence upon younger pupils of the presence of a large body of graduate scholars conducting investigations in all the great departments of learning,—these conditions have proved favorable to the development of earnestness and scholarly devotion.

Arrangement of Courses

Upon admission to the university, an undergraduate student is assigned to an Adviser (see page 235), and under his guidance is expected to select a scheme of studies composed of courses more or less connected. In order to help the student in this selection five groups of studies are organized, details concerning which are given below. Having once made a choice, a student may not change his group except with the consent of his Adviser and with the approval of the Executive Committee of the Board of Collegiate Studies.

In the formation of the various groups, the effort has been made to combine such studies as shall give the student the essential elements of a liberal education, and, at the same time, special training in certain co-ordinate subjects. By this method the student is not bound to a particular routine of work for which he may feel no especial inclination, nor yet is it possible for him to waste his time and attention by the injudicious selection of wholly unrelated subjects. In all the groups provision is made for certain studies prescribed for all students who are candidates for a degree, and for certain other studies peculiar to the individual group.

By reference to the detailed statement of each group given on pages 225-229, it will be seen that the courses of the first two years are prescribed, but that in each of the last two years there are but one or two prescribed studies. In each of these last two years, therefore, a student may, subject to the provisions already noted, elect four courses. With the approval of his Adviser he may select any courses which he is prepared to enter.

The following is a general statement of the characteristic features of each group:

Group I. Ancient Languages

In Group I the emphasis is laid upon Latin and Greek, each of which is studied for at least two years. In the last two years the courses are so arranged that the student may continue the study of these languages, or, if he desires, may devote himself to the study of History, Modern Languages, or Science.

Group II. Modern Languages

In Group II the study of Latin is continued for two years, but the literary training of the student is based chiefly on the study of English, French, and German, with Spanish and Italian if desired. In the later years the courses are arranged so as to permit the student to continue the study of Modern Languages, or to give his attention to History or Science.

Group III. History and Political Economy

In Group III the study of Latin is continued as in Groups I and II, but the student devotes the greater part of his time to History and Political Economy. He may continue these studies during the last two years, or he may take advanced courses in Latin, Modern Languages, or Science.

Group IV. Mathematics and Physics

In Group IV the training of the student is based upon the study of the exact sciences rather than upon language and history. Mathematics and Physics are studied for at least two years, and the student may also follow courses in Chemistry, Biology, or Geology. In the last two years, the student may continue the former studies, or he may take advanced courses in Modern Languages and History.

Group V. Chemistry, Biology, and Geology

In Group V the natural sciences form the basis of instruction, being supplemented by the prescribed courses in Modern Languages, History or Political Economy, and Mathematics. In the later years, the student may continue the study of Science, or he may devote his attention to Modern Languages or History.

Students who intend to enter the medical department of this university, should choose Group V, and should arrange to pursue the following courses: English, French, and German, each for two years; Mathematics, for two years; Chemistry, for three years; Biology and Physics, each for one year. Other prescribed courses are History or Economics for one year and Philosophy for one year. These students are advised by the Medical Faculty to arrange their work so that their last year shall include courses in Chemistry and Biology, and, if possible, a course in the Chemistry of the Carbon Compounds.

These courses may be arranged as follows:—First year: Chemistry 1, French 1 or German 1, English Composition 1, Mathematics 1, Physical Training. Second year: English Literature 1, German 1 or French 1, Mathematics 2, Chemistry 2, Vocal Training, and a half-course to be elected. Third year: Physics 1, with laboratory, General History (History 2) or Political Economy, French 2 or German 2, Biology 1, Forensics. Fourth year: Philosophy, German 2 or French 2, Chemistry 3, Biology 2.

It should be noted that, in order to enter the medical department, the degree of Bachelor of Arts is required, and further that the conditions for this degree, as stated on pages 233-234, prescribe at least three courses in one definite subject.

Group I. Ancient Languages

First Year

PRESCRIBED SUBJECTS

LATIN 1. *Four hours weekly.*
Livy; Vergil.
Catullus; Juvenal.
Prose Composition.
Private Reading: Cæsar, *Bell. Civ.;* Vergil; Cicero.

Elective Courses

A student may take as an elective any course that he is prepared to enter. Numerous courses, other than those described under the separate groups, will be given as a rule each year; and they, as well as those scheduled in the groups, may be chosen as elective courses, under the conditions specified on page 222. In 1908-09 these will be in the following subjects:

Latin.
Greek.
Greek and Roman Life.
Classical Archæology.
Comparative Philology.
Hebrew.
English and Anglo-Saxon.
French.
German.
Spanish.
Italian.
History.
Mathematics.

Requisites for the Degree of Bachelor of Arts

As evidence that the collegiate course has been successfully completed, the degree of Bachelor of Arts is conferred at its close. The degree signifies, in the case of every recipient, such instruction in ancient and modern languages, in mathematics, in the physical and natural sciences, in literature, philosophy, and history, as is believed to be essential to a liberal education.

Twenty courses are required for graduation, and no combination of studies is accepted which does not include three courses in one subject and two courses in another subject.

All candidates for a degree take the following prescribed courses, which are for one year unless otherwise noted:

Rhetoric.
English Literature.
French.
German.
History or (in Groups IV and V) Political Economy.
Physics.
Mathematics—
  In Groups I, II, and III, one-half year.
  In Groups IV and V, one year.
Philosophy.
Vocal Training.
Forensics.
Physical Exercises.
A Laboratory Course—
  In Groups I, II, and III, Natural History (one-half year).
  In Groups IV and V, Chemistry and Physics.

The remaining courses necessary to complete the number required are chosen, subject to the approval of the Adviser, in accordance with the schemes outlined under the several groups.

A student may be admitted to advanced standing, in accordance with the regulations given on page 241, but in all cases the candidate must pursue the last year of his undergraduate course in this institution.

In general, four years of residence are necessary for the completion of the courses required for a degree. A capable student may, however, complete this work in three years. Such a student may (1) anticipate certain of the courses by special examination at entrance;* (2) present himself, at the beginning of an academic year, for examination in a single course, provided the Committee on Admission and Advanced Standing, being satisfied that the student can obtain competent instruction, has authorized him, in advance, to prepare this course during the summer vacation;* (3) take, under certain conditions, in any year of residence except the first, a greater number of courses than is called for in the program; (4) offer nineteen courses for graduation instead of twenty, in accordance with the following provision:

In case a student has an average of not less than 9 for the work of his third year, and has not received a mark as low as 7 for any of his courses since entrance to the university, he need offer only nineteen courses for graduation.

A student whose average in his studies for each of his last two years has not been less than 9, and who has not received a mark less than 7.5 in any of his courses during his last three years, shall receive his degree WITH HONOR.

Special students who have been in residence at least two years and who have completed their work in a satisfactory manner, shall receive a certificate stating the facts, and signed by the President of the University.

---

*Forms of application for these privileges are provided and must be obtained from the Registrar.

Committees and Advisers

Standing Committees. The Board of Collegiate Studies appoints four standing committees:

1. The Executive Committee, which has charge of such matters pertaining to discipline and general administration as may be delegated to it by the Board of Collegiate Studies.
2. The Committee on Admission and Advanced Standing.
3. The Committee on Scholarships and Honors.
4. The Committee on Assignment of Advisers.

The Dean of the College Faculty is *ex officio* a member of each of these.

Advisers. When an undergraduate student is admitted to the university, he is assigned to an Adviser by the standing committee charged with this duty, and he will, under ordinary circumstances, remain under the direction of the same Adviser during his whole course. The approval of the Adviser is necessary before the student can enter upon any course of study; no instructor will receive into a class a student who does not bring with him (in a book provided for that purpose) assurance that his Adviser approves his pursuing the study at that time; and no student is allowed, without the consent of his Adviser, to discontinue any work. Each Adviser endeavors to establish relations of friendliness and confidence with the students assigned to his care; he not only gives counsel in regard to the selection of studies, but promotes the welfare of his students in every practicable way.

Requirements for Admission

Those who wish to pursue undergraduate courses in the university should apply to the registrar for a blank form of "Application for Admission," which must be filled up and returned to the registrar one week at least before the time set for the entrance examinations. These examinations are held at the university in June and September of each year.

To accommodate those who wish to take their examinations elsewhere, the university will accept certificates from the College Entrance Examination Board for subjects passed in accordance with its regulations. (See page 242.)

Applicants for Matriculation

Those who wish to become candidates for the degree of Bachelor of Arts must present the following certified statements:

1. A statement of the successful completion of courses in Arithmetic, Political Geography, Freehand Drawing, and either Physical Geography or a science such as Botany, Chemistry, Physics. The course in science must include laboratory work on the part of the student. Those who have not had satisfactory instruction in Drawing will be required to pursue the course offered by the university.

2. A statement in regard to the several languages required for matriculation. This should give the following information: (*a*) the authors read, (*b*) the extent of reading in each, (*c*) the length of time devoted to each subject and the number of exercises weekly.

Blank spaces for these certified statements will be found in the form of "Application for Admission" referred to above, and these should be filled up and signed by the

head of the school or by the teacher, under whom the applicant has prepared for college.

If these statements are satisfactory, the applicant will be admitted to the matriculation examinations; if they are unsatisfactory, the Committee on Admission will prescribe such conditions as may be necessary.

A candidate admitted to the examination is expected to pass in the following subjects:

English.	Latin.	Greek or French and German.
History.	Mathematics.	

Details of the requirements in these subjects will be found below.

Division of the Matriculation Examinations

The applicant may pass a part of the examinations one year before his admission to the university and receive credit, under the following conditions:

In his application *he must distinctly declare his intention to divide the examinations.* The subjects passed will not count towards matriculation unless the applicant offers the remaining subjects within the ensuing year. The first part of the divided examination will be confined to the following subjects, of which the applicant will be expected to pass in the first three at least:

English (*a*).	French or German.
Algebra (*a*).	History of the United States or of Greece.
Plane Geometry.	History of England or of Rome.
Greek (*a*).	
Latin (*a*).	

Requirements for Matriculation

1. Mathematics.—Algebra; Plane Geometry; Plane Trigonometry.

The requirements in Algebra are as follows:

(*a*). To Quadratics, including the four fundamental rules the use of parentheses, factoring, highest common factor, lowest common multiple, complex fractions, equations of the first degree in one or more unknown quantities, and problems leading to such equations, inequalities, radicals, and the use of fractional and negative exponents.

(*b*). Quadratics and beyond, including quadratic equations in one and two unknown quantities, and problems leading to such equations, the theory of quadratic equations in one unknown quantity, ratio and proportion, the progressions, the elementary treatment of permutations and combinations, the binomial theorem for positive integral exponents, and the use of logarithms.

The subjects required in Plane Geometry and in Trigonometry are those treated in the ordinary text-books.

2. English.—The examination consists of two parts:

a. Reading. The candidate will be required to write a paragraph or two on each of several topics chosen by him from a considerable number—perhaps ten or fifteen—set before him in the examination paper. These topics are selected with reference to certain books, a list of which is given below. This part of the examination is designed, primarily, to test the candidate's power of clear and accurate expression, and will call for only a general knowledge of the substance of the books. As additional evidence of preparation, the candidate may present an exercise book, properly certified by his instructor, containing compositions or other written work.

The books prescribed for this part of the examination are:

In 1908: Shakespeare's *The Merchant of Venice* and *Macbeth; The Sir Roger de Coverley Papers* in *The Spectator;* Irving's *Life of Goldsmith;* Coleridge's *The Ancient Mariner;* Scott's *The Lady of the Lake* and *Ivanhoe;* Tennyson's *Gareth and Lynette, Lancelot and Elaine,* and *The Passing of Arthur;* Lowell's *The Vision of Sir Launfal;* George Eliot's *Silas Marner.*

In 1909 and 1910: Group I (*two* to be selected).

Shakespeare's *As You Like It, Henry V, Julius Caesar, The Merchant of Venice, Twelfth Night.*

Group II (*one* to be selected).

Bacon's *Essays;* Bunyan's *The Pilgrim's Progress, Part I; The Sir Roger de Coverley Papers* in *The Spectator;* Franklin's *Autobiography.*

Group III (*one* to be selected).

Chaucer's *Prologue;* Spenser's *Faerie Queene* (selections); Pope's *The Rape of the Lock;* Goldsmith's *The Deserted Village;* Palgrave's *Golden Treasury* (First Series), Books II and III, with especial attention to Dryden, Collins, Gray, Cowper, and Burns.

Group IV (*two* to be selected).

Goldsmith's *The Vicar of Wakefield;* Scott's *Ivanhoe;* Scott's *Quentin Durward;* Hawthorne's *The House of the Seven Gables;* Thackeray's *Henry Esmond;* Mrs. Gaskell's *Cranford;* Dickens' *A Tale of Two Cities;* George Eliot's *Silas Marner;* Blackmore's *Lorna Doone.*

Group V (*two* to be selected).

Irving's *Sketch Book;* Lamb's *Essays of Elia;* De Quincey's *Joan of Arc* and *The English Mail Coach;* Carlyle's *Heroes and Hero Worship;* Emerson's *Essays* (selected); Ruskin's *Sesame and Lilies.*

Group VI (*two* to be selected).

Coleridge's *The Ancient Mariner;* Scott's *The Lady of the Lake;* Byron's *Mazeppa* and *The Prisoner of Chillon;* Palgrave's *Golden Treasury* (First Series), Book IV, with special attention to Wordsworth, Keats, and Shelley; Macaulay's *Lays of Ancient Rome;* Poe's *Poems;* Lowell's *The*

Vision of Sir Launfal; Arnold's *Sohrab and Rustum;* Longfellow's *The Courtship of Miles Standish;* Tennyson's *Gareth and Lynette, Lancelot and Elaine, and The Passing of Arthur;* Browning's *Cavalier Tunes, The Lost Leader, How They Brought the Good News from Ghent to Aix, Evelyn Hope, Home Thoughts from Abroad, Home Thoughts from the Sea, Incident of the French Camp, The Boy and the Angel, One Word More, Hervé Riel, Pheidippidus.*

b. Study and Practice. This part of the examination presupposes the careful study of each of the works named below. The examination will be upon subject-matter, form and structure, and will also test the candidate's ability to express his knowledge with clearness and accuracy.

The books set for this part of the examination are:

In 1908: Shakespeare's *Julius Caesar;* Milton's *L'Allegro, Il Penseroso, Comus,* and *Lycidas;* Burke's *Speech on Conciliation with America;* Macaulay's *Essay on Addison* and *Life of Johnson.*

In 1909 and 1910: Shakespeare's *Macbeth;* Milton's *L'Allegro, Il Penseroso, Comus,* and *Lycidas;* Burke's *Speech on Conciliation with America,* or Washington's *Farewell Address* and Webster's *First Bunker Hill Oration;* Macaulay's *Life of Johnson,* or Carlyle's *Essay on Burns.*

In connection with the reading and study of the required books, parallel or subsidiary reading should be encouraged, and a considerable amount of English poetry should be memorized. The essentials of English grammar should not be neglected in preparatory study.

No candidate will be accepted in English whose work is notably defective in point of spelling, punctuation, idiom or division into paragraphs.

Although candidates will be permitted to take the entire examination of the time of entrance, it is strongly recommended that Part *a* be taken as a preliminary examination and Part *b* as a final examination. Candidates will thus have an opportunity to make up deficiencies which may be discovered at the preliminary examination, and to enter the university without a condition in English.

3 HISTORY.—The outlines of the History of England and the United States, or of the History of Greece and Rome, and the outlines of the geography of these countries.

4. LATIN.—A systematic course of instruction extending over four school years at least is presupposed. The applicant should have read the following texts:

Nepos and Cæsar, at least 100 pages.*
Cicero's Orations, at least 100 pages.*
Ovid and Vergil, at least 6000 verses.

The examination includes three elements:

(*a*) Latin Grammar (both forms and syntax), based on Cæsar, *Gallic War,* Book I, and Cicero, *Orations against Catiline,* I, II, and III.

(*b*) Translation into English of Latin prose and verse, together with questions suggested by the text, including questions on prosody. A part of the translation will be at sight, and, in all translations, simple, idiomatic English will be required.

(*c*) Translation into Latin of a passage of easy connected English prose.

In case the examination is divided, as provided for on page 237, (*a*) should be offered at the preliminary examination.

*The standard page is that of the Teubner texts.

5. GREEK.—A systematic course of instruction extending over three school years at least is presupposed. The applicant should have read the following texts:

Xenophon, *Anabasis*, at least four books.
Homer, *Iliad*, at least four books, or *Odyssey*, at least six books.

The examination includes three elements:

(*a*) Greek Grammar (both forms and syntax), based largely on Xenophon, *Anabasis*, Books I and II.

(*b*) Translation into English of Attic prose and of Homer, together with questions suggested by the text, including questions on Homeric life and the prosody of the Homeric poems. A part of the translation will be at sight, and in all translations simple, idiomatic English will be required.

(*c*) Translation into Greek (with accents) of a passage of easy connected English prose.

In case the examination is divided as provided for on page 237, (*a*) should be offered at the preliminary examination.

Applicants not offering Greek must meet the following requirements in French and German:—

6. FRENCH.—The requirement in French presupposes a systematic course extending over at least two school years, at the end of which time the student should be able to pronounce French accurately, to read at sight easy French prose, to put into French simple English sentences taken from the language of every-day life or based upon a portion of the French text read, and to answer questions on the rudiments of French grammar. The examination, which may not be divided, comprises.

(*a*) Questions on the elements of French grammar, including the inflection of adjectives, participles, and pronouns; the use of personal pronouns, common adverbs, prepositions, and conjunctions; the order of words in the sentence; and the elementary rules of syntax.

(*b*) The translation into French of short sentences illustrative of the rules of grammar and of a short paragraph based on a French text given. In place of the translation of this paragraph the candidate may substitute an original exercise in French on a subject set by the examiner.

(*c*) The translation, at sight, of easy French prose.

(*d*) An oral exercise in pronunciation.

The candidate should have read from 400 to 500 pages of French prose taken from a standard reader and from the texts edited for elementary use, as listed by the leading publishers; especially those of the works of About, Bruno, Dumas, Erckmann-Chatrian, Halévy, Laboulaye, Labiche and Martin, Malot, Sand, and Verne. Grammars recommended are Fraser and Squair's Part I, Thieme and Effinger's, Longman's, and Perry and Reums' French Book.

7. GERMAN.—The requirements in German presupposes at least two years of school work under approved methods, with four recitations weekly, and the reading of a minimum of 300 pages of easy dialogue and narrative prose.

Candidates are expected to give particular attention to pronunciation, to the acquisition of an elementary German vocabulary, and to an accurate knowledge of the rudiments of German grammar, in quantity corresponding to Vos's *Essentials of German*.

The examination, which may not be divided, comprises:

(*a*) Translation at sight of passages of simple dialogue and narrative prose. Help will be given on unusual words and constructions.

(*b*) Questions on grammatical forms and syntax. These will, as a rule, be based upon the passages assigned for translation.

(*c*) Translation into German of easy English from the language of every-day life. In addition, a brief rendering of English into German, based on the passages described under (*a*), may be required.

Selections may be made from such texts as the following:

Baumbach, *Sommermärchen*, *Der Schwiegersohn*. Benedix, *Eigensinn*, *Der Prozess*. Gerstäcker, *Germelshausen*, *Irrfahrten*. Hauff, *Das kalte Herz*. Heyse, *L'Arrabbiata*. Riehl, *Burg Neideck*. Saar, *Die Steinklopfer*. Seidel, *Leberecht Hühnchen*. Stifter, *Das Haidedorf*. Storm, *Immensee*, *In St. Jürgen*. Sudermann, *Teja*. Wildenbruch, *Das edle Blut*, *Der Letzte*.

Applicants for Advanced Standing

A student may be admitted to advanced standing at entrance by passing the necessary examinations. Forms of application for this privilege and all necessary information may be obtained from the Registrar. Under ordinary circumstances a student will not be allowed to anticipate at entrance more than two courses.

A student entering from another college of good standing may be credited with work done there, provided he submits certificates satisfactory to the Committee on Admission and Advanced Standing.

Special Students

The university is ready to receive as special students those who are qualified by age, character, attainments, and habits of study, to attend its classes and lectures with profit to themselves and the institution. Such persons may be admitted, without matriculation, to a limited number of undergraduate courses; but the privilege once accorded will be forfeited if the student is found unworthy of it.

The requirements for admission as a special student are that the applicant shall pass such examinations, and shall present such other evidence of fitness to pursue the desired courses, as may in each case be required by the Committee on Admission. Unless excused for some definite reason, the applicant will be required to satisfy the matriculation requirements in English, in French or German, and in either Latin or Mathematics. In the past, many excellent students have been thus enrolled, among whom not a few have subsequently changed their plans, passed the matriculation examinations, and at length received the degree of Bachelor of Arts.

College Entrance Examination Board

The College Entrance Examination Board holds examinations at numerous places in the country about the third week of June in each year, information in regard to which may be obtained by addressing The College Entrance Examination Board, Post Office Sub-Station 84, New York.

These examinations, if passed with a mark of not less than 60%, will be accepted for admission, in accordance with the following scheme of equivalents.

II. FACULTY OF MEDICINE

Terms of Admission

The courses in medicine given in this university are planned for the professional education of those students who have been especially fitted to receive instruction by a course of preliminary training in the liberal arts, and especially in those branches of science, like physics, chemistry, and biology, which underlie the medical sciences. Men and women are admitted upon the same terms.

The following classes of students are received as candidates for the degree of Doctor of Medicine:

1. Those who have completed the chemical-biological course in this university (Group V) leading to the degree of Bachelor of Arts.

2. Graduates of approved colleges or scientific schools who can furnish evidence: (*a*) That they have acquaintance with Latin and a reading knowledge of French and German; (*b*) That they have such knowledge of physics, chemistry, and biology as may be obtained by a year's course in these subjects when accompanied by laboratory work.

In biology the candidate, in addition to lectures and recitations, should have followed for at least a year a laboratory course of six or more hours a week in the structure, life-history, and vital activities of selected types of animal and vegetable life. Courses in botany or zoology will be accepted, provided the laboratory work has been adequate. It is desirable also that candidates should have taken a laboratory course in embryology.

The candidate should have followed a course in general chemistry for at least a year. This course should include laboratory work, about five hours a week through the year, and lectures and class-room work covering the outlines of inorganic chemistry and the elements of organic chemistry. A good knowledge of the subject as presented in Remsen's "Introduction to the Study of Chemistry" may be regarded as the minimum requirement. A fuller knowledge of chemistry is desirable.

In physics, the candidate should have followed a collegiate course for at least one year. This should include four hours a week of class-room work and at least one afternoon a week of

quantitative work in the laboratory. Special attention should be given to theoretical mechanics and to the mechanical and electrical experiments.

In Latin the candidate should have studied Latin grammar and should possess at least such knowledge of the language as may be acquired by reading four books of Cæsar or their equivalent.

3. Those who give evidence by examination that they possess the general education implied by a degree in arts or in science from an approved college or scientific school, and the knowledge of French, German, Latin, physics, chemistry, and biology above indicated.

Applicants for admission will receive blanks to be filled out relating to their previous courses of study. They are required to furnish certificates from officers of the colleges or scientific schools in which they have studied, as to the courses pursued in physics, chemistry, and biology. If the certificates are satisfactory, no examination in these subjects will be required from those who possess a degree in arts or in science from an approved college or scientific school.

Hearers and special workers, not candidates for a degree, will be received at the discretion of the Faculty.

ADMISSION TO ADVANCED STANDING

Applicants for admission to advanced standing must furnish evidence (1) that the foregoing terms of admission as regards preliminary training have been fulfilled, (2) that courses equivalent in kind and amount to those given here preceding that year of the course for admission to which application is made, have been satisfactorily completed, and, (3) must pass examinations, at the beginning of the session in October, in all the subjects that have been already pursued by the class to which admission is sought. Certificates of standing elsewhere cannot be accepted in place of these examinations.

General Plan of Instruction

The course of instruction is planned for those who have received a liberal education and the training in physics, chemistry, and general biology which has been specified. The required period of study for the degree of Doctor of Medicine is four years. The academic year begins on the first of October and ends about the middle of June. There are short recesses at Christmas and Easter.

The first two years of the course are devoted mainly to the fundamental medical sciences, a large part of the time being spent in practical work in the laboratories. In the last two years, medicine, surgery, obstetrics, and the various specialties are studied in the clinical laboratories, the dispensary, and the wards of the hospital.

The principal studies of the first year are anatomy, including normal histology and embryology, physiology, and physiological chemistry. The study of anatomy and physiology is continued in the second year. During the second year general pathology, pathological anatomy, and pharmacology are studied. A practical course in bacteriology, with the chief emphasis upon its hygienic and pathological bearings, is given during three months of this year.

Upon the basis of thorough training in the medical sciences, pursued during the first two years of the course, the student should be well fitted to undertake the study of practical medicine and surgery.

During the third year the general principles of medicine, surgery, obstetrics, and gynecology are studied, and clinical instruction is given in these subjects and in nervous diseases. The study of certain special branches of medicine is also begun. Leading features of the work of this year are the courses in the clinical laboratories and practical work in the dispensary.

During the fourth year the practical study of medicine and surgery is continued, and instruction is given in the various special branches of medicine and surgery, viz.:

dermatology, genito-urinary diseases, orthopedic surgery, laryngology and rhinology, ophthalmology and otology, pediatrics, and psychiatry. In this year the students serve as clinical clerks and surgical dressers in the wards of the hospital and are in daily attendance at special classes in the dispensary. They also have an opportunity to take various elective courses which are described specifically in the catalogue of the medical department. For the ward and dispensary work the class is divided into small groups.

Instruction in hygiene, medical zoology, forensic medicine, and medical history is provided during the course.

Work in the dissecting room, in the laboratory, and at the bedside, demonstrations, clinics, lectures, and recitations are the main features of the methods of instruction. Simple didactic lectures occupy a subsidiary position, as compared with instruction by recitations and demonstrations and especially by practical work in the various laboratories, in the hospital wards, and in the dispensary. In consequence of the high standard of admission, the classes are not likely to be excessively large, and abundant opportunity is therefore afforded for practical work for each student and for personal contact between teacher and student.

Courses for Graduates in Medicine

Courses of instruction for graduates in medicine are given throughout the year. These courses are in Anatomy, Histology and Organology, Pathology, Bacteriology, Pharmacology, and Toxicology, Physiology, Neurology, Neurological Technique, Embryology, Physiological Chemistry, Clinical Microscopy, Medicine, Pediatrics, Obstetrics, Gynecological Pathology, Surgical Pathology, Operative Surgery, Orthopedic Surgery, Genito-Urinary Surgery, X-Ray Diagnosis and Therapeutics, Cystoscopy, and Ophthalmology and Otology. The instruction is intended to meet the requirements of practitioners of medicine, and

is almost wholly of a practical character. It includes laboratory courses, demonstrations, bedside teaching, and clinics in the wards, dispensary, amphitheatre, and operating rooms of the hospital.

Detailed statements as to the courses of instruction and other information are given in the annual Catalogue and Announcement, which will be sent upon application to the Registrar of the Medical Department.

THE JOHNSTON SCHOLARSHIPS

These scholarships, of which there are three, known as the Henry E. Johnston Scholarship, the James Buchanan Johnston Scholarship, and the Henry E. Johnston, Jr. Scholarship, were founded by Mrs. Harriet Lane Johnston, of Washington, formerly of Baltimore, in memory of her husband and her two sons. They are awarded annually by the Trustees on the recommendation of the Academic Council. The stipend of each scholarship is the income of thirty thousand dollars. They are offered primarily to young men who have given evidence of the power of independent research. The holders of the scholarships will be expected to devote themselves to study and research in their chosen subjects, though they may be required to do some teaching. Each one will be designated as "Holder of the ..... Johnston Scholarship."

REGULATIONS

Candidates for the Johnston Scholarships must make application, in writing, to the President of the Johns Hopkins University before the first of May. The applications must be accompanied by such evidence of the candidates' fitness as they may be able to present. The President will refer the papers to the Academic Council, by whom the nominations will be made to the Board of Trustees at their meeting in June.

Holders of the scholarships may not engage in teaching elsewhere.

The scholars will be appointed for one year, but, if their work should prove satisfactory, they will generally be reappointed.

FELLOWSHIPS

Fellowships by Courtesy

The Academic Council may, at their discretion, by special vote, enroll as Fellows by Courtesy—

(*a*) Gentlemen who are or who have been teachers in colleges and other like institutions, and who wish, for brief periods, to avail themselves of the opportunities here afforded for study and for the use of books and laboratories.

(*b*) Holders of fellowships in other colleges, during their residence here.

(*c*) Those who have been fellows of this university and desire to continue in residence.

Fellows by Courtesy will not be exempt from the payment of fees, except by a special vote.

University Fellowships

Twenty fellowships, each yielding five hundred dollars but not exempting the holder from the charges for tuition, are annually awarded.

The system of fellowships was instituted for the purpose of affording to young men of talent from any place an opportunity of continuing their studies in the Johns Hopkins University, while looking forward to positions as professors, teachers, and investigators, or to other literary and scientific vocations. The fellowships are given to young men who wish to follow systematically through the year the instructions of the teachers here engaged, and those who are appointed are expected to proceed to the degree of Doctor of Philosophy. The appointments are made not merely in recognition of good work already

done, but as aids and incentives to good work in the future; in other words, the fellowships are not so much honors and prizes bestowed for past achievements, as helps to further progress and stepping-stones to honorable intellectual careers. They are not offered to those who are definitely looking forward to the practice of any one of the three learned professions (though such persons are not formally excluded from the competition), but are bestowed almost exclusively on young men desirous of becoming teachers of science and literature, or of devoting their lives to special branches of learning which lie outside of the ordinary studies of the lawyer, the physician, and the minister.

Each candidate is expected to submit his college diploma or other certificate of proficiency from the institution where he has been taught, with recommendations from those who are qualified to speak of his character and attainments. But this is only introductory. He must also submit, orally or in writing, such evidence of his past success in study and of his plans for the future, together with such examples of his literary or scientific work, as will enable the professors to judge of his fitness for the post. The examination is, indeed, in a certain sense competitive, but not with uniform tests, nor by formal questions submitted to the candidates. First, the head of a given department considers, with such counsel as he may command, the applicant's record. The professors then collectively deliberate on the nominations made by individual members of their body. The list upon which they agree, with the reasons for it, is finally submitted by the President of the University to the Executive Committee, and by them to the Trustees for final registration and appointment. By all these precautions the highest results which were anticipated have been secured. A company of most promising students has been brought together, and their ability as teachers and scholars has been recognized

by the calls they have received to permanent and desirable posts in various parts of the country.

The number of applications for fellowships has hitherto been very large, and it may have happened that some candidates have failed of appointment who were really superior to those selected. But, if so, this has resulted from the fact that a considerable number of applicants have each year forwarded to the university merely testimonials from their instructors, without examples of their own work; and, in consequence, the professors, from want of adequate knowledge have possibly passed over candidates who may have been in the highest degree meritorious.

The applicants are notified of the result by means of a printed list of the successful candidates.

The absence of candidates from Baltimore has been no bar to their appointment, in cases where adequate evidence of their claims has been presented; but it is obvious, from the nature of the case, that graduate students residing in Baltimore must have better opportunities than others of making their powers known to the appointing board, and during the last few years the number of persons appointed, who had not previously been resident here, is very small.

REGULATIONS

1. The application must be made prior to May 1, in writing, addressed to the President of the University, and he will refer the papers to the Academic Council, by whom the nominations will be made to the Board of Trustees, at their meeting in June. There is no prescribed form of application.

2. The candidate must give evidence of a liberal education, such as the diploma of a college of good repute; of decided proclivity towards a special line of study, such as an example of some scientific or literary work already performed; and of upright character, such as a testimonial from some instructor.

3. The value of each fellowship is five hundred dollars. The holder is not exempt from the charges for tuition. In case of resignation, promotion, or removal from the fellowship, payments will be made for the time during which the office shall have been actually held.

4. Every holder of a fellowship will be expected to perform such duties as may be allotted to him in connection with his course of study, to act when called upon as an examiner or as moderator in the examination room, to give all his influence for

the promotion of scholarship and good order, and in general to co-operate in upholding the efficiency of the university, as circumstances may suggest. He must reside in Baltimore during the academic year.

5. He will be expected to devote his time to the prosecution of special studies (not professional), under the direction of the head of the department to which he belongs, and before the close of the year to give evidence of progress by the preparation of a thesis, the completion of a research, the delivery of a lecture, or by some other method.

6. He may give instruction, with the approval of the President, by lectures or otherwise, to persons connected with the university, but he may not engage in teaching elsewhere.

7. He may be reappointed at the end of the year, but only for exceptional reasons.

8. Usually not more than two fellows will be appointed in any department of study.

9. As these fellowships are awarded as honors, those who are disposed, for the benefit of others, or for any other reason, to waive the pecuniary emolument, may do so, and still have their names retained on the honor list.

Adam T. Bruce Fellowship

This fellowship was founded in 1887 by the mother of Adam T. Bruce, Ph. D., late fellow and instructor in this university, as a memorial of her son, and is awarded annually. It is bestowed by the appointing board upon the candidate whom they consider most likely to promote biological science, and especially animal morphology, by original research. The stipend is the income of the Adam T. Bruce Fellowship endowment of ten thousand dollars. Preference is given to those who have already held fellowships in the Johns Hopkins University.

The electors consist of the President of the University, the chief instructor in animal morphology, the chief instructor in animal physiology, and a non-resident member annually chosen by the resident electors.

Regulations

Candidates for the Bruce Fellowship must make application, in writing, to the President of the Johns Hopkins University before the first of May. They must forward to the President, at the same time, such evidence of their qualifications for appointment

tion money is required from each student at the time of his enrolment. The caution money is repaid to the student when he leaves, if there are no charges against him. Special charges are made for breakage and for damage to apparatus.

Payment of bills may be made at the office of the Registrar in the Physiological Building, which is open from 9 a. m. to 5 p. m., or at the office of the Treasurer of the University, on North Howard Street, which is open daily from 9 a. m. to 4.15 p. m.

The fees required of graduates of medical colleges who desire to follow special courses in medicine, are stated in detail in the annual catalogue of the medical department.

Living Expenses

The university has no dormitories or other living accommodations. Students may find comfortable homes in the vicinity,—in boarding houses or with families. The price of board ranges from three dollars and a half a week upward, and rooms from one dollar and a half a week.

Lists of desirable places are kept by the Secretary of the university branch of the Young Men's Christian Association and by the Registrar of the medical department.

HISTORICAL STATEMENT

The Johns Hopkins University was founded by a merchant of Baltimore, Johns Hopkins, who bequeathed the greater part of his estate for the establishment of a university and a hospital. The University was incorporated August 24, 1867, the certificate of incorporation reading as follows:

CERTIFICATE OF INCORPORATION

Know all men by these presents, that we, Thomas M. Smith, William Hopkins, Lewis N. Hopkins, John W. Garrett, Alan P. Smith, John Fonerden, George W. Dobbin, George M. Gill, Andrew Sterett Ridgely, Thomas Donaldson, James A. L. McClure and Charles J. M. Gwinn, being citizens of the United States of America, and of the State of Maryland, and being desirous to form a corporation for the purpose of organizing a "University" for the promotion of education in the State of Maryland, do hereby declare and certify that we do, by this instrument of writing, and by virtue of and under the provisions of an Act of the General Assembly of Maryland, passed at the January session thereof in the year eighteen hundred and sixty-seven, and being the Act of eighteen hundred and sixty-seven, chapter three hundred and seventy-nine, form a corporation, under the name of "The Johns Hopkins University," for the promotion of education in the State of Maryland, which shall be governed and controlled by twelve Trustees, who shall manage the concerns thereof, and which said twelve trustees shall be Francis T. King, Lewis N. Hopkins, Thomas M. Smith, William Hopkins, John Fonerden*, John W. Garrett, Francis White, Charles J. M. Gwinn,

*On the death of John Fonerden, James Carey Thomas was elected to fill the vacancy.

Galloway Cheston, George W. Dobbin, Reverdy Johnson, junior, and George William Brown, and which said University shall be located in Baltimore County, in the State of Maryland.

Witness our hands and seals, set hereto on this twenty-fourth day of August in the year eighteen hundred and sixty-seven.

The following amendments to the charter have been enacted by the State Legislature.

I

AN ACT to grant certain additional powers to the "Johns Hopkins University," a corporation incorporated under the General Laws of Maryland.

Section 1. Be it enacted by the General Assembly of Maryland, That "The Johns Hopkins University," a corporation duly incorporated by certificate, recorded in the office of the Clerk of the Circuit Court for Baltimore County, shall have powers to establish branches of the said University in the City of Baltimore, to hold, or to purchase and hold, all property in said City, needed for the successful conducting of the branches of the said University in said City, and to keep and maintain a principal office in said City for the conduct of the business of the said University.

Section 2. And be it enacted, That the said "The Johns Hopkins University" shall have power to admit students of the said University, who shall merit the distinction, to the office and professon of Surgeon, or to the degree of Doctor of Medicine, or of Doctor of Laws, or of Bachelor or Master of Arts; to grant to students in such University, such certificates of proficiency and attainments in any special study as the said University may see proper to confer; and to grant the honorary degree of Doctor of Laws, Doctor of Medicine, and Master of Arts, or such other degrees as may be proper, to any person who may merit such distinction, whether such person be a student of such University or not.

Section 3. And be it enacted, That this Act shall take effect from its passage.

Approved March 22, 1876.

II

AN ACT to authorize the Trustees of the Johns Hopkins University, a corporation incorporated under the General Laws of Maryland, to make and constitute the President for the time being of its University and each of his successors in said office, during their respective terms thereof, a member ex-officio of the Board of Trustees of the Johns Hopkins University, in addition to the number of twelve Trustees of said University now authorized by law.

Section 1. Be it enacted by the General Assembly of Maryland, that the Trustees of the Johns Hopkins University, a corporation duly incorporated by certificate under the General Laws of Maryland, be and they are hereby authorized and empowered to make and constitute the President for the time being of the Johns Hopkins University and each of his successors in said office, during their respective terms thereof, a member ex-officio of said Board of Trustees in addition to the number of twelve Trustees of said University now authorized by law.

Section 2. And be it enacted that this Act shall take effect from the date of its passage.

Approved April 4, 1892.

As stated in the foregoing certificate, the corporate name of the institution is "The Johns Hopkins University."

The Board of Trustees organized June 13, 1870, and held their first business meeting February 6, 1874. The founder had died December 24, 1873, in the seventy-ninth year of his age,—having been born May 19, 1795. The election of a President of the University took place December 30, 1874, the choice falling upon Daniel Coit Gilman, at that time President of the University of California. President Gilman was inaugurated February 22, 1876, and instruction began October 3, following. The Johns Hopkins Hospital was dedicated May 7, 1889, and this paved the way for the opening of the medical school of the University four years later (October 1, 1893).

President Gilman resigned his office February 22, 1901, after a service of twenty-five years, and he was succeeded by Ira Remsen, Professor of Chemistry in the University,

whose election took place June 3, 1901. On the twenty-first and twenty-second of February, 1902, the University celebrated the completion of twenty-five years of work, and President Remsen was inaugurated.

The work of the University began in two houses at the corner of Howard and Little Ross Streets, in Hopkins Hall and a chemical laboratory on Little Ross Street,—the last two buildings having been erected by the Trustees. As the need arose, other buildings were constructed,—including a considerable addition to the chemical laboratory, a biological laboratory, a physical laboratory, a gymnasium, a home for the Young Men's Christian Association (the gift of Mr. Eugene Levering), and finally McCoy Hall, a large central building containing offices of administration, assembly room, the general library, and numerous smaller rooms for seminaries, department libraries, classes in languages, history, etc. The medical school is housed in several buildings in another section of the city, adjoining the Johns Hopkins Hospital.

The Hospital forms a part of the medical school of the University, in accordance with the expressed wish of the founder. It occupies a commanding site facing North Broadway. The buildings include a central structure chiefly devoted to administration, two large private wards, a considerable number of separate buildings containing the public wards, a large dispensary building, a surgical building and amphitheatre, a pathological institute, and a nurses' home. The Harriet Lane Home for Invalid Children, the Phipps Psychiatric Clinic, and the Phipps Dispensary for the Treatment of Tuberculosis are important adjuncts to the Hospital and are situated within its grounds.

At the time of President Remsen's inauguration, it was announced that a suburban site had been given to the University by Messrs. William Wyman, William Keyser,

Francis M. Jencks, Julian LeRoy White, and William H. Buckler, of Baltimore, and Samuel Keyser, of New York. This site comprised originally one hundred and seventy-six acres of land within the city limits, about two miles directly north of the Washington Monument. About fifty acres have been deeded to the city for a public park. The hope was expressed by the donors that the sum of one million dollars would be contributed by the friends of the University within a certain time, to be added to the permanent endowment funds of the University. This hope was realized July 1, 1902. The development of the new site is in progress. A botanical laboratory and greenhouse have been erected, and a fine athletic field is now in use by the students. A general scheme of arrangement of the future buildings has been accepted by the trustees, as the result of a competition by selected architects, and the plans of several of the most important structures are now in course of preparation. The funds required for these buildings have not yet been supplied, and, until that need is met, a removal is not possible.

The original endowment of the University amounted to somewhat over $3,000,000. This has been supplemented by several gifts, including the Endowment Fund of 1902 ($1,000,000), the John W. McCoy Fund ($235,000), the Women's Medical School Fund ($380,000), the Adoniram J. Robinson Fund ($42,000), the Herbert B. Adams Fund ($50,000), the Johnston Scholarship Fund ($90,000), the Donovan Fund ($100,000), and several others,—the income-bearing funds having a "book value" of over $4,500,000. The real estate and buildings are valued at $1,655,000, the books, scientific apparatus, and general equipment at $307,000. The assets of the University have thus a total value of more than $6,500,000.

WILLIAM S. RAYNER FELLOWS IN SEMITIC LANGUAGES

The Rayner Fellowship was founded in 1889 by Mrs. Bertha Rayner Frank and Mr. Albert W. Rayner, of Baltimore, to perpetuate in this university the name of their father, Mr. William S. Rayner, who had made unusual attainments in the Hebrew language and was interested in the promotion of Semitic studies. The gift amounted to $10,000.

When the institution is not named, this university is to be understood. The figures in brackets indicate the tenure of the fellowship. (F) indicates that the person has held a university fellowship here.

WILLIAM S. RAYNER FELLOWS IN SEMITIC LANGUAGES

The Rayner Fellowship was founded in 1889 by Mrs. Bertha Rayner Frank and Mr. Albert W. Rayner, of Baltimore, to perpetuate in this university the name of their father, Mr. William S. Rayner, who had made unusual attainments in the Hebrew language and was interested in the promotion of Semitic studies. The gift amounted to $10,000.

When the institution is not named, this university is to be understood. The figures in brackets indicate the tenure of the fellowship. (F) indicates that the person has held a university fellowship here.

Karl Josef Grimm, Ph. D. (F), Prof. of German, Pennsylvania Coll. [1899-01]
Theodore Clinton Foote, Ph. D., Clergyman, Roland Park, Md. [1901-03]
Gabriel Oussani, A. B., S. T. B., (F), Prof. of Italian, Latin, and Oriental Lang., Catholic Seminary, N. Y. [1903] *Did not enter on the fellowship.*
William George Seiple, Ph. D., Missionary, Sendai, Japan. [1903-04]
Aaron Ember, Ph. D., (F), Assoc. in Hebrew. [1904-09]

UNIVERSITY FELLOWS

Arranged under the date of first appointment. Figures in brackets indicate the tenure of the fellowship, when it was held more than one year. When the institution is not named, this university is to be understood. *Deceased.

LIBRARIES

1. THE UNIVERSITY LIBRARY numbers 142,000 bound volumes, selected with special reference to the instruction here given. It is arranged in several collections, of which these are the chief:

General Reference,	Classical,
Historical,	Semitic,
Economics,	Sanskrit,
Political Science,	Modern Languages,
Mathematical and Physical,	McCoy Art Library,
Chemical,	Medicine,
Biological,	Physiology and Anatomy,
Geological,	Philosophy and Psychology.

The reference library and reading room is open daily from 9 a. m. to 6 p. m.; the other rooms in accordance with special regulations.

The library receives the publications of the leading scientific societies of the world and the chief literary and scientific periodicals. The whole number of serials received exceeds fifteen hundred. The list is supplemented by those of the Peabody Institute and other institutions, so that the whole number of journals accessible (exclusive of ephemeral publications) exceeds two thousand. Important books are received by the library as soon as published, by purchase or by the courtesy of dealers.

2. THE PEABODY LIBRARY is a choice collection of books purchased since 1861. It is particularly full in academic transactions, long historical series, and costly illustrated books. It numbers 168,000 volumes, well bound, catalogued, and arranged. It is open daily, without charge, from 9 a. m. to 10.30 p. m.

3. THE ENOCH PRATT FREE LIBRARY numbers 259,394 volumes and is open daily, without charge.

4. THE MARYLAND HISTORICAL SOCIETY LIBRARY contains 44,020 volumes of historical works and is open daily.

5. Other libraries of Baltimore are the New Mercantile Library (76,000 volumes), the Bar Library (28,000 volumes), the Medical and Chirurgical Library (18,000 volumes), the Maryland Diocesan Library (30,000 volumes).

6. Washington is so near that its museums and libraries may be easily visited. Among the chief institutions of interest to students are these:

The Library of Congress,
The Smithsonian Institution and National Museum,
The Army Medical and Surgical Museum and Library,
The U. S. Coast and Geodetic Survey,
The U. S. Geological Survey,
The U. S. Naval Observatory,
The Libraries of the Departments and Bureaus,
The Corcoran Art Gallery.

DISSERTATIONS FOR THE DEGREE OF DOCTOR OF PHILOSOPHY IN THE JOHNS HOPKINS UNIVERSITY.

REGULATIONS OF THE TREASURER'S OFFICE

I. The Treasurer's Office is open daily from 9 a. m. to 4 p. m.

II. All bills should be presented at that place, endorsed as correct by the person under whose authority the expense has been incurred.

III. No member of the academic staff is allowed to incur a bill in the name of the university, unless authority is given for the same by the Trustees, in advance, either as an item in the annual budget, or as a special appropriation. Blank forms of application are provided for special requisitions.

IV. Orders for books and apparatus to be imported from Europe will not be considered authorized, unless countersigned by the President or the Treasurer of the University.

All goods must be consigned to and addressed "The Johns Hopkins University, Baltimore, Md." Goods for other parties (societies or individuals) must not be included in the university cases. Invoices, sworn to before the U. S. Consul, must be sent by mail, and a duplicate invoice by the following mail, both addressed to The Johns Hopkins University

Unless otherwise ordered, goods from Europe should be sent as follows:

From Germany by the North German Lloyd steamers sailing for Baltimore from Bremen; from England by steamship lines from Liverpool to Baltimore; from France and Italy, via Havre and Liverpool.

Printed copies of instructions to shippers, which can be obtained at the Treasurer's Office, should in all cases be enclosed with the orders.

V. The Treasurer's Office will make purchases, at wholesale rates, of supplies which are required for the current needs of the university.

VI. Such pass books as are authorized by the Treasurer should be presented for balance and settlement every month.

VII. The wages of all persons employed by the university will be paid at the Treasurer's Office.

VIII. When C. O. D. packages are expected, previous arrangements should be made for their reception.

IX. Outlays made for individuals (express parcels, postage, telegraph messages, etc.) should be settled at once.

X. An annual allowance is made by the Trustees, in the budget, for such expenses as they approve, and in deciding on the items they are governed by a consideration of the general interests of the university, as well as by the needs of special branches of instruction. Balances to the debit or credit of any account are carried forward to the new account at the opening of each financial year (September 1). A statement of the amount of the balance and of any additional appropriation will be communicated to the parties severally interested, if requested, after the Trustees' meeting in October.

SCIENTIFIC SOCIETIES

1. The Scientific Association, meeting monthly, under the presidency of Professor Ames.

2. The Philological Association, meeting monthly, under the presidency of Professor Gildersleeve.

3. The Historical and Political Science Association, meeting fortnightly.

4. Naturalists' Field Club, which makes weekly excursions during the spring and autumn and holds monthly meetings for the presentation and discussion of papers.

There are also companies which meet weekly in the laboratories for the reading of the scientific journals, and seminaries in several departments of study.

STATEMENTS IN RESPECT TO THE COURSES OF INSTRUCTION

The Johns Hopkins University has had in view, from the beginning, two main objects,—the advancement of learning through investigations conducted by its teachers and its properly qualified students, and the communication of learning through carefully planned courses of instruction. The facilities which it provides and its methods of administration are intended both for the encouragement of research, in the case of those competent to undertake it, and for the discipline and guidance of those whose chief concern is the acquisition of knowledge.

The work of the University is carried forward

I. Under the Faculty of Philosophy.
II. Under the Faculty of Medicine.

The students enrolled under the Faculty of Philosophy are:

(1) Those who have obtained a baccalaureate degree from a college of good standing, and desire to follow advanced courses in scientific, literary, or historical subjects; and also persons who wish to take advantage of the opportunities for individual investigations here afforded. Women are admitted, with the consent of the professors under whom they wish to work, on the same terms as men.

(2) Undergraduate students, who are, in most cases, looking forward to the degree of Bachelor of Arts, but some of whom are engaged in special studies without reference to graduation.

The requirements for admission to the undergraduate courses, the arrangement of these courses in the several "Groups," etc., are stated on pages 233-254. More detailed information is given in "The Collegiate Instruction of the Johns Hopkins University," which may be obtained on application, personally or by letter, to the Registrar of the University.

The students enrolled under the Faculty of Medicine are:

(1) Candidates for the degree of Doctor of Medicine. These must be college graduates, or must give evidence by examination that they possess the attainments indicated by a baccalaureate degree in arts or sciences. Women are admitted on the same terms as men.

(2) Doctors of Medicine desiring to pursue certain special courses, which are annually announced.

The terms of admission to the medical department and the general plan of instruction are briefly stated on pages 256-260. Detailed information is given in the "Catalogue and Announcement," which will be sent upon application to the Registrar of the department.

I. FACULTY OF PHILOSOPHY

Advanced students are received whether they are candidates for a degree or not, and they are permitted to attend such lectures and exercises as they may select. On entering the university they are expected to present their diplomas and certificates from the institutions with which they have been connected, and also letters of introduction. They are not examined by the university for admission, but each instructor satisfies himself of the attainments of those who wish to follow his guidance, before admitting them to his classes.

The professors are ready to give personal counsel to those who seek it; books and instruments adapted to investigation and advanced work have been liberally provided; seminaries limited to a few advanced students have been organized in various subjects; societies devoted to philology, to mathematical, physical, and natural science, and to history and political science, afford opportunities for the presentation of memoirs and original communications, and there are also conferences for the

reading and discussion of philological, philosophical, biological, physical, geological, and chemical papers; during the year courses of lectures are given by resident and non-resident professors on topics to which they have given special attention; the libraries of the Peabody Institute and Maryland Historical Society, founded for the benefit of scholars, are easily accessible; the issuing, under the auspices of the Trustees, of publications devoted to mathematics, chemistry, philology, biology, the modern languages, and history, brings the university into advantageous connection with other foundations; and the university reading room, which is constantly open, is liberally supplied with new and standard books and with the literary and scientific journals of this and other lands.

Instruction is carried on in the different departments by methods which vary with the nature of the subject and the character and proficiency of the scholars; but in all alike the end is the same,—that, while the students are becoming familiar with the work prosecuted and the results attained elsewhere, and are adding to their general intellectual culture, they may be encouraged to become independent and original investigators in their chosen fields of labor. Within reasonable limits the university will provide such books, apparatus, and material as may be requisite for this purpose.

The principal subjects in which advanced instruction is now provided are these:

Mathematics.
Physics and Astronomy.
Chemistry.
Geology and Mineralogy.
Zoology.
Botany.
Physiology.
Pathology.
Greek.
Latin.
Classical Archæology and Art.
Sanskrit and Comparative Philology.
Semitic Languages.
Anglo-Saxon and English.
Romance Languages.
German.
Germanic Philology.
History.
Political Economy.
Political Science.
Philosophy, Psychology, and Education.

MATHEMATICS

The advanced courses are so arranged that a qualified student gets in three years the more important points of view of the whole subject. The courses are elastic in character, subjects being introduced as they are needed. In general, the plan pursued is to foster independent inquiry on the part of the student. Once embarked on investigation, he uses all the apparatus of lectures and library with intelligent purpose. The seminary, which meets weekly, is primarily intended for the presentation of the results of the student's own thinking. Literature either intrinsically important or opportune is presented and discussed in the reading class, which also meets weekly.

ADVANCED COURSES*

1. Mathematical Seminary.

One hour weekly. Professor MORLEY.

2. Reading Class.

One hour weekly. Professor MORLEY.

3. Higher Geometry.

Two hours weekly, through the year. Professor MORLEY.

This is a general course in Geometry, covering in three years such matters as Projective Geometry, the Invariants of algebraic forms, Line Geometry, Conformal Geometry, Geometry on an algebraic curve or surface.

4. Theory of Functions.

Two hours weekly, second half-year. Professor MORLEY.

Algebraic Functions and their integrals; Elliptic, elliptic modular, and general automorphic functions; Theory of the potential.

5*. Dynamics.

Two hours weekly, first half-year (every other year). Professor MORLEY.

Special stress is laid on Rigid Dynamics.

*Courses thus marked will *not* be given in 1909-10.

6. Vector Analysis.

Two hours weekly, first half-year (every other year). Professor MORLEY.

7. Elementary Theory of Functions.

Two hours weekly, through the year. Dr. COHEN.

An introduction to the theories of functions of a real and a complex variable.

8. Differential Equations.

Two hours weekly, through the year. Dr. COHEN.

Including, in three years, Ordinary Differential Equations, their integral curves and singular points; Partial Differential Equations; Lie's theory.

9*. Differential Geometry.

Two hours weekly, through the year. Dr. COHEN.

Including a study of Curves in space; Sufaces and lines upon them; Spherical representation; Applicability of surfaces.

10*. Calculus of Variations.

Two hours weekly, one half-year. Dr. COHEN.

11. Theory of Numbers.

Two hours weekly, one half-year. Dr. COHEN.

12. Theory of Groups.

Two hours weekly. Dr. COBLE.

Including Theory of Equations, Finite Geometries, Theory of algebraic forms.

13*. Theory of Correspondence.

Two hours weekly. Dr. COBLE.

Including such matters as Cremona Transformations, general birational transformations.

14. Theory of Probability.

Two hours weekly, one half-year. Dr. COBLE.

Including the applications to statistics and the Theory of Errors.

---

*Course thus marked will *not* be given in 1909-10.

UNDERGRADUATE COURSES

1. Solid Geometry; Algebra (special topics).

Three hours weekly, first half-year. Professor HULBURT and Dr. COBLE.

Plane Analytic Geometry.

Three hours weekly, second half-year. Professor HULBURT and Dr. COBLE.

Exercises.

Two hours weekly, through the year.

2. Differential and Integral Calculus.

Three hours weekly, through the year. Professor HULBURT.

Exercises.

Two hours weekly, through the year.

3. Differential and Integral Calculus (special topics); Determinants; Solid Analytic Geometry; Projective Geometry.

Three hours weekly, through the year. Professor HULBURT.

Exercises.

Two hours weekly, through the year.

4. Differential Equations.

Three hours weekly, first half-year. Dr. COHEN.

Descriptive Geometry.

Three hours weekly, second half-year. Dr. COHEN.

Exercises.

Two hours weekly, through the year.

In connection with the three hours' class-room instruction, the instructor in each course meets his students weekly in a two-hour session, for the purpose of supplementary explanation and application of the principles taught in the class-room. This is the part of each course designated as "Exercises." It is not intended that these shall increase the amount of work required of the student, but rather that they shall aid him in the understanding and preparation of the work of the class.

Physics and Astronomy

The Physical Laboratory offers facilities in the form of apparatus, libraries, and machine shops to students who wish to pursue experimental investigations in any field of Physics. If the results of these are to be offered as a dissertation for the degree of Doctor of Philosophy, the work must be done under the general direction of the Director of the Laboratory, or of one of the other professors. For students carrying on experimental researches the laboratory is open daily, except Saturdays, from 9 a. m. until 5 p. m., and on Saturdays from 9 a. m. until 1 p. m.

Regular courses of instruction in both Physics and Astronomy are given in the form of lectures and laboratory exercises. They may be classified as Advanced and Elementary. The former are designed primarily for graduate students; the latter, for undergraduates.

Advanced Courses

Seminary and Journal Meetings

All advanced students meet with the instructors twice each week,—once in the Physical Seminary, and once for the discussion of the current Physical Journals.

During the year 1909-10 the questions to be considered in the Seminary will refer to the history of the development of the present knowledge of Heat and Radiation.

Lectures

1. General Physics. Professor Ames.

Four hours weekly, through the year.

This is a course of lectures in Mathematical Physics continuing for three years and including the subjects of Theoretical Mechanics, Elasticity, Hydrodynamics, Sound, Thermodynamics, Heat Conduction, Electricity and Mag-

netism, and Light. During the year 1909-10 the lectures will be on Thermodynamics, Heat Conduction and Radiation.

2. Selected Problems in Advanced Physical Optics. Professor WOOD.

Three hours weekly, through the year.

3. Experimental Lectures on Conduction of Electricity in Gases. Professor WOOD.

One hour weekly, through the year.

4. Applied Electricity. Associate Professor WHITEHEAD.

Two hours weekly, through the year.

5. Applied Electricity (*Advanced Course*). Associate Professor WHITEHEAD.

Two hours weekly, through the year.

6. Celestial Mechanics. Dr. J. A. ANDERSON.

Two hours weekly, through the year.

7. Cosmical Physics. Dr. J. A. ANDERSON.

Two hours weekly, through the year.

8. General Astronomy. Mr. L. E. JEWELL.

Two hours weekly, through the year.

9. (*a*) Radiation. Dr. A. H. PFUND.

One hour weekly, first half-year.

(*b*) Magneto-Optics. Dr. A. H. PFUND.

One hour weekly, second half-year.

10. Mechanics of the Earth's Atmosphere. Dr. CLEVELAND ABBE.

One hour weekly, through the year.

Laboratory Courses

1. Special Exercises in Physics in preparation for independent research; under the direction of Professors AMES, WOOD, BLISS, and WHITEHEAD.

2. Applied Electricity. Associate Professor WHITEHEAD.

3. Use of Astronomical and Astrophysical Instruments. Dr. J. A. ANDERSON and Mr. L. E. JEWELL.

For students following these courses the laboratory is open daily except Saturdays, from 9 a. m. to 5 p. m.; the observatory is open every favorable night.

ELEMENTARY COURSES

1. Elements of Physics.

Three hours weekly, through the year. Professor AMES.

This course of lectures is based upon Ames's "Text-book of General Physics," and is intended to include the field of Physics in an elementary manner. It presupposes a knowledge of the elements of plane trigonometry. Course 4 of laboratory work (see below) is arranged to accompany these lectures.

2 *and* 3. The four following series of lectures are given each year and are combined, together with the corresponding laboratory work (see Physics 5 below), into two courses known as Physics 2 and Physics 3. The mode of combination varies from year to year according to the needs of the students applying.

a. Elementary Theoretical Mechanics.

Three hours weekly, twelve to fifteen weeks. Professor BLISS.

This course is designed to serve as an introduction to Mathematical Physics, and students following it must have a knowledge of the elements of the Calculus.

b. Elementary Electricity and Magnetism.

Three hours weekly, fifteen to twenty weeks. Professor BLISS.

This is an introduction to the mathematical theory of the electrostatic and magnetic fields and electric currents. Course "*a*" or an equivalent preparation is assumed.

c. Elementary Thermodynamics.

Three hours weekly, twelve to fifteen weeks. Professor BLISS.

The object of this course is to familiarize the student with the fundamental ideas of Thermodynamics, such as Temperature, Entropy, and Reversibility. By way of illustration applications are made to very elementary problems in heat engines, solutions, and electro-chemistry, so far as time will permit. Course "*a*" or an equivalent preparation is assumed.

d. Physical Optics.

Three hours weekly, fifteen weeks. Dr. PFUND.

This course is a more advanced treatment of the subject of optics, special emphasis being laid on the subjects of interference,

diffraction, polarization, and applications to modern instruments of high efficiency.

4. Laboratory Work for Beginners.

Two afternoons weekly, through the year. Professor BLISS and assistants.

In this elementary work the students are taught methods of exact observation and measurement, and, so far as possible, they study the fundamental phenomena of Physics in a quantitative manner. The exercises given in Ames and Bliss's "Manual of Experiments in Physics" serve as a basis for this work.

5. Laboratory Work, in connection with Physics 2 and 3.

To complete each of these courses the student is required to pursue two of the four following groups, making together two afternoons a week for the year.

a. Mechanics.

Two afternoons weekly, twelve weeks. Professor BLISS.

In this course the students are taught methods of exact measurement of time, length, and mass, as well as the determination of the various mechanical and elastic constants.

b. Electricity and Magnetism.

Two afternoons weekly, twenty weeks. Professor BLISS.

Special attention is given to instruction in modern methods of measurement of various electrical quantities and in the use of improved apparatus. Those qualified and desiring such instruction may substitute work with dynamos, motors, and transformers for part of the course.

c. Heat.

Two afternoons weekly, one half-year. Professor BLISS.

This includes methods of measuring temperature, including the use of thermocouples, resistance thermometers and pyrometers, together with other exercises illustrating lecture course "*c*" above.

d. Optics.

Two afternoons weekly, one half-year. Dr. PFUND.

The students are given a thorough working knowledge of experiments dealing with fundamental principles, as well as of experiments involving the use of modern types of optical instruments, such as the plane and concave grating, Michelson and Fabry and Perot Interferometers, Polarimeters, etc.

6. The Elements of Astronomy.

Two hours weekly, through the year. Mr. L. E. JEWELL.

In this course of lectures attention is directed to those branches of astronomy which should be known by all students of physics, and the theory of various instruments is explained.

7. Observatory Work in Astronomy.

Through the year. Mr. L. E. JEWELL.

The observatory contains an equatorial, transit, meridian circle, and various other instruments, instruction in the use of which is given.

CHEMISTRY

The Chemical Laboratory is equipped with apparatus for nearly all kinds of scientific chemical investigations, and it is the policy of the department to provide every needed facility for promising investigations of a special or unusual character.

The laboratory is open daily, except Saturdays, from 9 a. m. until 5 p. m., and on Saturdays from 9 a. m. until 1 p. m.

ADVANCED COURSES

I. *Journal Meetings*

These meetings are held at 9 a. m. on Saturdays. throughout the year, and are under the direction of Professor REMSEN. Toward the end of the year, those who have been engaged in research give an account of the progress of their investigations.

II. *Lectures*

(*a*) ORGANIC CHEMISTRY

The lectures in Organic Chemistry are given by Professor REMSEN, except those upon certain chapters of the subject, which are given by Associate Professor ACREE. The course consists of three lectures weekly and extends over two years.

(*b*) INORGANIC CHEMISTRY

The course on this subject is given by Professor MORSE. It consists of two lectures weekly and extends over three years.

(*c*) PHYSICAL CHEMISTRY

Three lectures weekly are given throughout the year by Professor JONES.

(*d*) SPECIAL TOPICS IN CHEMISTRY

Short courses of lectures upon special topics are given each year by Professor JONES and Associate Professor ACREE.

III. *Laboratory Courses*

(*a*) QUALITATIVE ANALYSIS

This course is under the direction of Professor RENOUF, and is designed to meet the needs of those graduate students whose knowledge of the subject is defective.

(*b*) QUANTITATIVE CHEMISTRY

Under the direction of Professor MORSE.

(*c*) PHYSICAL-CHEMICAL METHODS

The routine work in this branch usually occupies from four to six weeks and is under the direction of Professor JONES.

(*d*) ORGANIC PREPARATIONS

Under the direction of Associate Professor ACREE. The required work occupies from eight to twelve weeks.

The student who is a candidate for the degree of Doctor of Philosophy, must give evidence that he has a satisfactory knowledge of elementary chemistry and is familiar with laboratory methods, before he is permitted to undertake the advanced courses. These consist of lectures, and laboratory exercises in (*b*) quantitative chemistry, (*c*) physical-chemical methods, and (*d*) organic preparations. The order in which these are taken is not fixed, but is arranged with reference to the convenience of the student.

Having completed the routine work of the laboratory, the student is assigned by the director of the laboratory to one of the staff who proposes to him a subject for investigation, which may be made the basis of the Doctor's dissertation,* and who thenceforth directs his work in the laboratory. It sometimes happens that the student has sound reasons for preferring some particular line of research, and this course is allowed if the circumstances permit.

For those who do not look forward to the degree, the rules are less rigid. Any person admitted to the University as a special student is permitted to take any of the laboratory or lecture courses for which he is qualified by previous training. The department also provides laboratory facilities for experienced chemists who wish to come to it for the purpose of carrying out researches of their own.

UNDERGRADUATE COURSES

1. Introduction to General Chemistry.

(*a*) *Lectures and recitations three hours weekly, through the year.* Professor RENOUF.

(*b*) *Laboratory work, six hours weekly, through the year.* Professor RENOUF, Dr. GILPIN, and assistants.

No previous knowledge of chemistry is required. The class-room work is based on Remsen's Chemistry (Briefer Course), and covers the field of inorganic chemistry, as far as possible. The last twelve class-room exercises give a brief sketch of organic chemistry, particularly for the benefit of those students whose study of chemistry is confined to the minor course. In the laboratory the student repeats the experiments performed in the class-room, and, in addition, has some practice in simple quantitative analysis and in making inorganic preparations. Each student is required to keep a note-book of his work.

2. Advanced Inorganic Chemistry and Qualitative Analysis.

(*a*) *Lectures and recitations, three hours weekly through the year.* Dr. GILPIN.

*The length of time required for the completion of the dissertation work cannot be definitely stated, but, as a rule, from one year to one and one-half years should be allowed for it in the plans of the candidate.

(*b*) *Laboratory work, six hours weekly, through the year.* Professor RENOUF, Dr. GILPIN, and assistants.

The class-room work in the second year is intended to give a more thorough knowledge of chemical and physical-chemical laws, of the properties of chemical compounds, and of the principles of qualitative analysis. The laboratory work is in qualitative analysis and inorganic preparations.

3. Chemistry of the Compounds of Carbon.

(*a*) *Lectures and recitations, three hours weekly, through the year.* Dr. GILPIN.

(*b*) *Laboratory work, six hours weekly, through the year.* Professor RENOUF, Dr. GILPIN, and assistants.

The class-room work of the third year is devoted to the study of Organic Chemistry. The laboratory work is the making of organic preparations, but also includes practice in the analytic detection of organic substances and in analytical methods of value to those intending to study medicine. The text-book used is Remsen's Organic Chemistry.

This course is open only to those who have completed Courses 1 and 2.

4. Laboratory Work only.

Laboratory work, six hours weekly, through the year. Professor RENOUF, Dr. GILPIN, and assistants.

The laboratory work comprises advanced qualitative analysis, including technical methods, difficult inorganic preparations, and assaying. Those contemplating graduate work in chemistry will devote half of the year to the study of Volhard and Zimmermann's "Experiments in General Chemistry"; others may substitute quantitative analysis.

Students of the fifth group whose principal subject is chemistry, are required to follow the courses in chemistry during the first, second, and third years. Those who look forward to the study of medicine, are advised to follow the courses in chemistry in the first and second years, and to take the course in the chemistry of compounds of carbon in their last year of residence.

The fourth-year course is intended for those students only who have satisfactorily absolved the courses of the three preceding years. It will be a help to those who intend to follow graduate work in chemistry, and also to those who desire to make a practical use of their knowledge of chemistry after receiving the bachelor's degree.

Geology

The Geological Laboratory offers facilities in the form of collections, instruments, and libraries to students wishing to pursue special researches in geology and its allied subjects—paleontology, petrography, mineralogy, etc. Such researches may be carried on independently, or with the co-operation of the members of the geological staff; but, if the student intends to become a candidate for a degree, the work must be conducted under the general direction of the head of the department or of his associates.

The laboratory, collections, and libraries are open to the advanced students daily, from 9 a. m. until 5 p. m.

Regular courses of instruction in geology are given in the form of lectures, laboratory exercises, and field work. The advanced courses are adapted to the requirements of students of maturity, the general courses to students desiring an elementary or cultural training in the subject. The former are designed primarily for graduate students in geology; the latter for undergraduates or for students from other departments wishing a more general knowledge of the subject.

ADVANCED COURSES

Seminary and Journal Meetings

The advanced students meet with the instructors once each week for the discussion of current publications dealing with geology. During the latter half of the year papers are presented giving the results of researches conducted in the laboratory, or summarizing the present state of knowledge regarding geological questions of general interest.

Lectures

1. Historical Geology. Professor Clark.
Two hours weekly, through the year.

2. Systematic Paleontology. Professor CLARK.

Two hours weekly, through the year.

3. Economic Geology. Professor CLARK.

Two hours weekly, through the year.

4. Geological Physics. Professor REID.

Two hours weekly, through the year.

5. Exploratory Surveying. Professor REID.

Two hours weekly, through the year.

6. Advanced Mineralogy. Professor MATHEWS.

Three hours weekly, through the year.

7. Petrography. Professor MATHEWS.

Three hours weekly, through the year.

8. Paleobotany. Mr. E. W. BERRY.

Two hours weekly, first half-year.

Laboratory Courses

Laboratory studies in advanced courses are carried on daily from 9 a. m. until 5 p. m. under the general direction of the professors in charge, who are accessible at all times. An afternoon is devoted especially to each course, when the subject matter is more fully developed by quizzes, demonstrations, etc.

1. Paleontology. Professor CLARK and Mr. BERRY.

Weekly, through the year.

2. Petrography. Professor MATHEWS.

Weekly, through the year.

3. Advanced Mineralogy. Professor MATHEWS.

Weekly, through the year.

4. Geological Field Methods. Professor MATHEWS.

Weekly, during the fall and spring.

UNDERGRADUATE COURSES

1. Elements of Geology.

Three hours weekly, through the year, with laboratory work. Associate Professor SWARTZ.

This course is introductory to the more advanced work in geology. It includes a discussion of the origin of the features of the surface of the earth, the phenomena of earthquakes, volcanoes, and mountain-making, followed by an outline of the past

history of the earth. The laboratory work comprises the study of illustrative material, together with frequent excursions to neighboring points of interest, where the principles of the science are studied in the field. A longer excursion is made in the spring to points of especial interest for geological study. This course is illustrated by maps, charts, lantern views, and the abundant collections of the university.

2. Mineralogy and Elementary Petrography.

Three hours weekly, through the year, with laboratory work. Associate Professor SWARTZ.

This course includes the study of crystallography, a discussion of the more important minerals, and a brief consideration of the origin and characteristics of the chief types of rocks. Numerous excursions are made to points of interest in the vicinity of Baltimore, which is unusually rich in the variety of its rocks and minerals. Emphasis is laid upon laboratory work, which includes the study of crystal models, the identification of minerals by means of the blowpipe and by inspection, and the examination of rocks in the laboratory and in the field. A knowledge of chemistry is required for the pursuit of this course.

3. Applied Geology.

Three hours a week, through the year, with laboratory work. Professor MATHEWS.

This course is devoted to a discussion of the non-metallic minerals and rocks which are worked commercially. The knowledge of geology and mineralogy gained in the preceding courses is applied to the recognition of useful minerals, their mode of occurrence, properties, values, and uses. The main sources of coal, oil, clay, building-stones, abrasives, gems, etc., the way they are won, and their economic importance, are treated with more or less detail. The aim of the course is to supply such information regarding mineral resources as an educated man should possess. The treatment of the technical questions of metallurgy or mining must be sought in technical schools.

State Scientific Bureaus connected with the Department.—Two scientific bureaus, established by the legislature and maintained at the expense of the State, are carried on in connection with the geological department. They are the Maryland Geological and Economic Survey and the Maryland State Weather Service. Professor Clark is the director of both these organizations, which are concerned with a study of the geology and physical features of the State of Maryland. The work is carried on under his direction mainly by the instructors and students

of the department. A State Forestry Bureau, of which Professor Clark is Executive Officer, is also located in one of the buildings of the geological department.

Advantages afforded by Proximity to Washington.—Washington is less than an hour distant from Baltimore. This renders it possible to take frequent advantage of the facilities afforded by that city, where the officers of the various scientific bureaus and societies give the students of the university every opportunity to examine the rich collections and libraries under their control.

Field Work.—The area of the State of Maryland includes, notwithstanding its comparatively small size, a remarkable sequence of geological formations. The ancient rocks of the earth's crust, as well as those still in the process of deposition, are found, while between these wide limits there is hardly a geological epoch which is not represented. As a result most excellent facilities are afforded for a study of the various geological horizons. Excursions to points of interest are made during the autumn and spring months.

Zoology and Botany

The Biological Laboratory furnishes adequate rooms, with the usual apparatus, for carrying on research in animal and plant morphology, embryology, and experimental zoology. For special investigations unusual apparatus will be obtained. It is expected that the ample grounds at "Homewood" will furnish facilities for experiments in breeding.

It is planned that, before receiving the degree of Doctor of Philosophy, each student shall have the opportunity to study marine and terrestrial life in some tropical region. For the spring and summer of 1910 a laboratory will probably be established in Jamaica, West Indies.

A collection of living plants in the botanical garden and conservatory, a physiological laboratory in the latter, and propagating grounds nearby are available for experimental work. A collection of carefully "fixed" and preserved alcoholic material of several hundred species of plants is available for histological and developmental study. The herbaria of the laboratory include the Schimper collection of European seed plants, the Field Club collection of local plants, the Fitzgerald collection of mosses, and smaller collections of fungi, marine algae, and Jamaican plants.

The library in the laboratory is supplemented by the main library of the university and other libraries in the city, including the excellent botanical library of John Donnell Smith, whose courtesy has always made his library and herbarium available for advanced students.

Prompt publication of abstracts of results is provided for in the University Circular. From time to time the results of extensive investigations in zoology are published by the University Press in a series of illustrated quarto monographs. The Adam T. Bruce Fellowship is awarded to men capable of carrying on research in biology. One of the graduate students in zoology may be appointed each year to occupy the University table at the marine laboratory of the U. S. Fisheries Bureau, at Woods Holl, Mass.

The laboratories are open from 9 a. m. to 5 p. m., and for necessary research in the evenings, but only by special permission.

ADVANCED COURSES

I. *Zoology*

Laboratory work in general zoology, morphology, and embryology is directed by Professor ANDREWS. The work in experimental zoology is directed by Professor JENNINGS. The student will receive such assistance and train-

ing as his individual needs seem to require. Work done in the laboratory is supplemented by work in the field and at the seashore.

Journal Club.—All the graduate students take part with the instructors in a weekly discussion of the current literature.

Seminary.—Professors ANDREWS and JENNINGS will meet the advanced students for discussion of some of the fundamental problems of zoology weekly from the beginning of the session until the Easter vacation.

Experimental Zoology.—Professor JENNINGS. *Three lectures a week, from the beginning of the session until February* 1.

During the year 1909-10 the course will deal with the experimental work on the problems of racial development—the processes of reproduction, variation, heredity, and evolution.

Conference on Experimental Investigations.—Professor JENNINGS. Those engaged in experimental investigations will form a club for the purpose of discussing subjects and methods of investigation, and for reporting on their own work and that of others on related subjects. *Weekly during the first half-year, or possibly throughout the year.*

A series of lectures will be given by investigators from other institutions. At present the following can be announced. Professor Davenport, of the Carnegie Institution, three lectures in February on "Heredity in Its Application to Animal and Plant Breeding and to Man;" Professor Morgan, of Columbia University, "The Modern Study of Heredity in Relation to the Soma Cells;" Professor Conklin, of Princeton University, "Some Problems in Experimental Embryology;" Professor Harrison, of Yale University, "The Development of the Nervous System;" Professor Kellicott, of the Woman's College, of Baltimore, "Growth and Correlation."

II. *Botany*

1. Journal Club and Seminary.

a. The Journal Club meets weekly through the year, in conjunction with the Zoological Journal Club.

b. The Botanical Seminary meets twice weekly, from December 1 to May 1. The seminary work of the year 1908-09 was devoted to a survey of recent work on the phylogeny of the Archegoniatae, based on Bower's "Origin of a Land Flora."

2. Lectures and Laboratory Work. Professor JOHNSON.

I. The Reproduction and Phylogeny of Plants.

a. *Three lectures weekly through the year.*

b. *Laboratory work associated with the lectures, twice weekly through the year.*

c. *Definite problems in field work assigned for study in the autumn and spring.*

II. The Histology and Physiology of Plants.

a. *Two lectures weekly from January* 1 *to June* 1.

b. *Laboratory work twice weekly from January* 1 *to June* 1.

III. The History of Botany.

Two lectures weekly from October 1 *to December* 20.

The following themes will be discussed in successive years: The Theory of Sex in Plants, The Cell Theory, Growth, Movement, and Nutrition in Plants.

UNDERGRADUATE COURSES

The collegiate courses in zoology and botany are known as Biology 1, Biology 2, Biology 3, and the Natural History Course.

Biology 1.

Six hours of laboratory work and three lectures or other exercises weekly, through the year. Professor ANDREWS and assistants.

This introductory course is open to all students and may be taken without previous training in chemistry or physics. It may be taken profitably by students interested in political economy, history, psychology, or ethics; it will be found useful to those looking forward to the ministry; and it is required of all who are to enter the medical school.

a. General Biology. *Till March* 15.

In the laboratory each student studies with the microscope, or dissects, selected animals and plants from the more simple such as amoeba and yeast to the more complex such as the fern and frog. In the lectures some of the fundamental facts of Biology are emphasized.

b. Embryology. *After March* 15.

Each student studies the cleavage of the living frog's egg and the formation and transformation of the tadpole. Subsequently he studies the hen's egg and the formation of organs in the embryo chick, learning to make his own serial sections, etc.

Biology 2.

Six hours of laboratory work and three lectures or other exercises weekly, through the year. Dr. COWLES.

This course continues the training of Biology 1 in limited fields, and is recommended to those who expect to study medicine, or to specialize in any department of Biology.

a. Comparative Anatomy of Vertebrates. *Till March* 15.

The student dissects the skate, shark, codfish, nectrus, turtle, alligator, pigeon, and dog. The lectures emphasize the principles of animal morphology.

b. Bacteriology. *After March* 15.

The student learns the methods of handling, cultivating and studying non-pathogenic bacteria. The practical work gives valuable training in careful laboratory methods. The lectures treat of bacteria from a biological point of view, as very important agents in natural processes.

Biology 3.

Six hours of laboratory work and three lectures or other exercises, weekly through the year.

a. Zoology. Professor ANDREWS and Dr. COWLES. [First half-year].

A comparative study of the chief groups of non-vertebrate animals. This may be made a whole course when botany is not needed.

b. Botany. Professor JOHNSON and an assistant. [Sec ond half-year].

The Structure and Function of Root, Stem, Leaf Flower, and Fruit.

This is a course for beginners, giving a general survey of th nature and activities of plants, the out-door work serving to giv students some familiarity with native plants in the field. Thi may be made a full course by those desiring it for general cu ture, or as a preparation for further work in botany or in fo estry.

Natural History.

Nine hours weekly, from February 1 *to the end of th session.* Professors ANDREWS and GRAVE, with assistants

This elementary course in Zoology and Botany is intended fo those having no training in these subjects and is chiefly a lab ratory course. It is required of students in groups I, II, III.

PHYSIOLOGY

Facilities are offered in the Physiological Laborator for special students, graduates in medicine and others who are interested in special lines of investigation, an also for those who wish to follow courses leading to th degree of Doctor of Philosophy in Physiology or allie subjects.

Regular courses of instruction are given as follows:

1. Advanced lectures. Professor HOWELL.

   Irregular intervals, through the year.

2. Journal Club. Professor HOWELL.

   Weekly, through the year.

3. Seminary. Professor HOWELL.

   Weekly, through the year.

4. Physiology of the Animal Body. Professor HOWELL Associate Professor DAWSON, and Assistants.

   Lectures, three hours weekly, through the year; laboratory, si hours weekly, first half-year.

   [The laboratory course may be repeated in the second half year.]

5. Advanced Laboratory Work. Professor HOWELL and Associate Professor DAWSON.

This work is done individually.

GREEK

GREEK SEMINARY

Professor GILDERSLEEVE will conduct the Greek Seminary, the plan of which is based upon the continuous study of some leading author or some special department of literature.

The Seminary consists of the Director, Fellows, and Scholars, and such advanced students as shall satisfy the Director of their fitness for an active participation in the work by an essay, a critical exercise, or some similar test of attainments and capacity. All graduate students, however, may have the privilege of attending the course.

During the next academic year the study of *Plato and the literary form of Greek Philosophy* will constitute the chief occupation of the members. There will be three meetings of the Seminary each week—two for the interpretation of the text in hand, one for cursory reading in Plato or conferences on kindred subjects.

It is important that all should be provided with the latest edition of Ritter and Preller's *Historia Philosophiae Graecae*. Zeller's Outlines of the History of Greek Philosophy (English or German, German being preferred), Ueberweg-Heinze's *Grundriss der Geschichte der Philosophie des Alterthums* and Gomperz' *Griechische Denker* are also recommended. A complete edition of the text of Plato is necessary (preferably Oxford edition by Burnet), and the student should also possess annotated editions of some of the principal dialogues, such as Apology (Riddell), Gorgias (Lodge's Deuschle-Cron), Meno (E. S. Thompson), Phaidon (Archer-Hind), Phaidros (Thompson), Republic (Adam), Symposion (Hug), Theaitetos (Campbell).

ADVANCED AND GRADUATE COURSES

1. Professor GILDERSLEEVE will also conduct a course of Practical Exercises in Greek, consisting chiefly in translation at dictation from Greek into English and English

into Greek, two meetings a week from the beginning of the session to the first of January.

2. He will hold a series of conferences on Greek Syntax, once a week, from the first of January to the end of the session.

3. He will give a course of lectures on Greek Epic Poetry, illustrated by readings, chiefly from Homer, once a week, from the first of January to the end of the session.

4. Associate Professor MILLER will direct the private reading of advanced students in Plato and Aristotle.

The schedule given above is subject to additions and modifications.

UNDERGRADUATE COURSES

1. Xenophon, *Memorabilia*. (selections).
   Plato, *Apology.*
   Herodotus (selections).
   Three hours weekly, first year. **Associate Professor MILLER.**

   Private Reading: Demosthenes (select orations); Aristophanes, *Clouds*.

5. Aeschylus, Sophocles, Euripides (one play each).

   Three hours weekly, through the year. Associate Professor SPIEKER.

Associate Professor SPIEKER offers, for beginners in Greek, a course of three or four hours weekly throughout the year. This course is intended primarily for the benefit of such graduate students of language as may feel the need of a knowledge of Greek in the prosecution of their work; but undergraduate students who have the ministry in view, and who have not had any previous training in Greek, may also be admitted. The class will be advanced as rapidly as is consistent with thoroughness of work.

LATIN

The most important organ of training is the Latin Seminary which meets twice a week throughout the year. It consists of the director, fellows, scholars, and such advanced students as shall give satisfactory proof of their ability and training. Any graduate student is at liberty to attend the Seminary exercises, but each regular member is required to take his turn in the work. Each year some author or group of authors in a given department of literature is made the centre of study. The subjects treated during the last three years are as follows:

1906-1907. The Roman Drama, especially Plautus and Terence.
1907-1908. The Roman Satire, especially Horace and Juvenal.
1908-1909. The Roman Historians, especially Livy and Tacitus.

In addition to the regular work of the Seminary, courses of lectures are given every year by the director and from time to time by other qualified persons.

During the academic year 1909-1910 the attention of the Seminary will be given to the Roman Epic, and the centre of this work will be the Aeneid of Vergil.

Students are requested to provide themselves in advance with complete texts of Catullus and Statius (Bibliotheca Classica Oxoniensis), of Vergil, Ovid, Lucan, and Claudian (Teubner), and of Valerius Flaccus (ed. Schenkl, Weidmann, Berlin, 1871). Copies should also be procured of Arndt's Schrifttafeln zur Erlernung der lateinischen Palæographie, 1tes Heft, 4te Auflage (Berlin Grote'sche Verlagsbuchhandlung, 1904).

ADVANCED AND GRADUATE COURSES

1. Throughout the year Professor Smith will lecture once a week on the Roman Epic from Naevius to Claudian.

2. During the first half-year he will lecture once a week on the historical development of the Hexameter.

3. During the second half-year he will lecture once a week upon selected topics in the development of Latin poetical syntax and style.

4. Professor Wilson will give a course of lectures and practical exercises in Latin Palæography once a week until March 1.

5. From March 1 until the end of the year he will lecture once a week on problems of Latin Pronunciation.

6. The advanced students will meet once a week throughout the year for the rapid reading of the epic poets.

This schedule is subject to additions and modifications.

UNDERGRADUATE COURSES

1. Livy (selections); Terence (one play); Catullus (selections).

Three hours weekly, through the year. Professor MUSTARD.

Private Reading: Cicero, *Cato Maior;* Plautus (one play).

Prose Composition.

Weekly, through the year. Professor MUSTARD.

2. Tacitus, *Annals* (selections); Horace, *Odes* and *Epodes.*

Three hours weekly, through the year. Professor MUSTARD.

Private Reading: Tacitus, *Germania;* Horace, *Satires* and *Epistles* (selections).

Prose Composition: exercises from time to time.

3. Lucretius (selections); Vergil, *Georgics.*

Two hours weekly, through the year. Professor MUSTARD.

Private Reading: Cicero, *First Tusculan;* Quintilian (book x).

Roman Literature (with reading of selected passages).

Weekly, through the year. Professor SMITH.

4. Juvenal (selections); Petronius (selections); Apuleius (selections).

Two hours weekly, through the year. Professor WILSON.

Private Reading: Martial (selections); Pliny, *Letters* (selections); Roman Elegy (selections).

Roman Life: lectures and conferences.

Weekly, through the year. Professor WILSON.

5. Ovid, *Metamorphoses:* readings and conferences; Seneca, *Medea:* study of the principles of Roman Rhetoric and Literary Criticism.

Three hours weekly, through the year. Professor SMITH.

6. Advanced Latin Composition.

Weekly, through the year. Professor MUSTARD.

NOTE.—Courses 2, 3, and 4 may be taken only by those who have pursued the courses preceding them. Course 5 may be taken concurrently with Course 4.

Roman Literature (Course 3) and Roman Life (Course 4), each one hour weekly, are open to all students and taken together are counted as half a course.

Classical Archaeology and Art

The work in Classical Archæology and Art is carried on by means of a seminary, various courses of lectures, and practical exercises in the museums. The archæological material in the possession of the university includes good collections of Greek and Roman inscriptions, marbles, bronzes, vases and other terracottas, coins, gems, etc., which not only serve the purpose of illustration, but also form the basis of original investigation. These are supplemented by squeezes, photographs, and lantern slides, as well as by the casts belonging to the university and to the Peabody Institute. The new Walters Gallery, which is not far from the university, contains a very valuable collection of Greek and Roman antiquities.

SEMINARY AND ADVANCED COURSES

The subjects treated in the seminary, or presented in lectures, vary from year to year, so that in three or four years of continuous residence students are brought into contact with the principal fields of archæological research. These subjects include Greek and Roman architecture, epigraphy, topography, sculpture, coins, gems, bronzes, and terracottas, Mycenæan civilization, Greek vase painting, and Latin Palæography. The following courses are offered in the year 1909-10.

1. Archæological Seminary. Ancient Roman Coinage, with especial reference to the Spanish colonial series. Professor Wilson.

Two hours weekly, through the year.

Note.—The coin cabinets of the university contain more than five thousand specimens, many of which were brought together years ago by Professor Helbig. This nucleus has lately been increased by the gift of more than three thousand gold, silver and bronze coins from Spain, which were collected by a Spanish nobleman during the last forty years. A part of this material is still unpublished.

2. The Topography and Monuments of Rome, with especial reference to the imperial *Fora* and the development of the city in the *Campus Martius*. Professor WILSON.

Weekly, through the year.

3. Latin Palæography: lectures and practical exercises on facsimiles of manuscripts. Professor WILSON.

Weekly, until March 1.

4. Archæological Journal Club, in which the students will meet at stated intervals to read, report, and discuss the current literature of the subject. Professor WILSON.

Professor Wilson will give also a course of lectures on problems in Latin pronunciation, as announced under the head of Latin.

Associate Professor D. M. Robinson will spend the year 1909-10 in the American School of Classical Studies at Athens as Professor of the Greek Language and Literature. During his absence no regular lectures will be given in Greek Archæology and Art, but suitable provision will be made for the guidance of advanced students in their reading and for the conduct of the undergraduate courses mentioned below.

UNDERGRADUATE COURSES

1. Outlines of Classical Archæology; lectures and conferences. Professor WILSON.

Three hours weekly, through the year.

This course is intended to furnish a rapid survey of the principal fields of Greek, Etruscan and Roman archæology and art. Knowledge of Latin and Greek is not required.

2. The Private Life of the Romans. Professor WILSON.

Weekly, through the year.

3. The Private Life of the Greeks.

Weekly, through the year.

Courses 2 and 3 are parts of Latin 4 and Greek 4, respectively, but may be pursued by any student of the University. Taken together they count as half a course, and with the course in Roman Literature (Latin 3) as a full course.

Sanskrit and Comparative Philology

Courses of instruction, directed by Professor Bloomfield, with the assistance of the Fellow or the Scholar in Sanskrit, are provided in the Indo-Iranian languages (Vedic and Classical Sanskrit, Pāli and Prākrit, Avestan and Old Persian), in Comparative Grammar of the Indo-European languages, in historical Ethnology of the Indo-European peoples, and in general Linguistic Science. During recent sessions courses in the Lithuanian language and literature were given; these also will continue to form a regular feature of the work of the university.

These courses aim to meet the wants of those who wish to devote themselves to the study of these branches exclusively and for their own sake, *i. e.*, those who wish to become specialists in Sanskrit Philology or Comparative Philology; and also the wants of students of languages in general, who wish to obtain a broader linguistic basis for special studies in other departments of philology.

The advanced work aims especially to meet the wants of those who wish to make Indian Philology or Comparative Philology their special study. This work centres in the Sanskrit Seminary and not infrequently involves the use of Sanskrit manuscripts.

A prolonged course in Sanskrit, involving two lectures a week during two years and attendance in the Sanskrit Seminary for a half-year (one hour a week), is planned, so as to furnish a good knowledge of Classical Sanskrit and to include an introduction into the dialect of the Vedas. This amount of work represents material sufficient for the first subsidiary subject for the degree of Doctor of Philosophy. A course in the same study for one and a half years, involving two hours a week, is the amount required for a second subsidiary subject leading to the same degree.

A synopsis of the courses offered during past years may be presented under the following heads:

I. Courses in the general principles of comparative philology or linguistic science, and on special chapters thereof; lectures on ethnology and the history of religions.

II. Courses in the general comparative grammar of the Indo-European languages; comparative grammar of Sanskrit and Avestan; comparative study of Indo-European accentuation; comparative study of Greek, Latin, Sanskrit, and Teutonic, including vocalism, consonantism, noun-formation, and inflections.

III. The Vedic, Sanskrit, and Prākrit dialects; Rig-Veda; Atharva-Veda; literature of the Brāhmanas and Upanisads. The law books of Manu and Yājñavalkya; the Drama Çakuntalā and introduction into Prākrit; Hitopadeça, Kathāsaritsāgara, and Nala. Sanskrit grammar and prose composition.

IV. The Pāli language and Buddhist literature.

V. The Avestan language and the sacred books of the Avesta.

VI. The Lithuanian language and literature.

The following courses, in charge of Professor Bloomfield, will be given during the session of 1909-1910:

A. *Linguistic Science and Comparative Grammar of the Indo-European Languages.*

1. The elements of Linguistic Science, with an account of the Ethnology and Religions of the Indo-European peoples. *Weekly, through the year.*

2. Comparative grammar of the more familiar Indo-European languages (Greek, Latin, German, and Sanskrit): The principles and history of noun formation. *Weekly, through the year.*

B. *Indo-Aryan Philology.*

3. Vedic Seminary: The literature of the Atharva-Veda. *Weekly, through the year.*

4. The elements of Vedic philology: Vedic grammar, metres, and interpretation of selected hymns of the Rig-Veda. *Weekly, second half-year.*

5. The drama Çakuntalā, together with an introduction to the study of Prākrit. *Weekly, through the year,*

6. Beginners' course in Sanskrit: grammar (Whitney's Sanskrit Grammar) and interpretation of an easy text (Lanman's Reader). *Twice weekly, through the year.*

7. Selections from the Hitopadeça and the Law-Book of Manu (second year's course in Classical Sanskrit). *Twice weekly, first half-year.*

C. *Other Indo-European Languages.*

8. Introduction to the Lithuanian Language and Literature. *Weekly, through the year.*

NOTE.—No knowledge of Sanskrit is presupposed for courses 1, 2, 6 and 8. Course 1 sketches briefly the history of the Science of Language; presents a systematic account of the ethnology and religions of the Indo-European peoples; deals with the principles that govern the life and growth of language, and finally treats of the origin of language. Course 2 is intended as an elementary introduction into the methods and results of the Comparative Grammar of the more important Indo-European languages.

ORIENTAL SEMINARY

The various courses are adapted to the requirements of four classes of students, namely: (*a*) students of theology wishing to obtain a thorough acquaintance with the sacred tongue and its sister idioms as a means of elucidating Scripture and problems of the comparative history of religion; (*b*) students of linguistics intending to make comparative grammar of the Semitic languages their specialty; (*c*) students of Oriental history and archæology desirous of drawing directly from the original sources; (*d*) persons looking for instruction in the living Oriental languages (as modern Arabic, Turkish, Persian, Amharic, Malay, Tagalog, etc.) for practical purposes.

A room has been set apart containing a well-equipped working library for all the branches of Oriental research (including the library of the late Professor A. Dillmann, of Berlin, the Leopold Strouse Semitic Library, a special

collection of works on Philippine dialects, etc.), and some advanced students are usually present to help in the preparation for the recitations conducted by the Director of the Seminary, and to furnish any other aid that may be desired. Near the Dillmann Library, on the same floor, are some archæological and antiquarian collections, including the Cohen Collection of Egyptian Antiquities, the Sonneborn Collection of Jewish Ceremonial Objects, collections of Hebrew and other Oriental manuscripts, Babylonian seal-cylinders and clay tablets, etc.

The following courses are offered for the academic year, 1909-10:

GRADUATE COURSES

In the graduate courses the subject of English is studied with reference to the historical and technical aspects of linguistic and literary science. The usual sequence of courses enables a student, in three or four years, to study with precision the important departments of grammar and of literature, and to become trained in the processes of original investigation. Instruction is imparted by lectures, by freer conferences, by the methods of the Seminary, and by class-room recitation. A Journal Club is conducted for the purpose of supplementing the regular courses with reports of the current work of scholars.

1. *English Seminary*

Graduate students are admitted to the Seminary as soon as they have satisfied initial requirements for independent research.

In the academic year 1909-10, the Seminary will be engaged in the study and investigation of the following subjects:

(*a*) *Beowulf,* and the doctrine of Epic Poetry. *From October to January.*

(*b*) The Poetry of Byron and Shelley. *From January to the end of the year.* The Seminary will be conducted by Professor Bright. *Tuesday and Thursday,* 3-5 *p. m.*

2. Lectures on Historical Grammar, Versification, and Literary Criticism. Professor Bright. *Monday,* 11 *a. m.*

3. Interpretation of selected texts. Professor Bright. *Tuesday and Thursday,* 12 *m.*

4. The Journal Club of the English Seminary. Professor Bright. *Alternate Fridays,* 3-5 *p. m.*

5. English Literature. (Third Year of Group II).

First half-year: The Caroline and "classical" periods of English Literature, 1625 to 1770.

Second half-year: The period of the romantic reaction in English Literature, 1770 to recent times.

Three hours weekly, through the year. Professor BROWNE.

6. English. (Fourth Year of Group II).

First half-year: Anglo-Saxon.

Second half-year: Middle English and Early Scottish Poets.

Three hours weekly, through the year. Professors BRIGHT and BROWNE.

GERMAN

Under this head are included German Language and Literature and subjects in the wider field of Germanic Philology. Regular instruction, through seminary and lectures, is given in German Literature and in Gothic, Comparative German Grammar, Old High German, and Middle High German; while occasional courses are offered in Old Norse, Old Saxon, and Old Frisian.

ADVANCED COURSES

Seminary

The library of the German Seminary, to which all advanced students have the fullest access, is open, Mondays to Fridays, from 9 a. m. to 5 p. m., and Saturdays from 9 a. m. to 1 p. m. The Seminary treats, in successive half-years, some theme from the period of German Classicism or Romanticism, and a subject from the literature of Middle High German. During the year 1909-10 the Seminary will meet three times weekly. The subject for the first half-year will be Goethe's *Faust*. In the study of the First Part, beginning with the Urfaust, the questions of conception and composition of the drama will be considered, in chronological order, from the point of view of Goethe's mind and art. The Second Part will be inter-

Three hours weekly, through the year. Professors BRIGHT and BROWNE.

GERMAN

Under this head are included German Language and Literature and subjects in the wider field of Germanic Philology. Regular instruction, through seminary and lectures, is given in German Literature and in Gothic, Comparative German Grammar, Old High German, and Middle High German; while occasional courses are offered in Old Norse, Old Saxon, and Old Frisian.

ADVANCED COURSES

Seminary

The library of the German Seminary, to which all advanced students have the fullest access, is open, Mondays to Fridays, from 9 a. m. to 5 p. m., and Saturdays from 9 a. m. to 1 p. m. The Seminary treats, in successive half-years, some theme from the period of German Classicism or Romanticism, and a subject from the literature of Middle High German. During the year 1909-10 the Seminary will meet three times weekly. The subject for the first half-year will be Goethe's *Faust*. In the study of the First Part, beginning with the Urfaust, the questions of conception and composition of the drama will be considered, in chronological order, from the point of view of Goethe's mind and art. The Second Part will be inter-

preted in selected portions, and Goethe's draft of particular scenes and of the uncompleted plot will be examined, together with the Paralipomena. During the second half-year the *Parzival* of Wolfram von Eschenbach will be studied. The introduction, the third, fifth, ninth and twelfth books, with other selected passages, will be read, and the general question of Wolfram's relation to his literary sources discussed. Particular attention will be paid to the epic style in *Parzival,* as compared with the other representative Courtly Epics, and with *Titurel* and *Willehalm.* The Seminary will be conducted by Professor Wood.

Students are requested to procure Goethe's *Faust,* the First Part, edited by Calvin Thomas, Second Edition, Boston, 1898; Goethe's *Faust in ursprünglicher Gestalt,* hrsg. von E. Schmidt. 5. Abdruck, Weimar 1902; Fr. Strehlke, *Paralipomena zu Goethe's Faust,* Stuttgart, 1891; *Wolframs von Eschenbach Parzival und Titurel,* hrsg. von Ernst Martin. Erster Teil: Text, Halle, 1900; Zweiter Teil: Kommentar, Halle, 1903.

Germanic Society

The Germanic Society, which includes as members all the instructors and advanced students in German, meets fortnightly. Before it are presented not only reports on articles in current journals, but also successive results of studies by the members. The chief object of the Society is to foster and guide the aptitude for more sustained individual investigation than the collective work of the Seminary offers scope for.

Lectures

1. Gothic and the Elements of Comparative Germanic Grammar.

Professor COLLITZ. *Two hours weekly, through the year.*

Students are requested to procure Braune's *Gotische Grammatik,* 6. Auflage, Halle, 1905.

2. Old Low German.

Professor COLLITZ. *Weekly, through the year.*

Students should procure Holthausen's *Altsächsisches Elementarbuch,* Heidelberg, 1899.

3. Old High German. (Continued).

Professor COLLITZ. *Weekly, first half-year.*

4. Middle High German: Introductory Course.

Professor COLLITZ. *Two hours weekly, through the year.*

Students should be provided with Paul's *Mittelhochdeutsche Grammatik*, 5. Auflage, Halle, 1904, and Bachmann's *Mittelhochdeutsches Lesebuch*, 3. Auflage, Zürich, 1904.

5. History of German Literature in the Eighteenth Century.

Professor WOOD. *Two hours weekly, first half-year.*

After a review of the Second Silesian literary movement, the critical reforms at the close of the seventeenth century will be considered in detail, after which a series of representative eighteenth century works will be read, extending to the publication of Goethe's *Götz von Berlichingen* (1773). The movements will be studied from the point of view of literary form, and the attempt will be made to characterize the various representative forms as nationally German, or as adaptations from foreign sources, or as a mixture of both.

6. Goethe's Later Dramas.

Professor WOOD. *Twice weekly, first half-year.*

Goethe's plays, with typical characters, beginning with the period of the French Revolution (*Natürliche Tochter, Fragment eines Trauerspiels, Pandora, etc.*) will be studied, as representing a distinct development in the poet's art and in his dramatic theory.

7. *Simplicissimus* and the German Romance of the Seventeenth Century.

Professor WOOD. *Twice weekly, second half-year.*

8. History of the German Novel in the Eighteenth Century.

Dr. ROULSTON. *Weekly, through the year.*

Special Courses

1. Scientific German. Dr. KURRELMEYER.

Two hours weekly, through the year.

2. Historical German. Dr. ROULSTON.

Two hours weekly, through the year.

3. German Conversation. Mr. HOFMANN.

Weekly, through the year.

NOTE.—Classes 1 and 2 are for graduates who lack the ability to read German at sight.

German Conversation.

Weekly, through the year. Mr. HOFFMAN.

ROMANCE LANGUAGES

The department of Romance Languages offers facilities for work in manuscript sources and palæography, in literature (old and modern), in language (phonetics, morphology, history, syntax, dialects), and in Popular Latin. For students who desire the degree of Doctor of Philosophy, three years are usually required (in the principal subject), under the direction of the various professors in the department. The work is confined almost entirely to the three principal Romance languages (French, Spanish, and Italian), in the literatures and languages of which special attention is paid to the origins.

Instruction is given in lectures and regular class exercises, the former being supplemented by subjects for special investigation assigned to the student. For each of the languages noted above, a seminary meeting is held once a week. In French the seminary for the old literature alternates with that for the modern literature. A meeting of the Romance Club is also held weekly, when original papers are read and reviews of recent journals

presented. The subjects for work during the academic year 1909-10 are as follows:

History

Facilities for research are offered in the principal fields of history. Special attention is given to methods of investigation and each advanced student comes under the personal direction of the instructors in his chosen field. This supervision is obtained through seminary meetings and frequent private consultation.

In addition to the library of the university, students make use of the admirable collections of source material in the Peabody Library and the Maryland Historical Society, and are in constant touch with the great resources of the Library of Congress and the departments in Washington.

GRADUATE COURSES

European History. The courses in European history direct attention to the social, economic, and constitutional development of European peoples. The subjects follow in consecutive order, the topics for each year forming a complete and independent group. The series requires three years for completion and offers opportunities for close study of selected portions of the mediæval and early modern history of the Continent. Every third year a course on non-American contemporary history is given, particularly since 1871, for the purpose of arousing interest in the historical aspects of recent events and of showing some of the characteristics of modern political, social, and economic life in other countries than America. A weekly seminary is held for the study of problems in European history and institutions.

Courses in Latin palæography and in French palæography are given in their respective departments.

English History. The course in English constitutional history extends over a period of three years, tracing the origin and growth of the English constitution from earli-

est times to the present century. The treatment allows for the consideration of closely allied institutional and economic aspects of the subject. A separate course on the historical development of English common and statute law is also given. A weekly seminary is held for the study of texts and the examination of problems raised in the lectures. Special attention is paid to collections of documentary material.

American History. The courses in American history begin with the history of British colonization in America and deal with the constitutional and economic growth of the colonies, and the constitutional and political history of the United States after 1783. A weekly seminary is held for research in special subjects in American history.

Ancient History. The constitutional history of Greece and Rome is supplemented by lectures on the Roman Law. Certain portions of Oriental History are treated in the departments of Semitics and Sanskrit.

Special Lectures. The Albert Shaw Lectures on Diplomatic History are given annually by investigators in selected fields of American and foreign relations. The scope of the lectures is not confined to the United States, but lectures on European diplomatic history will also find their due place.

The James Schouler Lectures on History and Political Science are given annually by lecturers of prominence, upon topics indicated in the title of the lectureship. These lectures are open to the public as well as to the students and members of the University. The course for 1909 was given by Dr. Abbott Lawrence Lowell, President of Harvard University, and it is expected that the lecturer for 1910 will be George Walter Prothero, Litt. Doc., formerly professor of history in the University of Edinburgh, now editor of the *Quarterly Review* and Honorary Fellow of Queen's College, Cambridge.

Baron Serge Korff, Professor of Public Law in the University of Finland, will give a departmental course of lectures in the spring of 1910 on Modern Russian History and Law.

Other lectures of interest to the students of this department, either open to the public or designed for class instruction, are given from time to time by distinguished scholars outside the University. These lectures are, in part, provided for from the income of the fund bequeathed by the late Professor Herbert B. Adams.

Historical and Political Science Association. This monthly meeting of the instructors and students of the departments of History, Political Economy, and Political Science affords an opportunity to hear addresses from prominent specialists, to consider important movements and undertakings, and to present critical reviews of recent publications in the fields of history, political economy, and political science.

For the year 1909-10 the courses will be as follows:

Professor VINCENT.

1. Europe. French Revolution.
   Two hours weekly, first half-year.
2. Europe. Nineteenth Century to 1848.
   Two hours weekly, second half-year.
3. Seminary in European History.
   Two hours, alternate weeks.

Professor ANDREWS.

1. Constitutional History of England, 1688-1900.
   Two hours weekly, through the year.
2. Modern European History, 1871-1909.
   One hour weekly, through the year.
3. Seminary in English History.
   Two hours, alternate weeks.

Associate Professor BALLAGH.

1. History of the United States, 1789-1860.
   Two hours weekly, through the year.
2. Seminary in American History.
   Two hours, alternate weeks.

Dr. STEINER.

History of English Law.

One hour weekly, through the year.

Dr. MAGOFFIN.

1. History of Greece to 338 B. C.

One hour weekly, through the year.

2. History of Rome and Italy to 133 B. C.

One hour weekly, through the year.

UNDERGRADUATE COURSES

1. History of Greece and Rome.

The political and constitutional history of Greece and Rome, approached through the translated texts of Herodotus, Thucydides, Suetonius, Tacitus, and others, with the aid of modern authorities.

Three hours weekly, through the year. Dr. MAGOFFIN.

2. European History (General History).

From the decline of the Roman Empire to the nineteenth century, dealing with the Romano-Barbarian kingdoms, the empire of Charles the Great, feudalism, the crusades, empire and papacy, renaissance, the Protestant revolution, the religious wars, eighteenth century states and the doctrine of the balance of power, the French Revolution, the Napoleonic period, and the reorganization of Europe in the nineteenth century.

Three hours weekly, through the year. Professor C. M. ANDREWS.

3. English History.

Chiefly constitutional and political, dealing with the origins and development of parliamentary institutions, the relations of England with continental Europe, and the modern expansion of the British Empire. Open to students who have had, or are taking, History 2 or Political Economy 1.

Three hours weekly, through the year. Professor VINCENT.

4. American History.

Colonial history and institutions, the formation of the Union, the development of constitutional government and law, the growth of foreign policy, the expansion of the nation. Emphasis will be laid on the national period, and the subject will be brought to the close of the nineteenth century. Open to students who have had History 2 and 3 or Political Economy 1.

Three hours weekly, through the year. Associate Professor BALLAGH.

The History courses begin in the second year of the college work. Students in Group III will at that time begin with course 1, and in the third year will be expected to take both 2 and 3. Course 4 completes the plan of instruction in History, and students of Group III who have had courses 2 and 3 are advised to take this in the fourth year.

Political Economy

GRADUATE COURSES

The graduate instruction in Political Economy is designed primarily to meet the needs of advanced students preparing for a professional career in economic science. The courses afford systematic instruction in general economic principles, intimate acquaintance with special fields of economic activity, and, most important of all, knowledge of and ability to employ sound methods of economic research. The work centres in the Economic Seminary, the membership of which is limited to the most advanced students, and the primary design of which is to develop scientific research in economic study and investigation.

Formal graduate instruction is offered in Economic Theory and in Applied Economics, by parallel courses of lectures throughout the year. The particular topics treated vary from year to year. In 1907-08 Professor Hollander lectured two hours weekly on the development of economic doctrines since Adam Smith, and two hours weekly on American commonwealth finance. During the year 1908-09 attention was given, in the course on economic theory, to economic thought before Adam Smith. In the course on applied economics, careful study was made of the theory and practice of exchange. Dr. Barnett lectured during the first half-year on the historical development of statistics, and during the second half-year on methods of statistical investigation. Special courses of lectures were given during the year by Mr. John M. Glenn, Director of the Russell Sage Foundation, on "Problems of Relief"; by Mr. Logan G. McPherson, of New York, on "Railway Transportation"; by Professor Winthrop M. Daniels, of Princeton University, on "The Nature of Competition"; by Professor Carl C. Plehn, of

the University of California, on "State Taxation in the United States."

The courses offered for 1909-10 are as follows:

1. The Economic Seminary.

Professor HOLLANDER and Associate Professor BARNETT. *Two hours weekly, through the year.*

The work of the year will continue to be a systematic study of the history, structure, and activities of labor organizations in the United States.

2. Economic Theory.

Professor HOLLANDER. *Two hours weekly, through the year.*

During the first half-year careful study will be made of the economic system of David Ricardo. During the second half-year attention will be given to tne doctrines of the French Economists.

3. Applied Economics.

Professor HOLLANDER. *Two hours weekly, through the year.*

During the first half-year the history of taxation will be traced. During the second half-year recent fiscal experiments in the United States will be examined.

4. Labor Legislation.

Associate Professor BARNETT. *One hour weekly, through the year.*

During the first half-year, the development of factory legislation and systems of workingmen's insurance will be considered. During the second half-year, the legal position of trade unions will be treated.

Special courses of lectures will be given by non-resident lecturers upon such practical economic problems as charities and correction, railway transportation, industrial organization.

A reading class is organized yearly by the more advanced students of the department for the co-operative study of economic texts and for the critical discussion of current economic literature.

In co-operation with the departments of history and political science, opportunity is offered in the Historical and Political Science Association for the presentation and discussion of original papers in economic science by instructors and invited speakers, and for the review by students of current publications of importance in these fields.

UNDERGRADUATE COURSES

1. (*a*) Economic History.

The economic development of England from the tenth century to the present time and the most important experiences of the United States are studied.

Three hours weekly, first half-year. Associate Professor BARNETT.

(*b*) Elements of Economics.

Particular attention is given to the theory of distribution and its application to leading economic problems.

Three hours weekly, second half-year. Associate Professor BARNETT.

2. (*a*) Finance.

The theory and practice of finance are considered, with particular reference to problems of taxation as presented in the experience of the United States.

Three hours weekly, first half-year. Professor HOLLANDER.

(*b*) Money and Banking.

The principles of monetary science are taught with reference to practical conditions in modern systems of currency, banking, and credit.

Three hours weekly, second half-year. Professor HOLLANDER.

3. (*a*) Statistical Methods.

After a preliminary study of the value and place of statistics as an instrument of investigation, attention is directed to the chief methods used in statistical inquiry.

Three hours weekly, first half-year. Associate Professor BARNETT.

(*b*) Economic Institutions.

Labor unions, corporations, and trusts are studied primarily as elements in the organization of industry.

Three hours weekly, second half-year. Associate Professor BARNETT.

Note. Course 2 is open only to such students as have completed course 1; and, save under exceptional circumstances, course 3 only to students who have completed 1 and 2.

Political Science

Graduate Courses

The graduate work in Political Science has for its aim the preparation of advanced students for professional and original work in the fields of Constitutional Law, International Law and Diplomacy, and Political Philosophy. It seeks also to supply the necessary training for those desiring to enter the higher branches of the public service, and to furnish a broad and philosophical equipment to those who expect later to pursue the study and practice of the law.

Seminary

In addition to the Historical and Political Science Association, at which the students of the departments of History, Economics, and Political Science meet jointly for the presentation of papers by the instructors and by invited speakers, a fortnightly Seminary is conducted by Professor Willoughby, at which reports upon special subjects are read by the students and discussed.

Journal Club

A weekly meeting of the advanced students, under the direction of Professor Willoughby, is held for the discussion of current political literature—books and periodicals.

Lectures

The lectures are so arranged as to give three or more years of continuous instruction, covering the following subjects: The Theory of the State (being a general introduction to the study of Constitutional and International Law), Foreign Constitutional Law, United States Constitutional Law, the Legal Aspects of Economic and Industrial Problems, the History of Political Theories and of Political Literature, and Historical Jurisprudence.

During the year 1909-10 the following courses will be given:

1 United States Constitutional Law. Professor WILLOUGHBY.

Two hours weekly, through the year.

The lectures extend over three years. In this course, the first of the series, the general nature of the American constitutional system, the relations between the Federal and State Governments, and between the States will be discussed.

2. Political Theories and Political Literature in England since 1688. Professor WILLOUGHBY.

One hour weekly, first half-year.

3. Political Theories and Political Literature in France since 1750. Professor WILLOUGHBY.

One hour weekly, second half-year.

4. Historical Development of the English Law. Dr. STEINER.

One hour weekly, through the year.

This course is a continuation of the one given in 1908-09, and will deal with the development of the substantive principle of the Common Law.

5. Dr. Dodd will give a course of lectures dealing with Municipal Government.

Undergraduate instruction in Political Science is given in the departments of History and Economics.

PHILOSOPHY AND PSYCHOLOGY

GRADUATE COURSES

The graduate work of the department takes different directions according as the chief interest of the student lies in the field of Philosophy proper, in Experimental and Comparative Psychology, or in Education. In each great subject the work is planned to cover three years. The arrangement by years is mainly for convenience; it is not of the nature of a curriculum. The courses are offered

to stimulate the student in the work of investigation. Whether, or when, the student shall take the degree of Doctor of Philosophy depends upon his success in the prosecution of a piece of research.

In Philosophy proper, the first year offers courses in General Psychology, Social Psychology and Philosophy, Theory of Evolution, and Genetic Psychology—these topics being the necessary foundation for the more detailed work of later years. In Psychology, a training course in Experimental and Comparative Psychology is added. Students specializing in Education take courses in the different branches of Psychology, in Evolution, and in the History of Philosophy and of Education.

In the second year, more special work of research is carried on. In Philosophy, the Theory of Knowledge becomes the central topic; History of Philosophy and Ethics are given; and a variety of special topics is presented. Under Psychology, the research courses in the laboratory are central, the Theory of Knowledge is associated with it, and again a variety of special topics allows choice of subjects allied to the main problem of the particular student. With Education,—Psychology, Philosophy, and Ethics are always associated.

In the third year, the seminary and laboratory courses are the centre of all the work done, the student being expected to give most of his time to the topic of his dissertation. The professors devote themselves to the direction of the student's investigation.

I. Graduate Conference. A conference composed of all the instructors and advanced students meets once a week. Papers are read, and reports on the progress of work, reviews of books, etc., are presented for general information and criticism.

II. Theory of Experience. Seminary course on the more logical and philosophical aspects of knowledge in its

relation to experience as a whole, summarizing the theory of Genetic Logic.

Professor BUCHNER and Dr. FURRY. *Two hours a week, through the year.*

III. *a.* Aspects of the Pragmatic Movement of Modern Philosophy.

Professor JOHN DEWEY (of Columbia University). *Six lectures, beginning January* 31.

b. Present Problems in Metaphysics and the Theory of Knowledge.

Professor JAMES H. TUFTS (of the University of Chicago). *Ten lectures, beginning March* 10.

IV. The Philosophy of Kant: The Critique of Pure Reason (Max Müller's translation), the Critique of Practical Reason (Abbott's Kant's Ethics).

Professor GRIFFIN. *One hour a week, through the year.*

V. English Ethics from Price to Spencer.

Professor GRIFFIN. *One hour a week through the year.*

VI. History of Educational Theory (Seminary Course).

Professor BUCHNER. *Two hours a week through the year.*

VII. Hegel and the Hegelians.

Professor BUCHNER. *One hour a week, through the year.*

VIII. Readings in German Philosophy: Hegel's *Phänomenologie des Geistes.*

Professor BUCHNER. *One hour a week through the year.*

IX. Educational Psychology.

Professor BUCHNER. *One hour a week, through the year.*

X. Introduction to Experimental and Comparative Psychology.

Professor WATSON and Dr. DUNLAP. *Lectures and laboratory exercises, Monday, Tuesday, and Wednesday, 2 to 4 p. m.*

This course, consisting of lectures, demonstrations, and laboratory exercises, is designed to serve both as a training course and as a general introduction to the problems and methods of experimental and comparative psychology.

XI. Experimental Psychology. Advanced course, designed to afford students further training in experimental technique; research problems to be assigned early in the course.

Professor WATSON and Dr. DUNLAP. *Two hours a week, through the year (laboratory hours to be arranged).*

XII. Comparative Psychology. Research course, covering the field of animal behavior. Research problems assigned to individuals.

Professor WATSON and Dr. DUNLAP. *Two hours a week, through the year (laboratory hours to be arranged).*

XIII. Theory of Color Vision.

Dr. C. L. FRANKLIN. *One hour a week, first half-year.*

XIV. Symbolic Logic.

Dr. C. L. FRANKLIN. *One hour a week, second half-year.*

XV. The Psychology of Space and Time Perception.

Dr. DUNLAP. *Two hours a week, first half-year.*

XVI. Attention and Feeling from the Experimental Standpoint.

Dr. DUNLAP. *Two hours a week, second half-year.*

XVII. Introduction to Genetic Logic, with emphasis on the Semblant Mode of Construction as basis of Aesthetics.

Dr. FURRY. *One hour a week, first half-year.*

XVIII. Representative Systems of Aesthetics.

Dr. FURRY. *One hour a week, second half-year.*

UNDERGRADUATE COURSES

1. *a.* Deductive and Inductive Logic.

Creighton's Introductory Logic is used as a text-book, with references to the works of Jevons, Mill, Bain, Keynes, and other writers.

Professor GRIFFIN. *Three hours weekly, until Christmas.*

b. Psychology.

Text-books liable to change from year to year are made the basis of instruction, but the subject is presented largely through informal lectures and discussions, and by means of passages in various authors assigned for reading. A series of lectures and demonstrations on physiological and experimental psychology is included in the course. One essay on an assigned subject is required from each member of the class.

Professor WATSON. *Four hours weekly, January to April.*

c. Ethics.

The subject is taught by lectures, recitations from a text-book—Mackenzie's Manual of Ethics being used at present,—and references to the works of the most important writers.

Professor GRIFFIN. *Three hours weekly, after April* 1.

2. Outlines of the History of Philosophy.

Rogers's Student's History of Philosophy, Weber's History of Philosophy, and other works of reference, are used as the basis of lectures, discussions, and recitations.

Professor GRIFFIN. *Two hours weekly, through the year.*

A third hour, for readings from the works of leading philosophers, may be taken.

All candidates for the degree of Bachelor of Arts are required to follow course 1 during the last year of residence.

DRAWING

1. Freehand Drawing.

The instruction aims to impart such knowledge of the principles of drawing as shall best serve to educate the eye and train the hand. Students looking forward to teaching or to the study of medicine or biology will find this course of value in the illustration of lectures and laboratory work.

Three hours weekly, through the year. Mr. WHITEMAN.

2. Mechanical Drawing.

The work of this course is arranged to meet the requirements of students who intend to make a special study of engineering.

Three hours weekly, through the year. Mr. WHITEMAN.

PUBLIC SPEAKING AND DEBATE

A course in reading and platform speaking is required of undergraduate students in their second year. For the sake of convenience in instruction, the class is divided into several small sections, to each of which is devoted one hour a week. A course in debating, which involves the study of parliamentary law, the collection and arrangement of material, and frequent practice in debate under the direction of an instructor, is assigned to students in their third year. The work of the two years is counted as a half-course. During the fourth year opportunity for a more detailed study of the art of debate

and for practice in argumentative composition is open to those who desire it. Prize contests in public speaking and in debate are held annually, and one intercollegiate debate is, as a rule, undertaken each year.

Physical Training and Athletics

The authorities of the university, recognizing the importance of systematic physical exercise under suitable advice, have placed the gymnasium in charge of Dr. Ronald T. Abercrombie, and have put the work of this department on a parity with the work done in the regular courses of study.

A careful physical and medical examination is made of each undergraduate, and such exercises are prescribed as are best suited to his needs. During his first year of residence, he is required to follow the prescribed gymnasium course, which includes also his attendance on a course in hygiene. Regular class instruction is given every afternoon from five to six o'clock. The use of the gymnasium is optional in the case of graduate students; it is offered to all members of the university upon payment of the ordinary locker fee.

The gymnasium—127 feet long by 35 feet wide—is provided with convenient lockers, baths, etc., as well as with the newest forms of apparatus. Adjoining the gymnasium proper is a "cage"—an enclosed and covered space for practice in running and in athletic sports—127 feet long, 66 feet wide, and 30 feet high.

"Hopkins Field," the athletic ground at Homewood, is now in use by the students. In its construction special attention was paid to the problem of drainage, and in this respect the field is well-nigh perfect. It is enclosed by one of the best quarter-mile cinder tracks in the country, with a 220-yard "straightaway." A club-house provides dressing rooms, lockers, and shower baths. A stand

THE DEGREE OF MASTER OF ARTS

The degree of Master of Arts is offered to students who have obtained the baccalaureate degree from a college of good standing, have then followed courses of university study under proper guidance for at least two years, and have satisfied the requirements mentioned below.*

The Board of University Studies reserves the right to decide in each case whether the preliminary training has been satisfactory, and, if any of the years of graduate work have been passed by the candidate away from this University, whether they may be considered as spent in accordance with these regulations.

At least one academic year must be passed in this University, and in every case this must be the one immediately preceding the final examinations, unless special permission to the contrary is granted by the Board of University Studies for some extraordinary reason.

The candidate for the degree must make formal application to the Board of University Studies at least one academic year before he expects to present himself for his final examinations. In this application he must state the subject which it is his intention to pursue as his principal study, and in his choice of additional subjects he must be guided by the advice of the professor in charge of his principal work.

In order to obtain the degree the candidate must satisfy two requirements:

1. He must prepare an essay upon a subject approved by the Board of University Studies. This must be completed and submitted to the Board at least four weeks before the time of the final examinations. Two referees will then be designated who shall present to the Board a

*It is understood that the University work for one of these years may be distributed through two or more years, in cases where the student can devote only a part of his time to study.

written report. This essay shall be prepared for presentation to the Board in the manner prescribed for the dissertations submitted for the degree of Doctor of Philosophy.

2. If the report on the essay is satisfactory, the candidate will then be admitted to the final written examinations.

The candidate is, however, permitted to take at the end of any academic year (or at the beginning of the next) examinations on the subjects followed during that year. In case these are passed in a satisfactory manner, he will not be examined further in them. Reports of these examinations shall be made to the Board of University Studies.

The names of the candidates found worthy of the degree will be submitted to the Board of Trustees, and with their approbation the degree will be publicly conferred.

THE DEGREE OF DOCTOR OF PHILOSOPHY

The degree of Doctor of Philosophy is offered to students who, after obtaining the baccalaureate degree from a college of good standing, have followed courses of university study under proper guidance and without serious distractions for at least three years, and have satisfied the requirements mentioned below.

The Board of University Studies reserves the right to decide in each case whether the preliminary training has been satisfactory, and which, if any, years of graduate work not spent in this University are to be considered as spent in accordance with these regulations.

At least one academic year must be passed in this University, and, except in extraordinary cases, the one preceding the final examinations.

PRINCIPAL AND SUBORDINATE SUBJECTS

To become a candidate for the degree the student must select a subject on which he intends to concentrate his efforts and must place himself under the guidance of the professor of this subject. This is called his "principal" study. With the advice of the professor and subject to the approval of the Board of University Studies, the student must choose two other studies, known as "subordinate" subjects, which he must follow. These are called the "first subordinate" and the "second subordinate," and the two should represent one year's work, two-thirds of this being devoted to the former. Additional information concerning the selection of these subjects is given on pages 225-232.

ACCEPTANCE OF THE CANDIDATE

A student who wishes to be considered a candidate for the degree must make written application to the Board of University Studies, upon a form provided for this purpose, at least one academic year before he expects to present himself for his final examinations.* Before this application can be accepted, he must satisfy the University examiners that he is able to translate at sight French and German journals and monographs relating to his principal subject.

REQUIREMENTS FOR THE DEGREE

Certain examinations, as outlined below, must be passed by the candidate, in order to obtain the degree; but the distinctive requirement is the presentation of evidence that the candidate has carried to successful completion an original investigation in his principal subject upon a theme approved by his chief professor. The results of this investigation must be embodied in a dissertation, and submitted to the Board of University Studies.

---

*A student who has been admitted as a candidate for the degree of Doctor of Philosophy, will be considered to have satisfied the requirements for admission to courses leading to the degree of Master of Arts.

REGULATIONS CONCERNING THE DISSERTATION

a. The dissertation must be prepared for presentation to the Board of University Studies in accordance with instructions to be obtained from the Registrar, and to every such dissertation must be appended a brief biographical sketch of the author. It must be submitted to the Board at least four weeks before the examinations in the principal subject.

b. The Board shall designate two or more referees, who shall make a written report on the dissertation.

REGULATIONS CONCERNING THE EXAMINATIONS†

a. The candidate shall be subjected to written examinations in his principal subject, and, whenever practicable, in both his subordinate subjects. The results of the examinations shall be reported in writing to the Board of University Studies; and, if these reports and the report on the dissertation are satisfactory, the candidate shall be admitted to an oral examination in his principal and first subordinate subjects before the Board, or a section of it.

b. The written examinations in the subordinate subjects may be taken at any time during the candidate's residence at the University, subject to the judgment of the examiners.

c. In the written examinations no session shall exceed five hours. In the oral examinations before the Board, the time allotted shall be one hour; and three-quarters of this shall be devoted to the principal subject.

OTHER REGULATIONS

Before the candidate is admitted to the oral examination he must signify his intention, in the event of his

†If a student who has absolved the examinations required for the degree of Master of Arts in this University, becomes a candidate for the degree of Doctor of Philosophy, he may, at the discretion of the professors, be excused from any further written examinations in the particular courses in which he has already passed.

receiving the degree, to print his dissertation in full or in part, and to satisfy the requirements specified below.

If the dissertation is not printed in full, an abstract must be prepared or a portion selected with the approval of the professor, which shall contain when printed not less than twenty-four octavo pages.

One hundred and fifty printed copies of the dissertation must be presented to the University within one year of the time when the degree is conferred. These must have the prescribed title page and must contain the biographical sketch.

The candidate is advised to have these printed copies ready for presentation before the date for the conferring of the degree; otherwise a deposit of $50.00 with the Treasurer of the University must be made. This deposit is returned when the printed copies are presented to the University. If these have not been received within the year specified, the Board of University Studies may declare the deposit forfeited and may apply the amount in printing the dissertation or a part of it.

CONFERRING OF THE DEGREE

The names of the candidates found worthy of the degree will be submitted to the Board of Trustees, and with their approbation the degree will be publicly conferred.

Choice of Subordinate Subjects

The following suggestions are not to be understood as limiting the attention of the student to the subjects directly connected with the requirements for the degree. In order to secure the full benefit of university training, it is often desirable to broaden the outlook through acquaintance with other subjects—especially those that are conterminous with the chosen field of study. It is also important to learn to appreciate the methods and to come under the influence of other personalities than those that dominate the student's special line of work.

In the choice of subordinate subjects to be associated with a principal one, considerable freedom is permitted

by the Board of University Studies. Certain combinations have been recognized officially in previous years, and others are admissible.

In the study of any principal subject the knowledge of a limited number of other subjects is, as a rule, essential. If, on entrance, the student is not sufficiently proficient in these, he must follow courses in this university which will give him the requisite knowledge. These courses need not, however, of necessity be offered as first and second subordinates.

In order to guide the student in his selection of subordinate studies, a number of statements are given below in tabular form, which apply to the various departments of study in this university. These statements furnish—

I. In case the student selects a given subject as his principal one—

a. A list of the other subjects an adequate knowledge of which is considered essential.

b. A list of subjects which, in the past, have been accepted as first or second subordinates in connection with the principal subject.

II. In case the student selects a given subject as his subordinate one—

A list of the courses in that department, which are ordinarily considered sufficient.

Mathematics

I. *a.* While no other subject can be said to be essential to the study of mathematics, it is very desirable that one taking up graduate work should have adequate knowledge of natural sciences, particularly of physics.

b. Physics, Geological Physics, Electricity, Astronomy, History of Philosophy, Psychology.

II. Two or more of the following: Elementary Differential Equations, Theory of Functions, Vector Analysis, Dynamics.

Physics

I. *a.* Chemistry and Mathematics.

b. Chemistry, Physical Chemistry, Mathematics, Astronomy, Applied Electricity, Geological Physics.

II. Physics 1, 2, or 3, with corresponding laboratory courses, Advanced General Physics, Applied Electricity.

Astronomy

II. Celestial Mechanics, Cosmical Physics, with observatory work.

Chemistry

I. *a.* Mathematics (through the Calculus), General Physics, Mineralogy, Physical Chemistry.

b. Mathematics, Physics, Mineralogy, Geology, Physical Chemistry, Biology 1.

II. Chemistry 2 or 3, Physical Chemistry, with corresponding laboratory courses.

Geology

I. *a.* Students who take Geology as their principal subject, are allowed to select courses suitable as a training for general geology and teaching, or those which lead to specialization in Paleontology, Stratigraphic Geology, Petrography, Mineralogy, or Geological Physics. All students are expected to be familiar with the matter given in the elementary or undergraduate courses.

b. (1) Biology, (2) Chemistry, (3) Physics, (4) Petrography, (5) Mineralogy, (6) Paleontology.

Nos. 1-3 may be taken as second subordinates by all students in Geology.

Nos. 4-5 may be taken as a first subordinate by students specializing in Paleontology or Stratigraphic Geology, who are advised to take Biology or Physics as a second subordinate.

No. 6 may be taken as a first subordinate by students specializing in Petrography or Mineralogy, who are advised to take chemistry or physics as a second subordinate.

II. For students in Physics: Geological Physics, Exploratory Surveying, Crystallography—Optical Mineralogy (Geology 1 in part, Advanced Mineralogy in part).

For students in Chemistry: Geology 3 and Economic Geology, Geology 1, Advanced Mineralogy.

For students in Biology: Geology 1 or 2, Paleontology and Paleobotany, Historical Geology.

Zoology

I. *a.* Two or more of the following: Chemistry Physics, Botany, Geology, Physiology, Psychology.

b. Botany, Physiology, Geology, Anatomy, Pathology.

II. Biology 1, Biology 2 (Part 1), Biology 3 (Part 1), a graduate course.

Botany

I. *a.* Physics, Chemistry, General Biology, Zoology

b. Zoology, Physical or Organic Chemistry, Geology, Physiology, Pathology.

II. An undergraduate course, with laboratory work one of the graduate courses.

Physiology

I. *a.* Physics, Chemistry, and Biology.

b. Zoology, Botany, Physics, Chemistry, Physiological Chemistry.

II. Course 4, as on page 180.

Greek

I. *a.* Latin and English (language and literature).

b. Latin, Comparative Grammar, Sanskrit, English, Semitic, Classical Archæology, Philosophy.

II. Prescribed courses of reading in the chief ranges of Classical Greek literature of greater or less extent for first or second subordinate. Two courses of practical exercises for the first subordinate, one course for the second. Attendance on the Seminary for two years for the first subordinate, one year for the second.

Latin

I. *a.* Greek and English (language and literature).

b. Greek, Sanskrit and Comparative Philology, Classical Archæology (Greek and Roman), English, a Romance language, a Semitic language, History.

II. Attendance on the Seminary and lectures during two years for the first subordinate subject, one year for the second, in both cases with prescribed courses of reading in Roman literature.

Those who make Latin their principal subject must take Greek as one of their subordinate subjects. They must also follow the regular courses in Latin Epigraphy and Palæography, as well as in the Comparative Grammar of the Indo-European languages.

Classical Archaeology

I. *a.* Latin and Greek.

b. Latin, Greek, History, Sanskrit and Comparative Philology, Italian or another Romance language.

II. Five hours weekly for two years for the first subordinate; five hours weekly for one year for the second. Prescribed courses of reading.

Those who make Classical Archæology a principal subject are urged to plan for at least a year of residence in Europe, preferably in the American School of Classical Studies at Athens or in the American School of Classical Studies in Rome. For advanced students of Roman Archæology, a reading knowledge of Italian is indispensable.

Sanskrit and Comparative Philology

I. *a.* Classical or Modern Philology, History, Philosophy.

b. Greek, Latin, Germanic Philology, English, Semitic Philology, Philosophy.

II. For the first subordinate subject, a course in Sanskrit, two lectures a week during two years, and attendance on the Vedic Seminary for a half-year, one hour a week; for the second subordinate subject, a course in Sanskrit, two hours a week during a year and a half.

In no case has a student whose principal subject was Sanskrit and Comparative Philology restricted himself to two subordinate

subjects. As a rule Avestan, Lithuanian, Gothic, English, an other subjects figured among his courses, in addition to the prin cipal and the two subordinate subjects.

Oriental Seminary

I. *a.* For Hebrew as the principal subject—German Greek, Latin, Arabic, History of the Ancient East, Bib lical Antiquities, Geography of Western Asia.

b. Assyrian, Arabic, Syriac, or Ethiopic, as th first or second subordinate subject; Egyptology, Histor of the Ancient East, History of Philosophy, Greek, San skrit, Philippine languages, as the second subordinate.

II. For Hebrew as first subordinate—Comparativ Hebrew Grammar, Hebrew Prose Composition, Old Te tament Seminary.

For Hebrew as second subordinate—the second year' course in Hebrew and private reading of at least fift chapters of the Hebrew Bible.

English

I. *a.* Gothic, Old High German, Middle High Ger man, Old Norse, Old French, German and French Litera ture.

b. German, French, Italian, Spanish, Greek, Latin Sanskrit, History, Philosophy.

II. Courses in the history of the Language and th Literature, and some special work in selected periods o subjects.

German

I. *a.* English, French, Latin.

b. English, French, Latin, Sanskrit, Spanish, Greek, History of Philosophy, History.

II. German as second subordinate—Courses 1, 2, 5, Seminary in Middle High German, one year's member ship in the Germanic Society (or a similar amount of work in German Literature).

German as first subordinate—a combination of the two alternatives indicated above; two years' membership in the Germanic Society.

Romance Languages

I. *a.* Latin; a reading knowledge of Spanish, or of Italian, if either of these is chosen as the principal subject; an elementary acquaintance with French, Spanish, or Italian history, according to selection of subject.

b. Sanskrit, Greek, Latin, German, English, History, Philosophy.

II. For the first subordinate, Literature (old and modern), Language (old and modern), Physiological Phonetics, Popular Latin, Private Reading.

For the second subordinate, Literature (modern), Language (modern), Private Reading.

History

I. *a.* Political Economy, Political Science, Latin, French, German.

b. Political Economy, Political Science, Philosophy, English, French.

II. For the second subordinate, lectures, with collateral research, two hours a week for two years, either in European, English, or American history; for first subordinate, four hours a week for two years, with choice in the same subjects.

Political Economy.

I. *a.* History and Political Science.

b. History, Political Science, Philosophy, English, Mathematics, Biology.

II. For the first subordinate, two graduate courses for two years, with prescribed reading; for the second subordinate, two graduate courses for one year, with prescribed reading.

Political Science

I. *a.* History, Political Economy, and the Principles of Private Law.

b. History, Political Economy, Philosophy, the Principles of Private Law.

II. Two hours' lecture work, with collateral reading, for two years, for the second subordinate; four hours' work for two years for the first subordinate.

Philosophy

The choice of subordinate subjects is made in consultation with the professors. The different branches of the department—Philosophy, Scientific Psychology, and Education—do not lend themselves to a single scheme of subordinate subjects, since wide variations arise in individual cases.

COLLEGIATE INSTRUCTION

The Johns Hopkins University makes ample provision for collegiate instruction. The courses offered to undergraduates are maintained with no less care and thoroughness than those intended for advanced students; many of the most experienced members of the academic staff cooperate in the conduct of them. No small part of the influence and usefulness of the university is in connection with the collegiate classes, in which, since 1876, more than two thousand students have been enrolled.

Certain features of organization and administration have contributed to the effectiveness of the undergraduate work. The scrupulous observance of the distinction between the disciplinary methods appropriate to college teaching and the freer methods of advanced instruction; the "group" arrangement of studies, combining a reasonable liberty of choice with a sufficient exercise of authority; the facilities afforded young men of superior capacity for carrying their studies beyond the requirements of graduation; the influence upon younger pupils of the presence of a large body of graduate scholars conducting investigations in all the great departments of learning,—these conditions have proved favorable to the development of earnestness and scholarly devotion.

Arrangement of Courses

Upon admission to the university, an undergradua student is assigned to an Adviser (see page 247), a under his guidance is expected to select a scheme studies composed of courses more or less connected. order to help the student in this selection, five groups studies are organized, details concerning which are giv below. Having once made a choice, a student may n change his group, except with the consent of his Advis and with the approval of the Executive Committee of t Board of Collegiate Studies.

In the formation of the groups it is intended to co bine such studies as shall give the student the essenti elements of a liberal education, and, at the same tim special training in certain coordinate subjects. By th method the student is not bound to a particular routi of work for which he may feel no especial inclination, n yet is it possible for him to waste his time and attentio by the injudicious selection of wholly unrelated subject In each group certain studies are prescribed for all st dents who are candidates for a degree, and certain oth studies are peculiar to the individual group.

By reference to the detailed statement of each grou given on pages 237-241, it will be seen that the courses c the first two years are prescribed, but that in each of th last two years there are but one or two prescribed studie In each of these last two years, therefore, a student ma subject to the provisions already noted, elect four course With the approval of his Adviser he may select an courses which he is prepared to enter.

The following is a general statement of the characte istic features of each group:

Group I. Ancient Languages

In Group I the emphasis is laid upon Latin and Greek each of which is studied for at least two years. In th

last two years the courses are so arranged that the student may continue the study of these languages; or, if he desires, he may devote himself to the study of History, Modern Languages, or Science.

Group II. Modern Languages

In Group II the study of Latin is continued for two years, but the literary training of the student is based chiefly on the study of English, French, and German, with Spanish and Italian if desired. In the later years, the courses are arranged so as to permit the student to continue the study of Modern Languages, or to give his attention to History or Science.

Group III. History and Political Economy

In Group III the study of Latin is continued as in Groups I and II, but the student devotes the greater part of his time to History and Political Economy. He may continue these studies during the last two years, or he may take advanced courses in Latin, Modern Languages, or Science.

Group IV. Mathematics and Physics

In Group IV the training of the student is based upon the study of the exact sciences rather than upon language and history. Mathematics and Physics are studied for at least two years, and the student may also follow courses in Chemistry, Biology, or Geology. In the last two years the student may continue the former studies, or he may take advanced courses in Modern Languages and History.

Group V. Chemistry, Biology, and Geology

In Group V the natural sciences form the basis of instruction, being supplemented by the prescribed courses in Modern Languages, History or Political Economy, and

Mathematics. In the later years the student may
tinue the study of Science, or he may devote his at
tion to Modern Languages or History.

Students who intend to enter the medical departn
of this university, should choose Group V, and should
range to pursue the following courses: English, Fre
and German, each for two years; Mathematics, for
years; Chemistry, for three years; Biology and Phy
each for one year. Other prescribed courses are His
or Economics for one year, and Philosophy for one y
These students are advised by the Medical Faculty to
range their work so that their last year shall incl
courses in Chemistry and Biology, and, if possibl
course in the Chemistry of the Carbon Compounds.

These courses may be arranged as follows:—*F*
year: Chemistry 1, French 1 or German 1, English C
position 1, Mathematics 1, Physical Training. *Sec*
year: English Literature 1, German 1 or French
Mathematics 2, Chemistry 2, Vocal Training, and a l
course to be elected. *Third year:* Physics 1, with la
atory, General History (History 2) or Political Econo
French 2 or German 2, Biology 1, Forensics. *Fou*
year: Philosophy, German 2 or French 2, Chemistr
Biology 2.

It should be noted that, in order to enter the med
department, the degree of Bachelor of Arts is requi
and, further, that the conditions for this degree, as sta
on pages 245, 246, prescribe at least three courses in
definite subject.

ELECTIVE COURSES

A student may take as an elective any course that he is prepared to enter. Numerous courses, other than those described under the separate groups, will be given as a rule each year; and they, as well as those scheduled in the groups, may be chosen as elective courses, under the conditions specified on page 234. In 1909-10 these will be in the following subjects:

Latin.
Greek.
Greek and Roman Life.
Classical Archæology.
Sanskrit.
Comparative Philology.
Hebrew.
English and Anglo-Saxon.

REQUISITES FOR THE DEGREE OF BACHELOR OF ARTS

As evidence that the collegiate course has been successfully completed, the degree of Bachelor of Arts is conferred at its close. The degree signifies, in the case of every recipient, such instruction in ancient and modern languages, in mathematics, in the physical and natural sciences, in literature, philosophy, and history, as is believed to be essential to a liberal education.

Twenty courses are required for graduation, and no combination of studies is accepted which does not include three courses in one subject and two courses in another subject.

All candidates for a degree take the following prescribed courses, which are for one year unless otherwise noted:

Rhetoric.

English Literature.

French.

German.

History or (in Groups IV and V) Political Economy.

Physics.

Mathematics.

In Groups I, II, and III, a half-year.

In Groups IV and V, one year.

Philosophy.

Vocal Training.

Forensics.

Physical Exercises.

A Laboratory Course—

In Groups I, II, and III, Natural History (a half-year).

In Groups IV and V, Chemistry and Physics.

The remaining courses necessary to complete the number required are chosen, subject to the approval of the Adviser, in accordance with the schemes outlined under the several groups.

A student may be admitted to advanced standing, in accordance with the regulations given on page 253, but in all cases the candidate must pursue the last year of his undergraduate course in this institution.

In general, four years of residence are necessary for the completion of the courses required for a degree. A capable student may, however, complete this work in three years. Such a student may (1) anticipate certain of the courses by special examination at entrance;* (2) present himself, at the beginning of an academic year, for examination in a single course, provided the Committee on Admission and Advanced Standing, being satisfied that the student can obtain competent instruction, has authorized him, in advance, to prepare this course during the summer vacation;* (3) take, under certain conditions, in any year of residence except the first, a greater number of courses than is called for in the program; (4) offer nineteen courses for graduation instead of twenty, in accordance with the following provision:

In case a student has an average of not less than 9 for the work of his third year, and has not received a mark as low as 7 for any of his courses since admission to the university, he need offer only nineteen courses for graduation.

A student whose average in his studies for each of his last two years has not been less than 9, and who has not received a mark less than 7.5 in any of his courses during his last three years, shall receive his degree WITH HONOR.

Special students who have been in residence at least two years, and who have completed their work in a satisfactory manner, shall receive a certificate stating the facts and signed by the President of the University.

*Forms of application for these privileges are provided and must be obtained from the Registrar.

COMMITTEES AND ADVISERS

Standing Committees. The Board of Collegiate Studies appoints four standing committees:

1. The Executive Committee, which has charge of such matters pertaining to discipline and general administration as may be delegated to it by the Board of Collegiate Studies.

2. The Committee on Admission and Advanced Standing.

3. The Committee on Scholarships and Honors.

4. The Committee on Assignment of Advisers.

The Dean of the College Faculty is *ex officio* a member of each of these.

Advisers. When an undergraduate student is admitted to the university, he is assigned to an Adviser by the standing committee charged with this duty, and he will, under ordinary circumstances, remain under the direction of the same Adviser during his whole course. The approval of the Adviser is necessary before the student can enter upon any course of study; no instructor will receive into a class a student who does not bring with him (in a book provided for that purpose) assurance that his Adviser approves his pursuing the study at that time, and no student is allowed, without the consent of his Adviser, to discontinue any work. Each Adviser endeavors to establish relations of friendliness and confidence with the students assigned to his care; he not only gives counsel in regard to the selection of studies, but promotes the welfare of his students in every practicable way.

REQUIREMENTS FOR ADMISSION

Those who wish to pursue the undergraduate course in this university, should apply to the Registrar for a blank form of "Application for Admission," which must be filled up and returned at least one week before the time set for the entrance examinations. These examinations are held at the university in June and September of each year.

To accommodate those who wish to take their examinations elsewhere, the university will accept certificates from the College Entrance Examination Board for subjects passed in accordance with its regulations. (See page 254.)

APPLICANTS FOR ADMISSION

Those who wish to become candidates for the degree of Bachelor of Arts must present evidence of a satisfactory knowledge of the following subjects:

Mathematics.	Greek, or French and German.
Latin.	Physical Geography, or a Science such
English.	as Botany, Chemistry, or Physics.
History.	Free-hand Drawing.

Details of the requirements will be found in the following pages.

To show that his knowledge is satisfactory the applicant must submit evidence of two kinds:

1. He must present certified statements of the successful completion of courses in the required subjects. These statements should specify the number of weeks and the number of hours per week that the applicant has given to the study of each subject, and the amount of ground covered in each. The authors read in each language should be specified, and the statement as to science should show that the student did laboratory work.

Blank spaces for these certified statements will be found in the form of "Application for Admission" referred to above, and these should be filled and signed by the teacher under whom the applicant has prepared for college, or by the head of the school.

2. If these statements are satisfactory, the applicant will be admitted to the matriculation examination in Mathematics, History, and the several languages, but will not be required to take an examination in Physical Geography or Science, or in Drawing.

If the statements are unsatisfactory, the Committee on Admission will prescribe such conditions as may be necessary. An applicant who has not had a satisfactory course in Drawing will, if admitted, be required to take the course offered by the university.

Applicants are received, without examination, from certain schools in the city of Baltimore which have been approved by the Board of Collegiate Studies, provided their "Applications" show that they have fully and satisfactorily covered the requirements for admission.

DIVISION OF THE MATRICULATION EXAMINATION

The applicant may pass a part of the examinations one year before his admission to the university and receive credit, under the following conditions:

In his application *he must distinctly declare his intention to divide the examinations.* The subjects passed will not count towards matriculation unless he offers the remaining subjects within the ensuing year. The first part of the divided examination will be confined to the following subjects, of which he will be expected to pass in the first three at least:

English (*a*).
Algebra (*a*).
Latin (*a*).
Plane Geometry.
Greek (*a*).
French or
German.
History of the United States or
of Greece.
History of England or of Rome.

REQUIREMENTS FOR MATRICULATION

1. MATHEMATICS.—Algebra; Plane Geometry; Plane Trigonometry.

The requirements in Algebra are as follows:

(*a*). To Quadratics, including the four fundamental rules, the use of parentheses, factoring, highest common factor, lowest common multiple, complex fractions, equations of the first degree in one or more unknown quantities, and problems leading to such equations, inequalities, radicals, and the use of fractional and negative exponents.

(*b*). Quadratics and beyond, including quadratic equations in one and two unknown quantities, and problems leading to such equations, the theory of quadratic equations in one unknown quantity, ratio and proportion, the progressions, the elementary treatment of permutations and combinations, the binomial theorem for positive integral exponents, and the use of logarithms.

The subjects required in Plane Geometry and in Trigonometry are those treated in the ordinary text-books.

2. ENGLISH.—The examination consists of two parts:

a. Reading. The candidate will be required to write a paragraph or two on each of several topics chosen by him from a considerable number—perhaps ten or fifteen—set before him in the examination paper. These topics are selected with reference to certain books, a list of which is given below. This part of the examination is designed, primarily, to test the candidate's power of clear and accurate expression, and will call for only a general knowledge of the substance of the books. As additional evidence of preparation, the candidate may present an exercise book, properly certified by his instructor, containing compositions or other written work.

The books prescribed for this part of the examination are:

In 1909, 1910, and 1911; Group I (*two* to be selected).

Shakespeare's *As You Like It, Henry V, Julius Cæsar, The Merchant of Venice, Twelfth Night.*

Group II (*one* to be selected).

Bacon's *Essays;* Bunyan's *The Pilgrim's Progress, Part I; The Sir Roger de Coverley Papers* in *The Spectator;* Franklin's *Autobiography.*

Group III (*one* to be selected).

Chaucer's *Prologue;* Spencer's *Faerie Queen* (selections); Pope's *The Rape of the Lock;* Goldsmith's *The Deserted Village;* Palgrave's *Golden Treasury* (First Series), Books II and III, with especial attention to Dryden, Collins, Gray, Cowper, and Burns.

Group IV (*two* to be selected).

Goldsmith's *The Vicar of Wakefield;* Scott's *Ivanhoe;* Scott's *Quentin Durward;* Hawthorne's *The House of the Seven Gables;* Thackeray's *Henry Esmond;* Mrs. Gaskell's *Cranford;* Dickens' *A Tale of Two Cities;* George Eliot's *Silas Marner;* Blackmore's *Lorna Doone.*

Group V (*two* to be selected).

Irving's *Sketch Book;* Lamb's *Essays of Elia;* De Quincey's *Joan of Arc* and *The English Mail Coach;* Carlyle's *Heroes and Hero Worship;* Emerson's *Essays* (selected); Ruskin's *Sesame and Lilies.*

Group VI (*two* to be selected).

Coleridge's *The Ancient Mariner;* Scott's *The Lady of the Lake;* Byron's *Mazeppa* and *The Prisoner of Chillon;* Palgrave's *Golden Treasury* (First Series), Book IV, with special attention to Wordsworth, Keats, and Shelley; Macaulay's *Lays of Ancient Rome;* Poe's *Poems;* Lowell's *The Vision of Sir Launfal;* Arnold's *Sohrab and Rustum;* Longfellow's *The Courtship of Miles Standish;* Tennyson's *Gareth and Lynette, Lancelot and Elaine,* and *The Passing of Arthur;* Browning's *Cavalier Tunes, The Lost Leader, How they Brought the Good News from Ghent to Aix,*

Evelyn Hope, Home Thoughts from Abroad, Home Thoughts from the Sea, Incident of the French Camp, The Boy and the Angel, One Word More, Hervé Riel, Pheidippides.

b. Study and Practice. This part of the examination presupposes the careful study of each of the works named below. The examination will be upon subject-matter, form, and structure, and will also test the candidate's ability to express his knowledge with clearness and accuracy.

The books set for this part of the examination are:

In 1909, 1910, and 1911: Shakespeare's *Macbeth;* Milton's *L'Allegro, Il Penseroso Comus,* and *Lycidas;* Burke's *Speech on Conciliation with America,* or Washington's *Farewell Address* and Webster's *First Bunker Hill Oration;* Macaulay's *Life of Johnson,* or Carlyle's *Essay on Burns.*

In connection with the reading and study of the required books, parallel or subsidiary reading should be encouraged, and a considerable amount of English poetry should be memorized. The essentials of English grammar should not be neglected in preparatory study.

No candidate will be accepted in English whose work is notably defective in spelling, punctuation, idiom, or division into paragraphs.

Although candidates will be permitted to take the entire examination at the time of entrance, it is strongly recommended that Part *a* be taken as a preliminary examination and Part *b* as a final examination. Candidates will thus have an opportunity to make up deficiencies which may be discovered at the preliminary examination, and to enter the university without a condition in English.

3. HISTORY.—The outlines of the History of England and the United States, or of the History of Greece and Rome, and the outlines of the geography of these countries.

4. LATIN.—A systematic course of instruction extending over four school years at least is presupposed. The applicant should have read the following texts:

Cæsar, at least four books.
Cicero, at least six orations.
Virgil, at least six books.
Ovid, at least one thousand lines.

The examination includes three elements:

(*a*) Latin Grammar (both forms and syntax), based on Cæsar, *Gallic War,* Book I, and Cicero, *Orations against Catiline,* I, II, and III.

(*b*) Translation into English of Latin prose and verse, together with questions suggested by the text, including questions on prosody. A part of the translation will be at sight, and, in all translations, simple, idiomatic English will be required.

(*c*) Translation into Latin of a passage of easy connected English prose.

In case the examination is divided, as provided for on page 249, (*a*) should be offered at the preliminary examination.

5. GREEK.—A systematic course of instruction extending over three school years at least is presupposed. The applicant should have read the following texts:

Xenophon, *Anabasis,* at least four books.
Homer, *Iliad,* at least four books, or *Odyssey,* at least six books.

The examination includes three elements:

(*a*) Greek Grammar (both forms and syntax), based largely on Xenophon's *Anabasis*, books I and II.

(*b*) Translation into English of Attic prose and of Homer, together with questions suggested by the text, including questions on Homeric life and the prosody of the Homeric poems. A part of the translation will be at sight, and in all translations simple idiomatic English will be required.

(*c*) Translation into Greek (with accents) of a passage of easy connected English prose.

In case the examination is divided, as provided for on page 249, (*a*) should be offered at the preliminary examination.

Applicants not offering Greek must meet the following requirements in French and German:—

6. FRENCH.—The requirements in French presuppose a systematic course extending over at least two school years, at the end of which time the student should be able to pronounce French accurately, to read at sight easy French prose, to put into French simple English sentences taken from the language of every-day life or based upon a portion of the French text read, and to answer questions on the rudiments of French Grammar. The examination, *which may not be divided*, comprises:

(*a*) Questions on the elements of French grammar, including the inflection of adjectives, particles, and pronouns; the use of personal pronouns, common adverbs, prepositions, and conjunctions; the order of words in the sentence; and the elementary rules of syntax.

(*b*) The translation into French of short sentences illustrative of the rules of grammar, and of a short paragraph based on a French text given. In place of the translation of this paragraph, the candidate may substitute an original exercise in French on a subject set by the examiner.

(*c*) The translation, at sight, of easy French prose.

(*d*) An oral exercise in pronunciation.

The candidate should have read from 400 to 500 pages of French prose taken from a standard reader and from the texts edited for elementary use, as listed by the leading publishers; especially those of the works of About, Bruno, Dumas, Erckmann-Chatrian, Halévy, Laboulaye, Labiche and Martin, Malot, Sand, and Verne. Grammars recommended are Frazer and Squair's Part I, Longmann's, Chardenal's Complete French Course, and Perry and Reums' French Book.

7. GERMAN.—The requirements in German presuppose at least two years of school work under approved methods, with four recitations weekly, and the reading of a minimum of 300 pages of easy dialogue and narrative prose.

Candidates are expected to give particular attention to pronunciation, to the acquisition of an elementary German vocabulary, and to an accurate knowledge of the rudiments of German grammar, in quantity corresponding to Vos's *Essentials of German*.

REQUISITES FOR THE DEGREE OF BACHELOR OF ARTS

As evidence that the collegiate course has been successfully completed, the degree of Bachelor of Arts is conferred at its close. The degree signifies, in the case of every recipient, such instruction in ancient and modern languages, in mathematics, in the physical and natural sciences, in literature, philosophy, and history, as is believed to be essential to a liberal education.

Twenty courses are required for graduation, and no combination of studies is accepted which does not include three courses in one subject and two courses in another subject.

All candidates for a degree take the following prescribed courses, which are for one year unless otherwise noted:

Rhetoric.

English Literature.

French.

German.

History or (in Groups IV and V) Political Economy.

Physics.

Mathematics.

In Groups I, II, and III, a half-year.

In Groups IV and V, one year.

Philosophy.

Vocal Training.

Forensics.

Physical Exercises.

A Laboratory Course—

In Groups I, II, and III, Natural History (a half-year).

In Groups IV and V, Chemistry and Physics.

SPECIAL STUDENTS

The university is ready to receive as special student those who are qualified by age, character, attainment and habits of study, to attend its classes and lectur with profit to themselves and the institution. Such pe sons may be admitted, without matriculation, to a lin ited number of undergraduate courses; but the privileg once accorded will be forfeited if the student is foun unworthy of it.

The requirements for admission as a special studen are that the applicant shall pass such examinations, an shall present such other evidence of fitness to pursue th desired courses, as may in each case be required by th Committee on Admission. Unless excused for some def nite reason, the applicant will be required to satisfy th matriculation requirements in English, in French or Ge man, and in either Latin or Mathematics. In the pas many excellent students have been thus enrolled, amon whom not a few have subsequently changed their plan passed the matriculation examinations, and at length r ceived the degree of Bachelor of Arts.

Admission on these terms will not be granted unles the applicant be of some maturity, of serious intent, an of proved ability, and can satisfy the Committee on A mission that there are valid grounds for admitting hi without full matriculation. A student cannot be a mitted as a special student merely on the ground that h is unable to meet the full matriculation requirements.

College Entrance Examination Board

The College Entrance Examination Board holds exami nations at numerous places in the country about the thir week of June in each year, information in regard t

COMMITTEES AND ADVISERS

Standing Committees. The Board of Collegiate Studies appoints four standing committees:

1. The Executive Committee, which has charge of such matters pertaining to discipline and general administration as may be delegated to it by the Board of Collegiate Studies.

2. The Committee on Admission and Advanced Standing.

3. The Committee on Scholarships and Honors.

4. The Committee on Assignment of Advisers.

The Dean of the College Faculty is *ex officio* a member of each of these.

Advisers. When an undergraduate student is admitted to the university, he is assigned to an Adviser by the standing committee charged with this duty, and he will, under ordinary circumstances, remain under the direction of the same Adviser during his whole course. The approval of the Adviser is necessary before the student can enter upon any course of study; no instructor will receive into a class a student who does not bring with him (in a book provided for that purpose) assurance that his Adviser approves his pursuing the study at that time, and no student is allowed, without the consent of his Adviser, to discontinue any work. Each Adviser endeavors to establish relations of friendliness and confidence with the students assigned to his care; he not only gives counsel in regard to the selection of studies, but promotes the welfare of his students in every practicable way.

II. FACULTY OF MEDICINE

Terms of Admission

The courses in medicine given in this university are planned for the professional education of those students who have been especially fitted to receive instruction by a course of preliminary training in the liberal arts, and especially in those branches of science, like physics, chemistry, and biology, which underlie the medical sciences. Men and women are admitted upon the same terms.

The following classes of students are received as candidates for the degree of Doctor of Medicine:

1. Those who have completed the chemical-biological course in this university (Group V) leading to the degree of Bachelor of Arts.

2. Graduates of approved colleges or scientific schools who can furnish evidence: (*a*) That they have acquaintance with Latin and a reading knowledge of French and German; (*b*) That they have such knowledge of physics, chemistry, and biology as may be obtained by a year's course in these subjects when accompanied by laboratory work.

In biology the candidate, in addition to lectures and recitations, should have followed for at least a year a laboratory course of six or more hours a week in the structure, life-history, and vital activities of selected types of animal and vegetable life. Courses in botany or zoology will be accepted, provided the laboratory work has been adequate. It is desirable also that candidates should have taken a laboratory course in embryology.

The candidate should have followed a course in general chemistry for at least a year. This course should include laboratory work, about five hours a week through the year, and lectures and class-room work covering the outlines of inorganic chemistry and the elements of organic chemistry. A good knowledge of the subject as presented in Remsen's "Introduction to the Study of Chemistry" may be regarded as the minimum requirement. A fuller knowledge of chemistry is desirable.

In physics, the candidate should have followed a collegiate course for at least one year. This should include four hours a week of class-room work and at least one afternoon a week of

quantitative work in the laboratory. Special attention should be given to theoretical mechanics and to the mechanical and electrical experiments.

In Latin the candidate should have studied Latin grammar and should possess at least such knowledge of the language as may be acquired by reading four books of Cæsar or their equivalent.

3. Those who give evidence by examination that they possess the general education implied by a degree in arts or in science from an approved college or scientific school, and the knowledge of French, German, Latin, physics, chemistry, and biology above indicated.

Applicants for admission will receive blanks to be filled out relating to their previous courses of study. They are required to furnish certificates from officers of the colleges or scientific schools in which they have studied, as to the courses pursued in physics, chemistry, and biology. If the certificates are satisfactory, no examination in these subjects will be required from those who possess a degree in arts or in science from an approved college or scientific school.

Hearers and special workers, not candidates for a degree, will be received at the discretion of the Faculty.

ADMISSION TO ADVANCED STANDING

Applicants for admission to advanced standing must furnish evidence (1) that the foregoing terms of admission as regards preliminary training have been fulfilled, (2) that courses equivalent in kind and amount to those given here preceding that year of the course for admission to which application is made, have been satisfactorily completed, and (3) must pass examinations, at the beginning of the session in October, in all the subjects that have been already pursued by the class to which admission is sought. Certificates of standing elsewhere cannot be accepted in place of these examinations.

During the second year general pathology, patholog
anatomy, and pharmacology are studied. A pract

hygienic and pathological bearings, is given during th

Upon the basis of thorough training in the med
sciences, pursued during the first two years of the cou
the student should be well fitted to undertake the st
of practical medicine and surgery.

During the third year the general principles of m
cine, surgery, obstetrics, and gynecology are studied,
clinical instruction is given in these subjects and
nervous diseases. The study of certain special bran

of medicine is also begun. Leading features of the work of this year are the courses in the clinical laboratories and practical work in the dispensary.

During the fourth year the practical study of medicine and surgery is continued, and instruction is given in the various special branches of medicine and surgery, viz.: dermatology, genito-urinary diseases, orthopedic surgery, laryngology and rhinology, ophthalmology and otology, pediatrics, and psychiatry. In this year the students serve as clinical clerks and surgical dressers in the wards of the hospital and are in daily attendance at special classes in the dispensary. They also have an opportunity to take various elective courses which are described specifically in the catalogue of the medical department. For the ward and dispensary work the class is divided into small groups.

Instruction in hygiene, medical zoology, forensic medicine, and medical history is provided during the course.

Work in the dissecting room, in the laboratory, and at the bedside, demonstrations, clinics, lectures, and recitations are the main features of the methods of instruction. Simple didactic lectures occupy a subsidiary position, as compared with instruction by recitations and demonstrations and especially by practical work in the various laboratories, in the hospital wards, and in the dispensary. In consequence of the high standard of admission, the classes are not likely to be excessively large, and abundant opportunity is therefore afforded for practical work for each student and for personal contact between teacher and student.

Courses for Graduates in Medicine

Courses of instruction for graduates in medicine are given throughout the year. These courses are in Anatomy, Histology and Organology, Pathology, Bacteriology, Pharmacology and Toxicology, Physiology, Neurol-

ogy, Neurological Technique, Embryology, Physiological Chemistry, Clinical Microscopy, Medicine, Pediatrics, Obstetrics, Gynecological Pathology, Surgical Pathology, Operative Surgery, Orthopedic Surgery, Genito-Urinary Surgery, X-Ray Diagnosis and Therapeutics, Cystoscopy, and Ophthalmology and Otology. The instruction is intended to meet the requirements of practitioners of medicine, and is almost wholly of a practical character. It includes laboratory courses, demonstrations, bedside teaching, and clinics in the wards, dispensary, amphitheatre, and operating rooms of the hospital.

Detailed statements as to the courses of instruction and other information are given in the annual Catalogue and Announcement, which will be sent upon application to the Registrar of the school.

ENDOWED PROFESSORSHIPS AND LECTURESHIPS

The Baxley Professorship

By the will of Dr. Henry Willis Baxley, of Baltimore, who died March 13, 1876, a sum of money, amounting to $23,836.52, was received by the Trustees of the University to endow any medical professorship that they might think proper. This fund was kept intact and allowed to accumulate until it had reached the sum of $50,000. In 1901, the Trustees directed that the fund be set apart as a partial endowment of the Professorship of Pathology in the University, to be known as the Baxley Professorship of Pathology. The first incumbent is Dr. William H. Welch.

The Caroline Donovan Professorship

Mrs. Caroline Donovan, of Baltimore, gave to the University in November, 1889, shortly before her death, the sum of one hundred thousand dollars to establish a professorship of English literature. The first incumbent is Dr. James W. Bright, who was designated Caroline Donovan Professor of English Literature in 1905. During the intervening years courses of lectures were given by resident and non-resident scholars devoted to study in this field.

The Percy Turnbull Memorial Lectureship

On May 6, 1889, Mr. and Mrs. Lawrence Turnbull, of Baltimore, founded a lectureship in memory of their son, Percy Graeme Turnbull, their purpose being to enable the University to offer an annual course of lectures on poetry by a lecturer to be chosen by the President of the University from among "properly qualified authors, writers, or professors of America or Europe." At present the sum

of $1,000 is provided annually. Sixteen courses have been given on this foundation, the first in 1891. The list of lecturers includes Edmund C. Stedman, Richard C. Jebb, Charles Eliot Norton, George Adam Smith, Ferdinand Brunetière, and other foreign and American scholars of distinction.

The Herter Lectureship

Dr. and Mrs. Christian A. Herter, of New York, gave to the University in November, 1902, the sum of $25,000 "for the formation of a memorial lectureship designed to promote a more intimate knowledge of the researches of foreign investigators in the realm of medical science." The income of the lectureship is $1,000. According to the terms of the gift, some eminent worker in physiology or pathology is to be asked each year to lecture at the University upon a subject with which he has been identified. The selection of the lecturer is to be left to a committee representing the departments of pathology, physiological chemistry and clinical medicine, and if "in the judgment of the committee it should ultimately appear desirable to open the proposed lectureship to leaders in medical research in this country there should be no bar to so doing." Four courses have been given on this foundation, beginning in 1904. The lecturers were Paul Ehrlich, of Frankfort-on-the-Main, Hans H. Meyer, of Vienna, Almroth E. Wright, of London, and Edward A. Schäfer, of Edinburgh.

The James Schouler Lectureship

In March, 1908, Dr. James Schouler, of Boston, who had lectured in this University annually since 1891, announced his purpose to found a permanent lectureship in the University, to be known as "The James Schouler Lectureship in History and Political Science." It is provided that the endowment of the lectureship will secure

ally be $25,000. The donor expressed the wish that "such lectures be given annually if possible, * * * and that persons of promise or prominence be selected to lecture, who are capable of interesting as well as instructing an audience." The lectureship was inaugurated in April, 1909, by Abbott Lawrence Lowell, President (elect) of Harvard University.

The Albert Shaw Lectureship

Dr. Albert Shaw, of New York, a graduate of this University, gives annually the sum of $250 as the honorarium of a lecturer on Diplomatic History. The lectures are given before the advanced students of history and political science, and nine courses have been delivered, beginning in 1898. The lecturers, with one exception, have been alumni of the University.

In January, 1904, the Trustees decreed that certain chairs should bear the names of leading contributors to the Endowment Fund of 1902, as memorials of their liberality. In pursuance of this action four professorships have been thus designated: The B. N. Baker Professorship of Chemistry; the Francis White Professorship of Greek; the W. W. Spence Professorship of Semitic Languages; the Henry Walters Professorship of Zoology.

THE JOHNSTON SCHOLARSHIPS

These scholarships, of which there are three, know
the Henry E. Johnston Scholarship, the James Buch
Johnston Scholarship, and the Henry E. Johnston,
Scholarship, were founded by Mrs. Harriet Lane J
ston, of Washington, formerly of Baltimore, in mer
of her husband and her two sons. They are awarded

Academic Council. The stipend of each scholarshi
the income of thirty thousand dollars. They are off

power of independent research. The holders of the s
arships will be expected to devote themselves to s
and research in their chosen subjects, though they ma

REGULATIONS

Candidates for the Johnston Scholarships must n
application, in writing, to the President of the J
Hopkins University before the first of May. The app
tions must be accompanied by such evidence of the
didates' fitness as they may be able to present. The I
ident will refer the papers to the Academic Council
whom the nominations will be made to the Board
Trustees at their meeting in June.

Holders of the scholarships may not engage in teac
elsewhere.

The scholars will be appointed for one year, bu
their work should prove satisfactory, they will gene
be reappointed.

FELLOWSHIPS

Fellowships by Courtesy

The Academic Council may, at their discretion, by special vote, enroll as Fellows by Courtesy—

(*a*) Gentlemen who are, or who have been, teachers in colleges and other like institutions, and who wish, for brief periods, to avail themselves of the opportunities here afforded for study and for the use of books and laboratories.

(*b*) Holders of fellowships in other colleges, during their residence here.

(*c*) Those who have been fellows of this university and desire to continue in residence.

Fellows by Courtesy will not be exempt from the payment of fees, except by a special vote.

University Fellowships

Twenty fellowships, each yielding five hundred dollars but not exempting the holder from the charges for tuition, are annually awarded.

The system of fellowships was instituted for the purpose of affording to young men of talent from any place an opportunity of continuing their studies in the Johns Hopkins University, while looking forward to positions as professors, teachers, and investigators, or to other literary and scientific vocations. The fellowships are given to young men who wish to follow systematically through the year the instructions of the teachers here engaged, and those who are appointed are expected to proceed to the degree of Doctor of Philosophy. The appointments are made not merely in recognition of good work already done,

but as aids and incentives to good work in the future; in other words, the fellowships are not so much honors and prizes bestowed for past achievements, as helps to further progress and stepping-stones to honorable intellectual careers. They are not offered to those who are definitely looking forward to the practice of any one of the three learned professions (though such persons are not formally excluded from the competition), but are bestowed almost exclusively on young men desirous of becoming teachers of science and literature, or of devoting their lives to special branches of learning which lie outside of the ordinary studies of the lawyer, the physician, and the minister.

Each candidate is expected to submit his college diploma or other certificate of proficiency from the institution where he has been taught, with recommendations from those who are qualified to speak of his character and attainments. But this is only introductory. He must also submit, orally or in writing, such evidence of his past success in study and of his plans for the future, together with such examples of his literary or scientific work, as will enable the professors to judge of his fitness for the post. The examination is, indeed, in a certain sense competitive, but not with uniform tests, nor by formal questions submitted to the candidates. First, the head of a given department considers, with such counsel as he may command, the applicant's record. The professors then collectively deliberate on the nominations made by individual members of their body. The list upon which they agree, with the reasons for it, is finally submitted by the President of the University to the Executive Committee, and by them to the Trustees for final registration and appointment. By all these precautions the highest results which were anticipated have been secured. A company of most promising students has been brought together, and their ability as teachers and scholars has

been recognized by calls they have received to permanent and desirable posts in various parts of the country.

The number of applications for fellowships has hitherto been very large, and it may have happened that some candidates have failed of appointment who were really superior to those selected. But if so, this has resulted from the fact that a considerable number of applicants have each year forwarded to the university merely testimonials from their instructors, without examples of their own work, and, in consequence, the professors, from want of adequate knowledge, have possibly passed over candidates who may have been in the highest degree meritorious.

The applicants are notified of the result by means of a printed list of the successful candidates.

The absence of candidates from Baltimore has been no bar to their appointment, in cases where adequate evidence of their claims has been presented; but it is obvious, from the nature of the case, that graduate students residing in Baltimore must have better opportunities than others of making their powers known to the appointing board, and during the last few years the number of persons appointed, who had not previously been resident here, is very small.

Regulations

1. The application must be made prior to May 1, in writing, addressed to the President of the University, and he will refer the papers to the Academic Council, by whom the nominations will be made to the Board of Trustees, at their meeting in June. There is no prescribed form of application.

2. The candidate must give evidence of a liberal education, such as the diploma of a college of good repute; of decided proclivity towards a special line of study, such as an example of some scientific or literary work already performed; and of upright character, such as a testimonial from some instructor.

3. The value of each fellowship is five hundred dollars. The holder is not exempt from the charges for tuition. In case of resignation, promotion, or removal from the fellowship, payments will be made for the time during which the office shall have been actually held.

4. Every holder of a fellowship will be expected to perform such duties as may be allotted to him in connection with his course of study, to act when called upon as an examiner or as moderator in the examination room, to give all his influence for the promotion of scholarship and good order, and in general to co-operate in upholding the efficiency of the university, as circumstances may suggest. He must reside in Baltimore during the academic year.

5. He will be expected to devote his time to the prosecution of special studies (not professional), under the direction of the head of the department to which he belongs, and before the close of the year to give evidence of progress by the preparation of a thesis, the completion of a research, the delivery of a lecture, or by some other method.

6. He may give instruction, with the approval of the President, by lectures or otherwise, to persons connected with the university, but he may not engage in teaching elsewhere.

7. He may be reappointed at the end of the year, but only for exceptional reasons.

8. Usually not more than two fellows will be appointed in any department of study.

9. As these fellowships are awarded as honors, those who are disposed, for the benefit of others, or for any other reason, to waive the pecuniary emolument, may do so, and still have their names retained on the honor list.

Adam T. Bruce Fellowship

This fellowship was founded in 1887 by the mother of Adam T. Bruce, Ph. D., late fellow and instructor in this university, as a memorial of her son, and is awarded annually. It is bestowed by the appointing board upon the candidate whom they consider most likely to promote biological science, and especially animal morphology, by original research. The stipend is the income of the Adam T. Bruce Fellowship endowment of ten thousand dollars. Preference is given to those who have already held fellowships in the Johns Hopkins University.

The electors consist of the President of the University, the chief instructor in animal morphology, the chief instructor in animal physiology, and a non-resident member annually chosen by the resident electors.

REGULATIONS

Candidates for the Bruce Fellowship must make application, in writing, to the President of the Johns Hopkins University before the first of May. They must forward to the President, at the same time, such evidence of their qualifications for appointment as they desire to be considered by the electors, who may require any candidate to appear before them in person.

The Bruce Fellow shall devote his time to study and research in biology at a place approved of by the President of the university, and he shall, during the month of February in the year of his tenure of the fellowship, send to the President a written statement of the scientific work accomplished by him since his appointment.

The tenure of the fellowship shall commence on the first of September.

Two hundred and fifty dollars shall be paid to the Fellow on October 1, and the remainder at convenient intervals during the tenure of the fellowship.

The holder shall not be more than thirty years of age at the date of his election.

The Bruce Fellow may be re-elected, but not oftener than twice, and he shall be exempt from charges for tuition.

The electors shall have the power to declare the fellowship vacant, if its holder prove, in their opinion, unworthy; and no further stipend shall be paid to such person.

WILLIAM S. RAYNER FELLOWSHIP

The Rayner Fellowship was founded by Mrs. Bertha Rayner Frank and Mr. Albert W. Rayner, of Baltimore, to perpetuate in this university the name of their father, Mr. William S. Rayner, who had made unusual attainments in the Hebrew language and was interested in the promotion of Semitic studies. The gift amounted to ten thousand dollars, and the income is available for a fellowship, which is bestowed annually by the Academic Council upon an advanced student in the department of Semitic Languages.

SCHOLARSHIPS

University Scholarships

For the encouragement of scholarship among those who have taken the baccalaureate degree and wish to continue their studies here, a number of University Scholarships are annually bestowed, as stated below:

1. Fifteen scholarships are open about the first of January to graduates of this or of other institutions, who have been studying here during the previous part of the session. Those who wish to be candidates must make formal application to the President, stating where they have been previously trained and what studies they have pursued in this university. He will appoint a committee of five to consider the applications, and, with the aid of such evidence as may be obtained, to make nominations to the Board of University Studies.

2. These scholarships entitle the holders to free tuition and are tenable for one year. They do not carry exemption from laboratory fees.

3. They are awarded as honors, and those who are disposed, for the benefit of others or for any other reason, to waive the pecuniary emolument, or who are desirous of studying elsewhere, may do so and still have their names retained on the honor list. Those who receive the emolument will be expected to pursue their studies exclusively in this university.

4. The Board will reserve appointments, if worthy candidates do not offer.

Hopkins Scholarships

In the will of the founder of this university, his Trustees are requested to "establish, from time to time, such number of free scholarships in said university as may be

judicious, and to distribute the said scholarships among such candidates from the States of Maryland, Virginia, and North Carolina, as may be most deserving of choice, because of their character and intellectual promise, and to educate the young men so chosen free of charge."

Forty-six such scholarships, entitling the holders to free tuition, are now offered to students from the three States named.

Students can be recognized as candidates only when actual residents of the State from which they desire to be appointed, during at least the year next preceding their enrolment in the university. If the appointing board is not sure as to the legal residence of any candidate, the point in question shall be determined by the Executive Committee of the Board of Trustees.

These scholarships are all bestowed for merit, and are tenable for the year subsequent to the appointment, the holders being re-eligible.

Successful candidates who are disposed, for the benefit of others or for any other reason, to waive the pecuniary emolument, may do so, and still have their names retained on the honor list. The scholarships may be forfeited, because of frequent or prolonged absence, defective scholarship, or unworthy conduct.

Scholarships made vacant by resignation, by forfeiture, or by the non-appearance of worthy candidates at the regular times of selection, may be bestowed by the appointing board, at their discretion, upon other candidates who are found worthy, provided that the principles of this foundation are not departed from.

Holders of scholarships are not exempt from laboratory fees.

Hopkins Scholars from Maryland

These scholars are appointed by the Board of Collegiate Studies, in accordance with the following regulations:

1. Four scholarships are open, at the beginning of the session, to those who have just completed their matriculation examination, and who stand best in a subsequent special examination in Mathematics, Latin, and Greek (or French and German), as required for matriculation.

2. Four are awarded in June to matriculated students whose records in the studies of the first year are most creditable. By "studies of the first year" is meant either the studies laid down for the first year in one of the regular groups, or such other studies, equivalent in amount, as may be approved of by the Committee on Scholarships and Honors.

3. Four are awarded for excellence in the studies of the second year, upon the same terms as in the case of the first year, provided that the candidate shall have absolved the "studies of the first year" as above defined.

4. Four are awarded for excellence in the studies of the third year upon the same terms as in the case of the second year, provided that the candidate shall have absolved the studies of the first and second years.

Hopkins Scholars from North Carolina and Virginia

Fifteen Hopkins Scholarships are awarded by the Academic Council to students from Virginia, and fifteen to students from North Carolina, who have already received a creditable baccalaureate degree or its equivalent. In case the entire number of scholarships is not required for graduate students, those that remain may be awarded to undergraduates, in the order of their merit. Applications, in writing, must be filed at the President's office prior to June 1.

WASHINGTON SCHOLARSHIPS

The Trustees offer to residents of the District of Columbia two scholarships, yielding free tuition. These, like the Hopkins Scholarships, are awarded to undergrad-

uate students for merit, do not carry exemption from laboratory fees, and are tenable for one year, the holders being eligible for re-appointment.

Woodyear Scholarships

Mrs. William E. Woodyear, of Baltimore, gave to the Trustees in 1893, as a memorial of her husband, the sum of ten thousand dollars, in order to provide for the annual bestowal of five scholarships, of one hundred dollars each, under such conditions as the Trustees may from time to time prescribe. At present they are awarded to young men who are known to the President of the University to be in need of pecuniary assistance, and who, at the same time, have given evidence of character and ability.

Maryland Scholarships

Twenty "Maryland Scholarships" are annually offered to residents of this State. They entitle the holders to free tuition, but do not carry exemption from laboratory fees. The scholarships are for the benefit of all parts of the State, and, accordingly, not more than one-half the number are awarded to residents of the city of Baltimore, and not more than one-half to those who are already members of the university. The appointing board consists of the President of the Board of Trustees, the President of the University, and the Dean of the College Faculty. The usual entrance examinations must be passed by the candidate, who must make application in accordance with a prescribed form; this must be accompanied by testimonials certifying to the applicant's character and pecuniary need. Students already in residence must apply before June 1; newly-entering students about October 1.

PRIZES

The Henrico Medallion

This prize is the gift (made in 1902) of the Colonial Dames of America, Chapter I. and consists of a copper medallion bas-relief commemorating the foundation of a university at Henrico, in Virginia, in the year 1619. It is bestowed in alternate years upon a graduate or student of the Johns Hopkins University, not more than ten years after his receiving the degree of Bachelor of Arts, as a recognition of special excellence in early American History.

The Tocqueville Medal

The Tocqueville medal is annually given to the Johns Hopkins University by the Baron Pierre de Coubertin, of Paris, and is offered by the university to that student who shall have written the best essay on some subject illustrating any phase of French History, political or social, from 1815 to 1890, or a review of some important historical work published in France since 1890. The medal is given in honor of the illustrious Frenchman, Alexis de Tocqueville (1805-1859), author of the well-known historical and political studies, "Ancien Régime" and "Démocratie en Amérique." The conditions of the award may be learned at the office of the University.

The Sylvester Prize

The Sylvester Prize is the gift of several Baltimore gentlemen, and is offered to advanced students of mathematics as a reward for original research. It consists of a medallion likeness of Professor J. J. Sylvester, the first professor of mathematics in this university.

The Severn Teackle Wallis Memorial Prize

This prize was established in 1905 by the Wallis Memorial Association of Baltimore. The conditions of the award, as stated by the donors, are as follows:

"When, in the judgment of the Board of Trustees of the university, a money prize of not less than fifty dollars in amount can advantageously and worthily be awarded out of the income of the fund to a student of the undergraduate, or the graduate, department of the university, for an essay on some subject connected with Spanish Literature or History, or for some original work done in either of said subjects, then the Board of Trustees shall make such award, said prize to be called the Severn Teackle Wallis Memorial Prize."

The Adams Prizes and Medal

The Trustees set aside annually the sum of fifty dollars for the purchase of books to be awarded as prizes to the undergraduates who are successful in the annual public debate between members of the two higher classes. These prizes, which were originally offered by the late Professor Herbert B. Adams, are known as the Adams Prizes.

A gold medal known as the Adams Medal is also awarded annually to the best speaker in the public contest participated in by members of the second-year undergraduate class.

TUITION FEES AND EXPENSES

A

In the Philosophical Department

Tuition Fees

The charge for tuition is one hundred and fifty dollars per annum, payable at the Treasurer's office in semi-annual instalments, October 1 and February 1. There is no extra charge for instruction in any department of study, or for the use of the library and reading-room. A gymnasium fee of five dollars per annum is charged to every undergraduate during his residence in the university, and the money thus acquired is devoted to defraying the expenses of the University Athletic Association. Graduate students who use the gymnasium are also required to pay this fee. Fees are charged, as below stated, for registration, for material consumed in the laboratories, and for diplomas.

No deduction is made at the Treasurer's office because of absence for a period of less than half a year, or because a student gives only a part of his time to study, or because he belongs to but one class. Prompt payment of fees is required.

Registration Fee and Caution Money

Every student is required at entrance to pay a registration fee of five dollars and deposit ten dollars as caution money, the latter being repaid to him when he leaves the university, if there are no charges against him.

Fees for Limited Attendance

Persons engaged in other pursuits—such as clergymen, lawyers, physicians, teachers,*—*who are able to give only*

*Teachers in the public and private schools of Maryland—*who are not candidates for a degree and who are prepared to follow courses corresponding, in general, to those offered to under-

a portion of their time to study, and who are prepared to follow graduate courses, are permitted to attend certain courses of lectures, not exceeding five weekly, or to work in a scientific laboratory (without attendance on lectures) at such times as may be arranged with the Director thereof, on the payment of fifty dollars for the year, besides the registration fee and caution money. For a course of lectures not exceeding five weekly, with accompanying laboratory work, the fee is seventy-five dollars per annum.

Laboratory Charges

In Chemistry: For undergraduates and for graduates who take Chemistry as a subordinate subject, twenty-four dollars a year; for graduates and special students following Chemistry as their principal subject, thirty-six dollars a year. For a half-year, one-half of these amounts.

In Physics: For students who work two afternoons a week, twenty-four dollars a year; for those who take Physics as their principal subject, thirty-six dollars a year. For a half-year, one-half of these amounts.

In Biology: For undergraduates and for graduates who take Zoology or Physiology as a subordinate subject, twenty-four dollars a year; for graduates and special students following a biological science as their principal subject, thirty-six dollars a year. For a half-year, one-half of these amounts.

In Geology: Ten dollars a year; for a half-year, one-half of this amount.

Students taking courses in Geology are expected to take part in a series of excursions, and to pay their personal expenses, which will, however, in no case amount to more than $14.00.

---

graduate students,—may be received on the payment of ten dollars for a course of one hour a week, twenty dollars for a course of two hours a week, etc., as explained in a special circular to be obtained from the Registrar of the University. Such persons will not be regarded as members of the University.

In all the laboratories, a charge is made for breal and for apparatus not returned in good condition.

Fellows by Courtesy and others who have the privil of guests in the various laboratories, are expected to the usual laboratory charges.

Doctors of Philosophy of this university who desir remain for a time in the university after having recei their diplomas, may do so without charge for tuition. they are required to pay the usual laboratory charges.

Exception to the foregoing charges can be made onl the written request of the Director of a laboratory, proved by the President of the university.

Graduation Fees

The graduation fees are as follows, payable before delivery of diplomas:

Doctor of Philosophy, ...	$10.00
Master of Arts,*	10.00
Bachelor of Arts, ...	5.00

tion money is required from each student at the time of his enrolment. The caution money is repaid to the student when he leaves, if there are no charges against him. Special charges are made for breakage and for damage to apparatus.

Payment of bills may be made at the office of the Registrar in the Physiological Building, which is open from 9 a. m. to 5 p. m., or at the office of the Treasurer of the University, on North Howard Street, which is open daily from 9 a. m. to 4.15 p. m.

The fees required of graduates of medical colleges who desire to follow special courses in medicine, are stated in detail in the annual catalogue of the medical department.

Living Expenses

The university has no dormitories or other living accommodations. Students may find comfortable homes in the vicinity,—in boarding houses or with families. The price of board ranges from three dollars and a half a week upward, and rooms from one dollar and a half a week.

Lists of desirable places are kept by the Secretary of the university branch of the Young Men's Christian Association and by the Registrar of the medical department.
